VACATION PICTURES

Land of sea offers unlimited opportunities for snapshotting.

WITH the arrival of really warm summer weather, beautiful trees and flowers, we begin to think in earnest about outdoor life and vacations. I suppose one could go on a vacation without a camera but that would be like trying to sail a boat without a rudder. To say the least it would seem that something important was missing.

When planning a vacation you should look forward to the snapshots you are going to get, for on your return to home and work, and in later years when your trips become fond memories, you can always turn to your snapshots and enjoy your vacations over and over again. Snapshots pay dividends on your vacation investments in continued pleasure long after your return.

There is one important thing to keep in mind in vacation snapshotting, that is the variety of light conditions you may encounter in your travels. Picture taking might well be classed in four groups, according to the exposure time in the foreground. Number three:—Nearby portraits in the open shade

LET THE SUN WORK FOR YOU

Watch for unusual artistic pictures which snapshots of outdoor scenes.

MANY of you who want to take your photographs seriously and get some really attractive artistic pictures would probably like to have some further information on proper lighting in taking snapshots.

The lighting of the subject has so much to do with securing that quality often referred to as "atmosphere" in a picture. There are a number of ways in which a photograph may be given apparent depth, or third dimension. Taking pictures when there are long shadows, getting a reflection in the foreground, using strong side-lighting or back-lighting, and timing the exposure just right so that the detail of objects in shadow is not blocked out, are precautions which contribute much to the desired effect.

Suppose we consider each of these separately. Shadows, thrown in long drawn-out spots across walls and walks, makes one feel, more than anything else, that he is looking into a picture instead of looking on a flat piece of paper carrying images of recorded objects. The foreground should be well broken up with shadows so that there is not too much contrast between it and the rest of the picture.

When a body of water can be included as part of the foreground, then there are really wonderful opportunities for adding depth. The reflection will carry one's attention back and away from the foreground and into the picture—and lead to
