Canadian Wheat Crop

Placed at 358,433,000 Bus.

According to the first estimate of the Dominion Bureau of Statistics, total Canadian wheat production in 1938 is 358,433,000 bushels, including 338,396,000 bushels of spring wheat and 20,037,000 bushels of fall wheat. Included in the spring wheat estimate is the crop in the Prairie Provinces, amounting to 334,000,000 bushels distributed as follows: Manitoba 50 million, Saskatchewan 143 million and Alberta 131 million bushels. The spring wheat estimate also includes 22,000,000 bushels of Durum wheat, 15 millions of which were produced in Manitoba and 7 million bushels in Saskatchewan.

Total wheat production in Canada in 1938 is the largest since 1932 when 443,081,000 bushels were produced. Improved rainfall in 1938 in the Prairie Provinces ended a series of partial drought years, although considerable damage to the crops is being done partly offset the improvement in moisture conditions in the making of the crop. Rust damage has also affected the quality of a fair proportion of the wheat harvested, so that the grading of the crop as a whole may not average above the grading of the 1937 crop.

Production of all coarse grains in Canada in 1938 is larger than in 1937, due principally to improved yields in Saskatchewan and Alberta. The oat crop in 1938 is estimated at 393,071,000 bushels, which is an increase of 124.6 million bushels over the production in 1937. Barley production is estimated at 108,915,000 bushels, which is 25.8 million bushels larger than the 1937 crop. Fall rye is placed at 9,516,000 bushels, and spring rye at 2,849,000 bushels. Each of these crops is more than double the amount produced a year ago. Flaxseed production in 1938 amounts to 1,580,800 bushels in contrast with the production of 697,600 bushels in 1937.

The main hay and clover crop is estimated at 13,894,000 tons, an increase of almost half a million tons over the production in 1937. Declines in hay and clover production occurred in Prince Edward Island, Nova Scotia, Manitoba and British Columbia, with increases in the remaining provinces more than offsetting these declines.

NORTHERN QUEBEC DEVELOPS AS AGRICULTURAL REGION

While most farming in Quebec is located in the St. Lawrence Lowland region, there are also many farms along the valleys of the rivers flowing into the St. Lawrence, in the Lake St. John district and along the Bay of Chaleur, an article in the Canadian National Magazine points out. In northern Quebec, the Lake St. John district to the east of the Abitibi area in the Quebec part of the Clay Belt, both territories served only by the Canadian National's northern route are developing particularly well. The Dominion Government, the writer goes on, has established an agricultural experimental station at Normandin in the Lake St. John district and the Provincial Government has sponsored a demonstration farm at Amos in the Abitibi area. These farms are studying the crops and plant varieties best suited to the region, new colonists are coming in, and settlements are showing a steady growth in population and in volume of production.

—Have your exhibits ready for the Fair here next Wed. and Thurs. Sept. 28th and 29th.

Help improve your personality with Wrigley's Gum. Keep your teeth white, breath sweet, by using healthful Wrigley's Gum daily—so millions do. The children also love the delicious refreshing flavor of Wrigley's Double Mint. Take some home today.

Georgetown Fall Fair

September 28th and 29th

HALTON'S OUTSTANDING EXHIBITION

First Night of Show commencing at 8.00 p.m. in the Georgetown Arena

TAP DANCING — TUMBLING
THREE BOXING BOUTS
MUSICAL CHAIRS ON HORSEBACK
"POTATO RACE"
CHORUSES BY GEORGETOWN CHORAL SOCIETY
GEORGETOWN ORCHESTRA AND LORNE SCOTS
BAND IN ATTENDANCE

FAIR DAY

FAIR TO BE OPENED BY JAS. HEWSON, WARDEN OF HALTON COUNTY.

EXCELLENT HALL EXHIBITS
BEST LIVESTOCK EXHIBIT WEST OF TORONTO
MIDWAY — BABY SHOW — SHEEP BINDING
LADY'S CAR DRIVING CONTEST
POTATO RACE — HARNESS RACING

Don't forget the parade of Prize Winning Animals at 4 p.m.

FAIR NIGHT DANCE IN THE ARENA

FUN FOR EVERYBODY

The Directors want you to have a good time at Esquering Agricultural Fall Fair at Georgetown. They have done their utmost to ensure that you will have it.

WISER THAN HIS MASTER

Edythe S. Richardson

This is a true story about a dog named "Lobo." He is a beautiful husky owned by a college professor. The professor is a great lover of dogs and owns several besides the husky. He is an outdoor enthusiast and during the winter vacations takes trips into the deep woods sections of northern New Hampshire. On these trips he travels by car as far as the roads permit and then transfers his camping outfit to a sled which is drawn by a team of dogs to a suitable camping place far from civilization. From this base camp he takes short trips into the forest and mountains to study the life and habits of the small animals such as moles, shrews and mice.

He has trained Lobo to be his lead dog. The dog loves this work and is always happy to get into the woods. He manages his team mates intelligently and efficiently. Always thoughtful of his dogs, the professor usually walks ahead on snowshoes and breaks a path for the team.

One day the professor had gone farther from camp than he realized and it was late afternoon when he started his return trip through the deep woods toward the lake. The base camp was on the opposite side and he had planned to go straight across the lake for the camp.

When he had gone some distance he realized that the dogs were not following as closely as usual. Turning about he found that Lobo was standing still and sniffing the air. Apparently the dog was disturbed by something of which his master was unaware.

Seeing that his master had stopped, Lobo lead his team mates around and started in a direction opposite to that of the camp. Knowing that dogs have very keen senses the master decided to follow the dogs.

It was getting darker all the time and even the sky line was becoming less distinct in the twilight. Shortly Lobo changed his direction of travel again but still not in the direction of the camp. His master, anxious to get to camp, began to wonder whether the dog really knew what he was doing or not. He called to Lobo and after patting and talking to him urged him to go directly toward the camp. Lobo laid down and the other dogs always did what Lobo did. This was the dog's way of telling his master that it was not wise to go in that direction. After coaxing, the man started out thinking that the dogs would follow him. He had gone but a short distance, the dogs following reluctantly, when the ice began to crack under his feet. Stepping back quickly he looked ahead and saw the glitter of the open water. Then he knew that Lobo had been wiser than he.

Gratefully he gave the dogs free rein to go home the best way. Lobo skillfully skirted the unfrozen part of the lake and lead his master to camp safely. At camp the dogs were rewarded by being given an extra good supper before their master had his own.—In "Our Dumb Animals."

AFTER HARVEST CULTIVATION TO ERADICATE SOW THISTLES

After harvest cultivation is the cheapest and most effective method of controlling perennial sow thistle, states J. D. McLeod of the Crops, Seeds and Weeds Branch of the Ontario Department of Agriculture. "The creeping rootstocks of the perennial sow thistle are at their weakest stage right now" said Mr. McLeod. "Heat, sunlight and dry weather are our best partners."

Mr. McLeod advises deep plowing immediately after harvest. The land should be allowed to dry thoroughly for two or three weeks WITHOUT CULTIVATION. It is pointed out that surface soil is separated from subsoil; moisture is cut off and root-stalks are hollow and milky and cannot stand heat and dryness. Follow later with the broad shares on the cultivator to get any plants that remain.

Shallow plowing, cultivating or deep discing will kill young summer annuals and induce seeds to germinate, states Mr. McLeod. After harvest cultivation pays big dividends in assuring larger succeeding crops and better returns. Kill weeds when they are weakest. Plan now to work all infested fields which are not seeded down.

Mother—Junior, isn't it rather extravagant to eat both butter and jam on your bread at the same time?
Junior—Oh, no, mother dear. It's economy. You see the same piece of bread does for both.

ANCIENT TIMEPIECE RETURNS TO BRAMPTON

One of the mementoes of pioneer days in Brampton has returned to the town in the form of an old "turkey" watch which was first sold to Andrew Bright, Brampton tinsmith and hardware merchant, by W. A. Mitchell, the town's first watchmaker. The watch was for many years in the possession of George Bright, Kansas City, Missouri, who learned his father's trade, then moved to the States. Mr. Bright died recently, having suffered from a stroke. In his 84th year at the time of death, he had treasured the old timepiece as a keepsake. It is a key-wind model, with a double case and a very heavy lensed crystal. Following George Bright's death it was returned to Mrs. Jennie Pascock, Queen St., Brampton, by the executors of her brother's estate.
