"SALADA" TEA

FORDSON TRACTOR

NOW ON DISPLAY

The FORDSON tractor has a genuine standard equipment that saves the fuel costs of a racing engine. This fuel-saving feature is just one example of the FORDSON economy. For the FORDSON tractor has a lot of different jobs at low cost. It has been steadily improved with this in mind.

COUNTY COUNCIL

Engineers Report—Request for Road Between Halton and Peel—Corn Borer Inspectors Appointed—Paving Program Recommended—Grants to Highway and Boy Scouts.

The third meeting of Halton county council for 1938 was held in the County Buildings at Milton on Tuesday last with all the members present and the warden in the chair. Following routine business, Mr. Frank Thompson, superintendent for the Children's Aid Society appeared before the council on behalf of a family who were in need of assistance.

Mr. Roy Smith, county engineer, submitted his annual report. The report states that 16 1/2 miles were sprayed with chemicals for the eradication of weeds, the result of which will not be definitely known until this year. If satisfactory the report recommended that a power sprayer of suitable capacity should be purchased and should also be available for townships contemplating weed control. Approximately 100 stop signs were erected during the past year on roads designated by the council. During the year the county assumed control of approximately 12.4 miles of township roads. The winter of 1937 was free from snow, ploughing costs for the year amounting to only \$945 as against \$20,000 for the year of 1936. Erection of snow fences and ice control cost \$1635.00 as compared with \$2650.00 for the previous year. Appreciation was expressed in the report to Mr. C. G. Riddell for his efficient and economical way in which he had taken charge of the snow ploughing operations.

At the afternoon session, Col. G. M. Fitzgerald, commanding officer of the Lorne Scots Rifles addressed the council and outlined the work of the regiment. Representing the counties of Peel, Dufferin and Halton he requested the council to assist in financing the regiment and emphasizing the importance of them for defense purposes, since Canada must now assume control of her own defense measures.

Mr. George Elliot introduced two gentlemen representing the Boy Scout Association, who gave the council interesting information in regard to the work being done by the Boy Scouts along the lines of reforestation. They also requested a grant to help with the good work they were doing.

The Reeve and Deputy Reeve of Chingacousy, interviewed the council with regard to a road between the county of Halton and Peel. In regard to this request it was moved by Mr. Hall, seconded by Mr. McEwen that the council recommend to the Department of highways the addition to our county system of this road and that a by-law be prepared for the next meeting.—Carried.

Mr. Smith addressed the council in regard to the Council Road Committee. He recommended a regular paving program from year to year. Paving is practically being forced on us by public opinion. Dust has become quite a menace by the speed at which people are allowed to travel. As I see it the time is ripe to consider a debenture paving program; our debenture debt is going down every year and we shall soon be in the position where we can carry on the paving programme without incurring debentures. The public opinion demands good roads.

Educational committee recommended payment of the following accounts: Burlington High School \$49,644.64 Guelph C.V. Institute 525.20 Streetsville High School 358.87 County Road Committee advised that resignation of George Currie be accepted and that Nelson Robinson be appointed to fill the unexpired term. The committee further recommended carrying out the road program similar to last year of laying down about the same mileage as last year.

The following accounts were passed Finance: \$2905.53; county buildings, \$687.57; hospital accounts, \$1680.40; printing, \$129.75; education, \$933.71; railways; legislation and agriculture, \$700.00.

Moved by Mr. Irving, seconded by Mr. Evers that R. E. Young and Co., county auditors, be granted an extra \$50 for work done after the death of the late H. M. Pettit.

Moved by Mr. Robinson, seconded by Mr. McEwen that a grant of \$200.00 be made to the Lorne Scots Rifles of Peel and Dufferin and Halton.

Moved by Mr. Allen, seconded by Mr. Robinson that a grant of \$100.00 be made to the Boy Scouts Association to apply to Blue Springs Scout Reserve in Halton county.

Corn Borer inspectors were appointed as follows: Trafalgar, Lewis Patterson; Nelson, John Mc Cormack; Napaucanawa, J. J. Anderson; Georgetown, H. M. Campbell. The remuneration is 45 cents per hour.

The county buildings committee recommended that the caretaker of the county buildings be given an increase in salary from \$100.00 to \$200 per year and the matron from \$200 to \$250.

Mr. Davis, reeve of Georgetown, asked the council what part Georgetown would have to pay if a connecting link were made between Georgetown and Glen Williams. Mr. Smith explained that in such a case 50 per cent was paid by the county and 50 per cent by the department, but only if such an agreement were signed by both the county and Georgetown. Mr. Davis asked the road committee to think it over and report at the next meeting.—Champion.

News and Information For the Busy Farmer

Quality of Chicks
The lowest priced chicks are not always the cheapest in the end. It will depend upon the production and health of the flock from which the eggs are gathered, on the quality of male birds used and on the care taken of the eggs after being gathered and while in the hatcher. The ration fed the breeding flock not only influences the hatchability of the egg, but may influence the vigour of the chick from the fertile egg. Then there is the size of egg which may be a factor. It stands to reason that a chick from a 25-ounce-to-the-dozen

egg will be larger and stronger than one from a 25-ounce lot. There is a reason for chicks from the largest size eggs being more expensive than chicks from smaller sized eggs. For instance, the eggs cost more in the first place. Thus when buying chicks more than the price should be considered.

Seed Cleaning Plants
Seed cleaning plants have been established in many centres and by their use the grain being sown is much improved in quality and is freed from weeds. These power plants not only make an excellent job of grading the grain so as to give a uniform sample, but by use of the proper screens and various attachments the weed seeds are practically all removed and it is possible to fairly well separate the different varieties of grain. The Government assists in the purchase of these machines when they are used for custom work. Up

to the end of 1937 there were 63 seed cleaning plants in operation and last year over 700,000 bushels of grain were cleaned and nearly 4 1/2 million pounds of clover and grass seed; 11,794 farmers were served by these plants. There are many farmers in the vicinity of these plants who might advisedly make use of them, but there are yet many centres where cleaning plants are not available.

The ordinary fanning mill did good service in its day, and with the use of the proper screenings and adjusting the wind blast a good job can be done with the fanning mill, but we believe a better job is accomplished by the larger power unit.

T.B. Cleanup Campaign
Ontario farmers are becoming increasingly conscious of the necessity of eliminating bovine tuberculosis from their herds. Breeders of pure-bred cattle have for years had their herds tested under the accredited

herd plan and have received compensation for reactors, but under the restricted area plan for T.B. clean-up now well under way, owners of both grade and pure-bred cattle receive compensation for reactors. In Ontario there are sixteen counties under the restricted area at the present time. Six counties have completed the educational campaign and circulation of petitions. A campaign is under way with nine or ten other counties and several others are holding meetings and seeking the sanction of the county council to proceed with the preliminary work leading to a T. B. free area. The request first comes from the cattle owners and two-thirds of the cattle owners must be in favour of the area test before the work is undertaken.

People who have half an hour to spare usually spend it with somebody who hasn't.
