GARDENING NOTES

Next Year's Irises

One of the "must" items which may gardeners have marked down on their schedules for attention during the next few weeks is the ordering of irises for new plantings, or the improvement of old beds.

Unlike most garden perennials the bearded irises can be set out during the midsummer. In fact, they are better planted then than later in the fall, when root growth again becomes

No other flower so easily grown as the iris has such a wide range of color combinations. Almost every shade and hue is to found in petals of this attractive flower. Because of the ease with which it may be hybridized, many amateur and pro-fessional plant breeders have been making thousands of crosses yearly. with the result that seedlings ' have been grown which not only produce taler and better branched stalks, bearing more and larger blossoms, but new colors and color combinations have been also brought into existence.

The Finest Pansies

To grow the finest pansies, must be sown at the right time Planting during the first two weeks of August results in the strongest plants, though early September is not too late. If one has a greenhouse, seed may be started indoors in Janu-

Sow In August

While pansy seed may be sown in early spring, the practice isn't recommended for sections where summers are hot and dry. Pansles delight in a cool climate and to obtain the finest flowers gardeners in warm sections must time their blooming period fall in the cool spring months. Since pansies are blennials, August sowing will give the plants sufficient time to grow and develop for a spring display of flowers.

By far the best place to sow is in a coldframe, yet a well prepared sheltered seedbed will give you very good results also. Unless careful attention is paid to the preparation of the soil, results are often disappointing.

In The Shade

Ground-cover plants have an important part in the semi-shaded garden, taking the place of grass where it will not thrive and to fill gaps in the flower borders Blue carpet bugle (ajuga), white lily-of-the-valley, light blue crested iris and blue leadwort (plumbago) are flowering sorts which do well in the shade, as do the evergreen Japanese spurge, periwinkle, the chap?" evergreen winter creepers (euonymus) in several varieties and the Baltic ivy.

RESEEDING LAWNS

IN THE EARLY FALL The weather in August and Septemturf from seed. The temperature during the day stimulates the germination of seed and the growth of young grass seedlings and yet is not so hot that these tender plants become scorched or dried out. The soil is also warm at this season so that the seed germinates rapidly, the young plants often appearing through the ground in four or five days after seeding.

Generally speaking, states A. M. Ross, Division of Forage Plants, Central Experimental Farm, Ottawa, the best results are obtained by using seed which has been purchased pure species and mixed by the purchaser, as in this way it is impossible to use only the seed of grasses suitable for lawn purposes. The most widely adapted lawn grass mixture is composed of four pounds Kentucky blue grass and one pound colonial bent, strange man and it's all right for this quantity being sufficient to sow it is impossible for the average person to tell the quality of grass seed by general appearances, the purchaser should stipulate Grade No. 1 quality when buying the ingredients of this mixture to ensure their purity and vitability.

The area to be sown should be composed of good loam soil, free from weeds, and should be level. The seed bed is prepared by cultivating to a depth of 5 to 6 inches and then breaking down the top inch or so of the soil into a fine state of tilth by alternate rolling and raking . Hard lumps or stones should be removed from the

The seed should be divided into two equal portions, the first half being used to sow the whole area and the remaining half to go over it all again, but this time proceeding at right angles to the direction taken when sowing the first time. Covering may be done by lightly raking the seed into the earth, but better still by covering it very lightly with screened, weed-free

soil. Ten pails of soil is sufficient to cover one thousand square feet seeded area. The area should then be rolled with a light roller and watered with a very fine spray. To obtain the best results the seeded location should be kept moist until the young seedlings have become established, but care should be taken to prevent flooding, washing or puddling of the soil. If the young grass attains the height

of two inches before winter it is adviscable to cut it back with a good sharp lawn mower. This cutting should only sever the tops of the leaves and the cuttings should be caught in a grass catcher and removed of the cafe. from the lawn

As a general rule it is not wise cover the grass with brush, straw any other covering for winter protection. These are apt to hold the ice Zea- in the spring by shading it from the only warm sunshine and in this way to

> Parson Brown had finished his sermon and was making the announcements for next week.

"And now, my bred'ren," he said, "next Sunday I will speak to you upon the condition of the church and my topic will be The Status Quo." "Pardon me, Parson," interrupted "I don't distrust you. - I love you

TOR the satisfaction of that numerous unimaginative company who like to ask "who?", "when?" and 'where?" it may as well be admit-

ted that this chapter in two young lives reached its consummation in the month SHORT of January, 1928; that it was enacted in a cafeteria within walking distance of

"she" involved might have been that young couple you noticed at the table across the aisle. "I hoped I'd find you here, only I hoped I'd get in before you were

the State house (if one was a good

walker), and that the "he" and

seated so I could carry your tray "It's lucky you don't overtake me every night, you'd soon spoil me."

"Was it a hard day? Are you

tired?" "Not a bit. I feel great. I had raise today, and after the first of April I'm to have my own office." "What do you mean by your own office? Are you going to leave where

"Oh, no, I should hope not. mean that I'm not to work in the general office with a lot of other girls. I'm to have a little corner near my boss."

"Is he married?" "I never asked."

"Would you care?" "Not a shap.".

"Do you mean you like him so

much it wouldn't make any difference whether he was married or. "I mean it wouldn't matter to me,

yes. What have you been reading since I saw you last?" "Why do you ask that?"

"You sound as though you might have been examining a shipment of would-be best sellers-a bit Freud-But I wish you'd eat something."

'Say, do you agree with that

"Who, my boss?" "No, that Freud."

"I never read him. I don't have time to read anything but novels, working all day, and in the evening sewing and mending, and a dash of washing and ironing; and someber is favourable for the growth of times I like to go to the pictures or a show.'

> "You've never let me take you to show, yet, and I've asked you times enough, Lord knows."

"Oh, you've been fine to ask me, and I do appreciate it; but, you see, I can't quite bring myself-I'm not exactly flapperish, you know, and -we don't even know each other's names."

"Well, what of it? Say, listen. Did you ever think it out like this? Suppose you're walking with a girl friend and a man comes along that she knows and she names him to you and you to him and you all walk along together and come to her house and she says good-by and goes in. You walk along with this you to ask him in to your house because she's told you his name. And perhaps he's a man you ought not to know at all." "Would you be so kind as to fill

my glass for me?" "What I was going to say was," he continued, "that if we were introduced a hundred times we wouldn't know each other any better on that account. We've talked about books-of course, I didn't believe what you said just now about not reading-and music and pictures and life, and that's the way you get to know people. Why, I can read your thoughts about things as if they were photographs."

"Oh, you can, can you? Just to test you and show you up, what am thinking now?"

"You won't be angry?" "No. I'll take the risks."

"Well, then, you're thinking things are reaching a point when I'm going to talk about something besides books and music and picturessomething more personal, and you want to hear and you're half afraid. You're held back by inhibitions that aren't worthy of you. You rather envy girls that take the bit between their teeth and bolt, but still you cling to old-fashioned ideas. Am I

Yes, and you make me feel shamed, somehow."

"Look here, what is your name?" She told him. He left her abruptly, to return in

a few minutes with the manager "Good evening," said he, "this young man is a neighbor of mine and he's very anxious to be introduced to you. You'll excuse me if I don't stop. I see I'm wanted at

the desk." "I'm pleased to know you, and now that the conventions have been observed, will you marry me?" "You make me more and more ashamed with every word you speak

-to take me on trust like that..." "But I love you, YOU, no matter what your name is. If you distrusted me, why did you let me join you night after night?"

"Come on, let's cut dessert." They went out, the young man

carrying both checks conspicuously in his hand.

Crop Report

Below will be found a brief synopsis of telegraphic reports received at the Head Office of the Bank of Montreal from its Branches, under date of August 11th, 1938:

General-Karvesting is now fairly general in the Prairie Provinces, with rapid progress being made in Manitoba, Saskatchewan and Southern Alberta. Wet weather in many districts has temporarily delayed cutting, but the moisture has been beneficial to late crops and pastures. In Central Alberta warm weather is needed to hasten the ripening of crops. The effects of rust in Manitoba and Eastern Saskatchewan are becoming evident as harvesting progresses, and yields and grades of susceptible varieties of wheat will be appreciably reduced. Orasshoppers are damaging standing crops in parts of Manitoba and Saskatchewan. Further hail damage har oc-. curred at widely scattered points. Quebec Province continues to enjoy ideal growing conditions, with warm weather, accompanied by light rains in many districts. Prospects as a whole are good for a satisfactory harvest. In Ontario harvesting is well advanced and good average yields of the main crops are in prospect in all sections. Moisture conditions are satisfactory and growing crops continue to make favourable progress. Prince Edward Island crop conditions continue to be favourable, with excellent prospects. In New Brunswick and Nova Scotia, following an over-abundance of rain during recent weeks, several days of sunsnine in the past week have benefited all crops. Early grains are ripening rapidly and good average yields are indicated. British Columbia has enjoyed cooler weather during the past week, with heavy showers in most districts, which have been very beneficial to crops generally. Harvesting of grain is under way in the interior, with good yields on irrigated lands, but only 45% of average on dry

Ontario-Threshing of an above average crop of fall wheat of good quality nears completion. Cutting of spring grains is well advanced and threshing returns indicate satisfactory yields. Corn, buckwheat, beans, roots and tomatoes are making excellent progress. A heavy crop of good quality hay has been stored under favourable conditions. Recent rains have benefited pastures, and the new growth is satisfactory. An average crop of peaches and pears of good quality is expected, while a slightly below average yield of apples is forecast. Flue tobacco is ripening rapidly and priming is general; indications are for satisfactory yields of a good quality leaf. Heavy rains have caused some damage to the burley and black fired varieties on low land.

JASPER NATIONAL PARK SETS TOURIST RECORD

Jasper Park, largest of Canada's national playgrounds and fastest growing in point of popularity, is rapidly approaching the greatest lourist year in its history. The count of visitors entering the park since the first of June to the end of July was 6,653, an increase of 2,077 over the corresponding period of last year when the to-

tal was the greatest since 1929. The figures are compiled from accurate records checked by government auditors at Park administration headquarters and by auditors at Jasper Park Lodge. Travel in and out of the Park by permanent residents of Jasper village and by trucks or cars operating in and out on purely business missions, is not included. figures represent purely bonafide

tourist traffic. Advance reservations for the remainder of August at Jasper Park Lodge and at both the Athabaska and other hotels in Jasper village are the heaviest in years and all three resorts unquestionably will enjoy a nearcapacity business for the full month.

WHY NOT PLAN-**BUSINESS CAREER**

Canada's increasing Business needs more Business executives. Where are these future leaders in Business? They will be found by hundreds in such young men and women as you. But youth must be TRAINED to fill these positions efficiently. Plan now to take a Shaw Business Course at one of Shaw 12 Day Schools. Consult Telephone Directory for locations. The Shaw Plan of individual instruction enables you to join any time. Shaw Courses lead to recognized standing. Shaw's Model Office gives actual experience. Shaw Employment Bureau gives free assistance to graduates. Instruction also by the Shaw Home Study method if desired. Phone or write for free Descriptive Booklet antitled."Up With the Times". SHAW SCHOOLS, Head Office, 1130 Bay St., (Phone Ki. 3160) Toronto.
