

FAMILIAR THINGS

We cling to old familiar things. Old dishes that our mothers had. Old chairs and rugs and patchwork quilts.

A jack-knife that belonged to Dad; They seem to speak in quiet tones. A love that is for us alone.

How dear a cup of plate may grow When loving hands have brought it there. And still it stays when they are gone.

A bit of vine she planted there. Grows on beside the kitchen door. A sunny window that she loved.

When hope lies dead. When hope the dead within the heart. We think last looks or words impart.

"To speak when one would almost be. To walk when one should wish to sleep. And wait to agony.

Yet such the lot by thousands cast Who wander in this world of care. And bend beneath the bitter blast.

But Nature waits her guests to greet. Where disappointment cannot come. And these guests with unweary feet.

Lightning strikes the dead of earth. What is lightning? This question is quelling the jittery herd of J. B. Chambers.

Monday afternoon the cattle—a score of these—were lying under a tree near the barn. When the storm came up, contrary to their usual custom of going to the barn-shed for protection.

It was interesting to not the efforts made by the cattle to solve the phenomenon. One at a time or in a bunch they would come back to the spot to smell the ground and examine every foot of earth.

When the world is dark and uninviting there is something out of gear with anatomy. If you could only see it, there are the same colors in the rainbow as there were for Noah.

The sun shines with the same tawny haze as it does in Hesperus. When the clouds have silver lining and the stars twinkle throughout the night.

But the trouble is we often can't see them. There are a thousand smokes from the great busy world that obscure the sun. These are countless smokes that hide the starlight.

They obscure the light in the heavens above because the industry of mortal change is so busy on the earth below. The more there is of it the greater the man-made things that turn our minds from the great nature-produced glories.

BEAN VALUABLE IN REDUCING

By Betty Barclay

To reduce or not to reduce is a question to which plain common sense supplies the best answer. Over-weight can be dangerous and is almost always unattractive.

One should try to lose twenty or twenty-five pounds in a week or a month. First of all the should consult her physician. Then she should reduce gradually, cutting down moderately on the total amount of food.

In the planning of any reducing diet due attention must be paid to the regulary foods—bread, celery, lettuce, cabbage, and other leafy vegetables—that provide the bulk the system needs to function properly.

The quality of negotiating them is frequently a sallow skin, lack-lustre eyes, and the appearance of wrinkles and pimples. That is far too high a price to pay, especially when only a little thought and care are required to avoid paying it.

Beans, in addition to supplying bulk, provide vitamin B for muscle tone, and iron needed for good red blood. It possesses the added virtue of being capable to inclusion in the diet in a wide variety of appetizing dishes.

Beans should be soaked overnight in cold water. Add 1/2 cup sugar, 2 tablespoons shortening, 1 egg (well beaten), 1/2 cup milk, 1/2 cup brown sugar, 1/2 cup corn meal, 1/2 cup flour, 1/2 teaspoon salt.

4 1/2 teaspoons baking powder, 1/2 cup milk, 1/2 cup brown sugar, 1/2 cup flour, 1/2 teaspoon salt, 1/2 cup shortening, 1/2 cup corn meal, 1/2 cup flour, 1/2 teaspoon salt.

Orange Jambalaya: 1 package powder for orange junket, 1 pint milk, 1/2 cup brown sugar, 1/2 cup flour, 1/2 teaspoon salt.

Like sides of dessert glasses with lady fingers. Dissolve the powder for orange junket in lukewarm milk. Stir and pour into dessert glasses; let stand in warm room until firm.

NEW SPECIAL STAMP: Canada is issuing a new postage stamp to commemorate the centenary of the conquest of the Atlantic by steam.

When the world is dark and uninviting there is something out of gear with anatomy. If you could only see it, there are the same colors in the rainbow as there were for Noah.

The sun shines with the same tawny haze as it does in Hesperus. When the clouds have silver lining and the stars twinkle throughout the night.

A VENERABLE ORDER

Order of St. John of Jerusalem Has a History Dating Back Nearly Nine Centuries

The Order of St. John of Jerusalem, which was founded by King Henry II of England in 1113, is one of the oldest orders in the British Empire.

It is known that its first charter from a royal authority was issued in 1113, when King Henry II of England issued a charter to the knights of the order.

After the loss of Malta, the ordinary command of the order was transferred to the majority of the three existing knights, who were based in Paris.

Queen Victoria granted a Royal Charter reconstituting the British order with a constitution similar to that of the original order.

OLD NEWSPAPER FOUND: Copy of Montreal Gazette Found in Year 1827

While taking the back from an old mirror that had hung on the wall in a house in London, a copy of the Montreal Gazette, dated 1827, was discovered.

One of the principal reasons on the part of the British Government for the restoration of the order was to provide a means of raising money for the relief of the poor.

Scientists are conducting an unusual experiment in Turkey, which they hope will lead to the discovery of an "age" of the Michigan Academy of Science.

TOMMY'S UNIFORM

Comfort and Utility, Rather Than Military Splendor, in British Infantryman's Working Clothes

Common sense and comfort have scored another signal victory. The British infantryman's uniform is becoming a thing of the past.

In the place of the old tight checkered collar, the tunic will have an open neck, like that of a shirt.

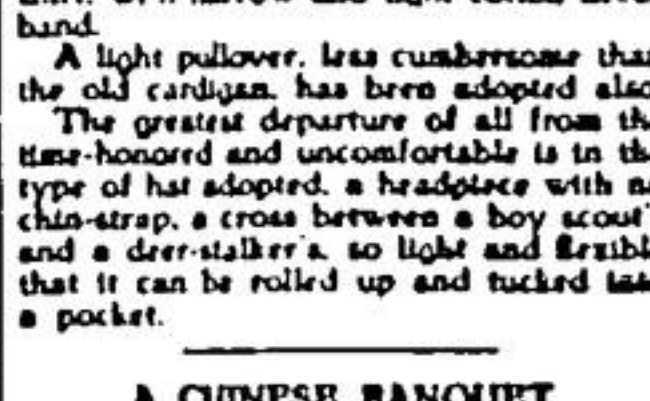

The new uniform will have an open collar, like that of a shirt, and a double breast at the back, to make for greater freedom of movement.

ONTARIO APPLE CROF

This Season's Policy of Inspection by Experts

During the last session of the Federal Parliament, the Department of Agriculture was referred to as the cog of one huge machine, the smooth, systematic interlocking of its mechanism being held up as an example to be followed.

On that date, the Provincial Fruit Branch of Ontario and the Dominion Fruit Branch will join forces in the inspection of the apple crop of Ontario in connection with Regulation No. 1 (Export) of the Destructive Insect and Plant Act.

The new uniform will have an open collar, like that of a shirt, and a double breast at the back, to make for greater freedom of movement.

IRON IN ENGLAND. A \$1,300,000 plan to mine iron ore deposits in Northamptonshire, which total no less than 500,000,000 tons is announced by the British Iron and Steel Corporation. The scheme is described by its sponsors as the most important development in the steel industry for a generation, and a great constructive effort to revive British trade. WORK IS EASIER NOW FAT HAS GONE. "I was so stout about 11 months ago," a woman writes, "that I became a burden to myself. Then muscular rheumatism set into my joints, and I had to go on sticks for some time. Then I started to take Kruschen Salt, and I am overjoyed with the results. I have derived from them, honestly, I had no idea one could feel so different in such a short time. Since taking Kruschen, I have lost nearly 25 lbs. of superfluous fat. I can now turn about as well as when I was a cook, work, and attend to seven growing children."—Mrs. O. H. Kruschen does not aim to reduce by rushing food through the body; its action is not confined to a single part of the system. It is a tonic influence upon every organ of elimination, every gland, every nerve, every vein. Gently, but surely, it rids the system of all fat-forming refuse, of all poisons and harmful acids which give rise to rheumatism, diabetic disorders, and many other ills.

MILIONS OF TREES. Prairie Provinces Greatly Changed in Last Three Decades. Since the Canadian Government instituted a tree-planting division in 1901 under the administration of the Department of the Interior (since transferred to the Department of Agriculture), a total of 17,259,166 trees have been planted free to farmers in the Prairie Provinces. Of this total 115,100,000 were deciduous and 5,159,166 were coniferous or evergreen. Sufficient seedling trees to establish shelter belts have been sent out from the Canadian Government Station at Indian Head and Saskatchewan, Saskatchewan, to as many as 6,000 farmers, every year for the past thirty years or an average of about 4,000,000 trees per year. In addition to the free distribution, millions of trees have been sold in the Prairie Provinces by owners of private nurseries. The result is that many thousands of prairie farm homes, which formerly stood out on a somewhat bare and unrelieved landscape, are now sheltered by miles of tall trees, which not only serve as windbreaks, but help to conserve the moisture and make a decided contribution to the attractiveness of the surroundings.
