Bladder Campion is considered one of the most serious weed pests in Ontario by the Crop, Seeds and Weeds Branch of the Ontario Department of Agriculture.

It is difficult to kill owing to its deep fleshy rootlets and number of stems growing from one crown. The crown is often down six to twelve inches in the soil and this explains the difficulty in cutting it off with the plow and the need of deep plowing followed by a stiff toothed cultivator with wide discs which overlap.

Bladder Campion is sometimes misnamed "White Cockle" or "Catchfly". Campion is a killer and is only practical solution if the weed is prevalent and cultivation impossible.

The first plant found on your property is a danger signal, says the Department. Eradicate it and save trouble later. The Crops, Seeds and Weeds Branch, Ontario Department of Agriculture, Toronto, will gladly forward you free of charge a pamphlet on how to get rid of this dangerous pest. Write for it immediately.

SOL — THE SCORCHER

The extreme heat of summer is a real danger. Excessive high temperature is a similar danger to those who work in factories, engine rooms and other hot places and who fail to take precautions against heatstroke and heat exhaustion.

Heatstroke and heat exhaustion are radically different in their effect upon the patient and in the treatment required.

In heatstroke the face is red or purple, the skin is dry and hot, the temperature, measured by the thermometer, high, and the patient is unconscious. In heat exhaustion, much the opposite is the rule. The face is pale, the skin moist and cold and the temperature low, the person is usually conscious. Remember the difference. In heatstroke, a dry skin; in heat exhaustion a moist skin.

What should be done in these cases? First call a doctor. Then remember that the hot body should be cooled and the cold body warmed. In heatstroke lay the patient on his back in a shady place and remove as much clothing as society will allow. Sponge body with cold water.

In hot weather wear light, porous clothing. Avoid unnecessary exposure to the sun or excessive heat either indoors or outdoors. Keep your head covered in the scorching sun. Drink plenty of cool water and to each glassful add a tablet of common salt (gr v) either with or without 5 gr. dextrose. Use a liberal amount of salt food to replace the salt lost through sweating.
