THE WINGS OF WILD GETSE The very world has adopted the phrase. "billy as a goose," but, tike

many other things we accept without investigating their claims to truth. this statement is very far from the roup are almost sure to follow. Dur-A good to a decidedly wise bird; if not why did a certain one cover her eggs with hay to keep them warm when the weather was cold and stormy though the did not take this precaution when it was not? In some mysterious way these pertain quite suitable during the cold months.

less voyagers through space know the but when the weather moderates in time when they are to leave their baimy isguons in the sunlands of the Bouth, and travel to the top of the world in the land of the Midnight Bun. On these diary migrations, guided by a wisdom as amazing as it is mysterious, these swift adventurers of the air keep to certain longitudinal routes, from all sections of the country, to arrive at last at a given spot at the ends of the earth. Rising, often at see level, they see their course to take them high above the loftiset ranges, many of whose dawn-kissed preks rise cloud-ward more than three miles. Yet who has ever known of a wild goose coming to tragedy on the shoulders of any hill? On these damling annual flights they cover from six to eight thousand miles, breasting head-winds and storms that would drive the stoutest ship upon the rocks; secepting down the barbed anarchy of gales, lawless as unchained Furies, yet holding. steadily to their course, their tireless pinions beating across the boiling elements for more than thirty hours

alashing wings have driven them forward at a mile a minute, or fully fifty lest for every downward stroke. The best aviators may become bewildered between stations, though they have the assistance of strong tights, and radio connections from the ground every ten minutes; but wild geess never lose their way, and when did one of them ever come to grief in "making a landing?" Through starless, tempest-ripped nights they go to

without rest, while all that time their

their destinations with the dead orrtainty of gravity ttself. Wild geess usually fly in wedge formation, with some old leader at the makes the most of that fact by keeping a piace in the formation where it phere. The less ere are not able to do unis, so change often, while a con-

tinuous honking is kept up to hold Then, by some startling method of understanding each other, they seem to come to a common agreement as to when they should descend for rest and food. When these have been secured in some wide field or island where they cannot be approached by an enemy, they rise once more and pursue thair fourney. pureue their journey.

The old question, "Where do the wild geese go?" has at last been anawered. Por generations it was very much of a mystery, but now the se-cret is well known. Back of all precautions. The parents of the young birds seem to know they are helpless creatures, unable for some time after hatching either to fly, or to escape from their enemies by swimming. This would mean their extermination if they lived close to human centres. Then, wild gress moult once each year, and during that period they cannot get off the ground, and they seem to know that if they were found at such a time along the rivers and lakes near the dwellings of men they would

To make these things impossible they fly to the distant, uninhabited regions beyond the Circle, where the cold waters of the Arctic wash the foriorn shores of northern Russis, near the mouth of the Lens River. Here food is abundant, and uncount-ed millions of wild geese congregate in these places and bring forth their

those key desolations the geese come drifting down the world to the forstless Bunlands again. But they do not congregate into congested centres, as they did during the summer, they are too wise for that, but scatter abroad from Chlifornia to the everglades of Plorida. This wise conduct guaran-

tees their food supply, and insures their preservation. And equally as wonderful is the fact that wild geese have not always gone to the north with the coming of sum-mer. It is certain that, if they lived where men do not, they would remain always by their warm rivers with no thought of seeking safety somewhere else. Cloing to the Arctic, then, something these wise creatures have learned to do to preserve their exist-

how did they know that only place on the globe where they would be completely removed from the possibility of destruction at the hands of men was the treeless waste at the top of the world?

## Women Buy 80 per cent. of all Merchandise Sold by Retailers.

It is calculated that women buy fully 80% of all merchandise sold by retailers, and influence the purchase of things they do not buy personally so that they control fully 95% of all purchases made. .

Women study their market just as an Investor in securities studies the fluctuations of financial markets. Women keep in close touch with the "price current" as it affects their buying. They "chart their course" before buying by reading the advertisements of their local merchants (or of distant city stores if their local dealer is not aggressive.) Place your message for them where it will reach them in their homes-in your local newspaper !

Hoard, will never be caused by wellfinished cattle. "In a survey of the left-overs, I have found that the good type wellfinished stocker, weighing about 600 pounds, has been allowed to follow the finished animal to the abbatoir, when it should have been returned to the feed lot. Too many in-between are being taken back to the farm. These are often in rough condition. Illbred and, in many cases, ill-fed. Many of them should never have liv-

ed beyond the well stage. "With the good abbatoir, and in-betweens being returned to the a question of time before all sales promotion efforts of the past twenty years, will be in vain. Statistics show we are feeding about 40 per cent less cattle this year than last, with supplies cleaning up and prospects of better prices. It would seem that farmers, having feed to do so, should

feed up all good stockers.

Washir Crus Resert Thousands of barrels of apples were damaged by a severe frost, states a report from Peel County, and as a result the cider presses are running to capacity. Most farmers in North Simone will be rather short of room point of the line. This divides the this winter as the crop would average pasture in many districts will result in cattle going into winter quarters in poor condition. Bugar best harvest in Kent County is about completed and has been delivered to the factory in splandid condition. Lincoln seports that condition of fall wheat has saldom been better than at present. In Prontenac the farmers have a big surplus of livestock and a large number will have to be sold owing to shortage of feed. In Temiskaming this has been the finest fall the farmers have had for several years for completing

the season's work. Harvesting and threshing were over in good time and farmers have had ample time to get their fall plowing done. Illata for the Poultryman ed according to the Dominion Poultry

Husbandman: See that the pullets have dry and bright quarters. Have the houses clean and tary without draughts. Give a well balanced ration be sure to give enough. Don't forget the green feed, prefer ably clover or alfalfa. If you have milk give the pullets what they will take. Keep the laying pullets or those the O.A.C.
