THIS AND THAT IN SPORT

By G. "Mac" McIlvray

LOCAL BOYS TO RACE AT CANADIAN NATIONAL EXHIBITION
 On Monday, Sept. 5th (Labor Day) four of Georgetown's long and short distance runners will compete at the C.N.E. in the mile and three mile track events. Dave Crichton, Bill Collier, Johnny and Jimmy Emmerson have proved to be very successful in this line of sport, and we wish them every success at the Ex. Crichton is a member of West End Y, while the other three boys are attached to Gladstone Athletic Club.

GIRLS! HAVE YOUR AUTOGRAPH BOOKS READY
 No doubt Syd Apps and Jimmy Fowler will have a busy time on Saturday signing autograph books for the fair set. But they say: "the more the merrier."

THIS MAN FOULS!
 While most people did not even know that Roy Poulis was taking up the sport of running seriously, he had done some practicing at the University of Toronto Schools, and this summer won the Edward Booth Memorial Cup for the record county open road race. Roy Poulis, a member of the U.T.S. trophy for the new half-mile record. Georgetown has turned out some excellent runners and Roy is one of them. He is at present holidaying in Scotland.

RUN FROM TORONTO TO GEORGETOWN IN 3 1/2 HOURS
 While it was not noted around much, last Saturday afternoon three runners from the Gladstone Athletic Club of Toronto made a run to Georgetown, covering the distance in approximately three hours and thirty minutes. Those making the run were Orval Garbutt, Freddy Bristol and Scotty Potter, and had planned this visit on the Georgetown members of the club—Bill Collier, Johnny and Jimmy Emmerson. They left Toronto at 12 noon and arrived here at about 3.30. It is the intention of these runners and the club with which they are associated to try and interest more of Georgetown's younger boys to start training for long and short distance running, as there has been a lot of good material turned out in Georgetown in the past few years. Another Toronto to Georgetown run is expected shortly when a letter will be delivered from Mayor Day of Toronto to Mayor Gibbons of Georgetown.

WENT DOWN FIGHTING
 Georgetown's baseball squad of the Halton County League are out of the final round of the play-offs, but they went down fighting before Oakville. The team played a fair brand of ball all season, and they had a place to spend their evenings even though the team did not always come through with a win. Better luck next year boys.

MILTON OUT-CLASSED ACTON
 Looks as though Milton may lead the baseball group again this year, unless "Lefty" Galbraith of the Oakville team can battle the Miltonites, and we don't think so. Milton laid Acton low by two decisive scores of 7-2 and 12-2. So it is moth balls for Acton and Georgetown.

SOFTBALLERS NOW IN FINALS FOR TIP-TOP TROPHY
 Pirates retained a firm grip on the Tip Top Tallors Trophy by defeating the Glen in the first game of the finals in the Georgetown Softball League. Pirates took an early lead in the first inning and drove home Tuck and Tuck. In the second Tuck tripled with one on, later scoring on McNally's single. The Pirates scored their fifth and last run in the fourth. The Glen accounted for their 2 runs in the fifth. Final score: Pirates 5, Glen 2. The second game of the 3 out of 5 series will be played in the Glen on Monday night.

THE PROPER TIME TO CUT ALFALFA FOR SEED
 In parts of eastern Canada suitable for alfalfa seed production it was formerly the practice to cut the first crop for hay and the second crop for seed. In the best seed producing areas the first crop is now taken for seed which is cut in August. In western Canada the cutting of the first crop for seed has always been the practice followed.

A decision which is sometimes difficult for the grower to make is in regard to the proper time to harvest the crop for seed. John M. Armstrong, Division of Forage Plants, Central Experimental Farm, Ottawa. Since alfalfa seed does not mature evenly due to the prolonged blossoming period, a plant may bear pods varying from ripe, which are dark brown in colour, to green and immature. Because the ripe pods shatter easily, there comes a time when more seed is being lost by shattering than is being replaced by the ripening of the green pods. Just before such a time is reached is the proper time for cutting. This will be when about half to two-thirds of the pods are brown. Much of the immature seed will mature in the swath.

In seasons when a hay shortage is imminent the grower may be compelled to take the first crop for hay if the second crop is podding up well. It may probably be cut for seed. The decision as to when to cut this crop should be decided by the average date of the first fall frosts for the locality. If the crop is cut after a severe frost, not only is the germinability of the seed lowered but the sample will contain much discoloured seed resulting in a lower commercial grade.

News and Information For the Busy Farmer

More Good Lamb Required on Market
 Farmers are cautioned to exercise greater care in the marketing of lambs at this season of the year. Prices for good early lambs have been very satisfactory until about August 1st when many farmers, almost to a man, put on unrivalling prices during the last week in July, began to market lambs that should have been held on pastures, for at least a month, and in many cases two months. An oversupply of poor lambs, resulted in a serious drop in all lamb markets, and while the situation has partly corrected itself, the market is still sensitive to weakness if producers continue to market undesirable lambs.

As a rule lambs from the more common domestic breeds of sheep do not finish for market at farm weights under 90 pounds to 100 pounds (80 to 90 lb. at the market). Before selling lambs it is always wise to use the scales. This is particularly important at the present time so that the sale of underweight lambs may be avoided. Good early lambs are in demand at all stockyard centres, packing plants and city markets. Lamb meat is an especial favourite in the home, at tourist centres, in hotels and restaurants. When it is said that lamb is a popular meat, this means good choice lamb from well finished carcasses. Light, unfinished lambs do not produce the kind of meat that is relished by tourists and the Canadian people. Poor lambs are not good sellers and are unsatisfactory to all sections of the trade, including the consumer. This year pastures are excellent all over Canada and there is a small surplus that puts on cheaper gains than the growing lamb on good grass. All farmers can increase the value of their lambs by a closer check-up in weights and marketing at the right time.

Regueuing Potato Fields
 Regueuing is a valuable method for the control of certain degeneration or "running out" diseases of potatoes of virus origin. Regueuing implies the detection, lifting, removal and destruction of infected plants. As a control measure the practice is particularly valuable against the three common potato diseases, mosaic, leaf-roll and spindle tuber. These three diseases produce characteristic symptoms on the plant. Mosaic produces a mottling effect in the foliage. Leafroll causes a slight, general yellowing of the foliage, and an upward rolling of the leaves. Spindle tuber intensifies the green colour of the leaves, imparts an upright, starting appearance to the plant, and causes the production of spindly or misshapen tubers with bulging eyes. It has been shown that regueuing should be timely and systematic. Usually, mosaic and leafroll can be detected in the field when the plants are about four inches high. At this stage of development the field should be systematically examined row by row for the presence of virus infested plants. Regueuing should be done preferably on dull days as the light conditions are then best for the detection of mosaic. On bright days the operator should carry an umbrella or traverse the potato rows in such a manner that his shadow is cast over the plants immediately before him. The operator should carry some type of closed container, and when a diseased plant is detected, it should be lifted in its entirety with its little disturbance as possible and deposited in the container. Under no circumstances should diseased plants be pulled and left in the rows, nor should they be carried out and deposited on the headland. Diseased plants should always be carried from the field and then immediately destroyed by burning. Regueuing should be systematically practised at weekly intervals until the potato vines begin to mature. For further information write to the nearest Plant Pathological Laboratory.

Current Crop Report
 Farmers are well pleased with the harvesting of splendid grain crops. In Western Ontario practically all grains are now harvested except late oats, while in Central Ontario about 75% of the grain is cut, and in Eastern Ontario about 60%. In Northern Ontario the harvest is well under way. Stock threshing proceeded rapidly up to August 1st, but was interrupted by frequent and heavy rains during the first two weeks of August.

The average yield of fall wheat for the province is now estimated at 27 bushels per acre, as compared with 26 bushels in 1937, and a preceding 15-year average of 25.1 bushels. The harvested acreage of 742,000 acres is the highest since 1927, and compares with 718,000 acres in 1937. Total production will amount to approximately 20,000,000 bushels, which is the largest crop since 1926. In Eastern, Western and Central Ontario, the yield per acre was reduced and the quality considerably lowered by late and stem rust. In each of these three bushels per acre less than in 1937, but in Southern Ontario, which comprises the two rows of counties bordering Lake Erie and where half the acreage is located, the yield was almost five bushels higher than a year ago and this more than offset the decline in other sections. Heat and rust reduced the crop most severely in the counties of Grey, Bruce, Huron, Wellington and Perth.

Spring grains have matured early this season and reports indicate that the yield per acre will generally range from average to slightly above average in practically all counties. Harvesting is about a week earlier than usual. Damage was caused by the most severe outbreak of army worm in the last fifty years, but for the province as a whole the loss would probably not exceed 2%. Individual fields, however, suffered 10% to 15% injury, and in a few cases much greater. Severe stalk rot is a considerable lodging in some parts, making cutting difficult, but the loss is not serious, while in Eastern Ontario, grasshoppers caused rather severe damage in several localised areas. Rust is affecting the grain crop in Eastern Ontario, but the yield is expected to be a good average and considerably above the poor yields of 1937.

CELEBRATED FORTIETH WEDDING ANNIVERSARY

On Saturday evening, August 13th, a family dinner was held at the Estaminet, Burlington, in honor of the fortieth wedding anniversary of Rev. and Mrs. G. W. Tebbe. Many gifts and good wishes marked the occasion, friends in church, fraternal and radio circles sending their felicitations to this much respected couple. Following their marriage in Nottingham, England, Mr. and Mrs. Tebbe resided in Ireland for some years, their three children being born in Dublin. Their surviving children are Bertram and Gladys, a son, Maurice, dying some years ago. Mr. and Mrs. Tebbe came to Canada thirty-three years ago, residing in Hespeler, where they were in charge of a Canadian branch of the Misses Smiley's homes. Mr. Tebbe was ordained in 1912, and had charge of Moorfield and Drayton parishes; later of Erin, Hillsburg and Reading. In 1913 he became rector of St. Mark's, Orangeville, going to Hamilton in 1915, to become rector of St. James' church. In the absence overseas of Rev. Dr. Rensson, Rev. Mr. Tebbe was in charge of the Church of the Ascension. In January, 1919, he became rector of St. Luke's, Burlington, in which parish he is still stationed. Recently he completed his 2,000th radio broadcast of Old Man Sunshine. He has the distinction of having broadcast over CKOC, the first church service in Canada to go on the air, his church choir taking part. Mrs. Tebbe is active in church work, and is a Dominion Life member of the Woman's Auxiliary. She is also prominent in V. O. N. and E. O. D. E. work here—Gazette, Burlington.

VISITORS MAY AGAIN SEE QUINTS

The two daily "personal appearances" of the Dionne Quintuplets for the benefit of visitors has been resumed, following a two-week interruption of the regular schedule. Slight sore throats and fear of possible minor heart complications if the babies became over-excited during their illness, resulted in the physician, Dr. Alan Roy Dufon, cancelling the usual showings during which visitors are able to watch the children at play. Now completely recovered, the Quints will again resume their usual daily schedule. For the past week they have been allowed out in their playground, but fences surrounding it have been screened in to prevent outsiders watching them at their games.
