

Single Goal Stood Between Juniors and Group Championship

Orangeville Victorious on Round by 5-4 Score—Goldham's Squad Gave Their Best for Georgetown—1500 Fans Witnessed the Final Game in Orangeville.

The greatest crowd in nine years witnessed the Georgetown-Orangeville final up in the Dufferin town last Thursday night. The Georgetown team had a large following, many travelling by bus and car. It was a great night for both teams, and especially for the home team for they came out on the right side of a 3-1 score.

The Orangeville Greenshirts did what a lot of local fans thought impossible. They battled every inch of the way and finished Group No. 1 champions. Losing goalie Silk against the final here 3-2, the Orangeville team managed to overcome the one goal lead and go to the fore with a goal to spare. Just one goal stood between your favorites and the group championship.

While the game in itself was not on a par with the first set to here, it was nevertheless exciting, jammed with thrills, fast, wide-open hockey. The last nerve-wracking ten minutes tried desperately to tie up the round and did everything but score time and again as their rushes proved effective had the crowd nearly crazy.

Goalie Silk of Orangeville turned in one of those rare super-performances that mark the odd junior final game when a goalie defies opponents, the rink, breaks and even the fans, in keeping his Citadel clear of the elusive puck. In the first and last ten minutes of the game, but the Orangeville lad was in there with both feet and turned in a marvellous performance. If they are picking anyone up in the Dufferin town as winning the championship, don't forget goalie Silk. I hear someone saying, "What about Leach and Gillespie." Yes, what about them—they are supposed to be good. Just as Kemshead and Binsell who saved the day. But it was Silk who saved the day.

But the Georgetown team never quit trying; they gave all to bring the championship to Georgetown, and many still think, including the writer, that they are the better team. However, it is goals that count, and we will be out next year, again battling for the championship. In the meantime we wish Orangeville all kinds of luck in the future games. Orangeville secured the first goal of the evening and tied up the round in the first period, when Gillespie scored half way through the period. It was a nice solo effort that split the defence and the puck caught in the net high up in his favorite corner. The game continued at a fast pace with Georgetown carrying the play to the Orangeville goal-mouth time and again. They kept up an almost steady bombardment, including a penalty shot on which they failed to score.

The second period was a hectic affair for both teams, and kept the fans in an uproar all the way. Goals came fast in this period with Orangeville scoring twice and Georgetown once. Leach took a pass from Hopkins for the first one and seconds later McMurchy got Georgetown's only counter of the game. Still a minute later Leach got his second goal of the evening, the final and winning goal of the game for there was no scoring in the last session. This goal made the score 3-1 on the game and 5-4 for Orangeville on the round.

The game was exceptionally clean and both teams showed good sportsmanship, with Georgetown sending up three cheers for the winners. There were only two penalties all evening—Curry for Orangeville in the third period and Binsell for Georgetown finished the game in the penalty box. Leach and Gillespie starred along with Silk for the winners, while Burrows, Goldham and Soloski played well for the losers although every

player did his best under the terrific strain. Orangeville—Goal, Silk; defense, Walker, Curry; centre, Hopkins; wings, Leach, Gillespie; subs, Cooney, Patterson, Jeffers, Harlock. Georgetown—Goal, Burrows; defense, Binsell, Goldham; centre, McMurchy; wings, Kemshead and Stockford; subs, Hore, Schenk, Green and Soloski. Referee—D. Brush, Milton.

HEALTH

A HEALTH SERVICE OF THE CANADIAN MEDICAL ASSOCIATION AND LIFE INSURANCE COMPANIES IN CANADA

APPENDICITIS

In one year appendicitis was responsible for over fourteen hundred deaths in Canada. More people died from appendicitis alone than from typhoid fever, measles, scarlet fever, whooping-cough and diphtheria all put together. Traffic accidents are of much too frequent occurrence, but the fatalities arising out of such accidents are fewer than those due to appendicitis.

The City of Philadelphia has given particular attention to this disease. For five consecutive years, a close study has been made of all appendicitis deaths occurring in that city in order to determine the factors which contributed to the fatal outcome. At the same time, the Department of Public Health carried on an educational campaign in the hope of improving conditions. We should learn from the experience of Philadelphia in order that we may profit by it, and so the findings of the Philadelphia study are presented to our readers.

Patients admitted to hospital within twenty-four hours of the onset of symptoms had a mortality of less than 2 per cent; between twenty-four and forty-eight hours, the mortality rose to over 4 per cent; when the delay was between forty-eight and seventy-two hours, it was nearly 6 per cent; after seventy-two hours, it reached over 8 per cent. From these figures summarizing the experience of a large city for five years, it is shown so clearly that everyone may understand that the percentage of deaths rises in ratio to the delay in securing proper treatment.

There were over 18,000 cases studied. Of the total, approximately 3,000 did not have a laxative and 1 in 57 died; over 5,000 were given a laxative and 1 in 18 died; 729 had more than one laxative and 1 in 9 died. Those who read these figures will surely never forget that the giving of laxatives to man, woman or child who has a pain in the abdomen is the most dangerous thing which can be done.

When there is pain in the abdomen nothing should be taken by mouth, and, above all, never a laxative. Pain which persists is usually serious, and the sooner the patient is under proper care the better, because if the condition is appendicitis, delay is dangerous, as has been clearly shown by the Philadelphia experience.

Questions concerning health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered personally by letter.

SAYS LOBE OF INDIANS AHEAD OF SCIENCE

The modern scientist in his unceasing quest for knowledge might do well to study the North American Indian, according to Aaron Laidlaw, M.D., L.S.M., East Chinguacousy, ranked as one of Ontario's foremost botanists and agriculturists.

Close to nature through his mode of life, the Indian was in a position to learn much that is still unknown to us, Mr. Laidlaw believes. "The Indians knew the value of sun-bathing centuries ago, and practiced it widely as a medicine. The Indians of the West, in particular, realized its value, and carrying the idea still further, they bathed in the sand on which the sun's rays had fallen. All this they learned through experience centuries ago, and it is only within the last few years that our scientists and doctors have begun to practice the sun-ray treatment. In marked contrast, the popular idea of 200 or 300 years ago was to carefully shut a sick patient in a room in which no sunlight was allowed to fall or any fresh air to enter.

Mr. Laidlaw pointed out that it was only comparatively recently that the scientist began to hazard a guess at the existence of a "seed year" when all vegetable matter reproduced in particularly large quantities. The Indian appreciated this fact centuries before the arrival of the white man, and, sensing the importance of the seed year to him, gave special thanks to Mother Nature, he declared.

The belief of the Indian, that weather could be foretold from the flight of birds and the action of animals, may some day be confirmed by science, Mr. Laidlaw believes. He points out that some of the apparently superstitious beliefs were backed by plain common sense and by scientific facts. Assafetida, the nauseous drug worn in amulets as a charm against the ague and malaria, was actually efficient against malaria; at least, Mr. Laidlaw pointed out.

"It is certainly as efficient as they believed, although they never knew the reason for its virtue. The explanation was simple. Malaria was carried by mosquitoes, although that was unknown in those days, and the mosquitoes didn't like the odor of the drug."

At present lying in Peel Memorial Hospital, in Brampton, recovering from a serious illness, Mr. Laidlaw has been experimenting for over forty years in search of new types of fruits, grain and flowers, on his farm here. His name may go down in history as the developer of a type of potato and a new kind of alfalfa particularly adapted to the soil of the Lake Ontario counties. Both are being tested at the Ontario Agricultural College at Guelph at the present time.

One variety of potato which he developed, in a recent competition against the best produced in the world, defeated all comers with a yield of 212 bushels to the acre. Two other varieties which he brought forward were also well up in the competition.

He also has to his credit the development of several rare varieties of peonies, which are widely admired by flower lovers during the summer months.

Never judge a person by his outside appearance. A shabby old coat may enclose a newspaper publisher while a man wearing fine clothes and sporting a gold-headed cane may be a delinquent subscriber.

CLEARING ESTATE AUCTION SALE!

FARM AND EQUIPMENT, LIVESTOCK AND HOUSEHOLD EFFECTS

The undersigned has received instructions from the Executors of the Estate of the late GEORGE WILLIAM LAIRD to sell by public auction on SATURDAY, MARCH 5th, 1938 at the hour of one o'clock in the afternoon on the farm of the late George William Laird, R. R. No. 3, Georgetown, Ontario, all the goods and effects of the late George William Laird, being in part: HOUSEHOLD GOODS AND EFFECTS—High poster bed, iron bed, low wooden bed, 2 old fashioned beds, 2 wash stands, 2 dressers or chests of drawers, 3 small tables, drop leaf table, extension table, 3 kitchen work tables, 2 large kitchen cupboards, book-case, writing desk, organ, stuffed bird case, 2 couches, 3 rocking chairs, 10 to 12 kitchen chairs, coal-oil stove, kitchen range, sewing machine, rag carpet, union carpet, quantity of pictures and miscellaneous other articles.

Calling All Subscribers In Arrears

As March is the end of our business year, we are anxious that all Subscriptions owing on the Herald be settled or arranged for by that date. Up to the present a large number of our subscribers have responded to our request and we thank them. However, there are still a large number in arrears, and we must have the money due us if we are going to stay in the newspaper business these days.

Our mailing lists have been corrected to Feb. 25 and once again we ask you to kindly LOOK AT THE LABEL ON YOUR PAPER.

Thanking you in anticipation of your favor.

Yours very truly,
J. M. MOORE, Publisher.

POPULATION OF WELLINGTON

Residents of Guelph constitute more than one-third of the population of the County of Wellington, according to figures for 1936, issued by the Ontario department of municipal affairs. Total population of the county was 57,329, of whom 21,465 resided in Guelph. Of the remaining 35,874, 24,918 resided in townships, and 10,956 in towns and villages. There are 56 persons to the square mile in the county, the figures revealed. Wellington has one city, Guelph; three towns,

Mount Forest, Harriston and Palmerston; six villages, Erin, Fergus, Elora, Arthur, Drayton and Clifford; and twelve townships, Erin, Eramosa, Guelph, Puslinch, West Garafraxa, Nichol, Pilkington, West Luther, Arthur, Minto, Peel and Maryborough.

One of those slightly city women was visiting in the hills of New England. She—"This place has so many odd and peculiar people."

Native—"Yes, but most of them go home by the first of September."

Farmed

A farmer was losing his patience temper trying to drive two mules into a field, and was using strong language when the local parson came by and said: "Don't speak like that to dumb animals."

Farmer: "You are just the man I want to see."

Parson: "And why?"

Farmer: "Tell me, how did Noah get these into the Ark?"
