PRIZE-WINNING ESSAY

SCHOLARSHIP

A few years ago a no ed scientist! carried out a great many experiments with alcohol, the results of which go! to show that, even in small doses, a- [mounting to not more than a tablespoon, alcohol lessens a man's power of doing mental work For example the speed and accuracy with which his students could add, subtract, multiply and givide numbers in arithmetic were tested. They imagined that they could make arithmetical calculations, more quickly than without it but the facts were just the opposite. In one case a student was directed to add columns of figures for half an hour a day for six days. This was done to determine the average speed. and accuracy with which he could work. On the seventh day he began taking about two tablespoons of alcohol and continued this for thirteen days. His ability to add, in place of being maintained as it was on the sixth day, was at once decreased and continued to decrease. On the ninetenth day the use of alcohol was stopped, when again in speed and accuracy at once became apparent.

Memory was tested by setting students to memorize columns of figures. It was found that 100 flyures could be remembered correctly after being repeated 40 times. But when alcohol was given it was found that only 60 figures could be remembered after being repeated 60 times. Even the simple operations of adding sums, or reading aloud, were found to be interfered with in this way.

Alcohol in Sport, Scholarship, Busi-ness and Disease.

C.T.U. Essay and Poster Contest:-

Sweden was the first country to test the effects of alcohol upon quick and accurate rifle shooting. A number of officers and soldiers, all good shots, were directed to shoot at a target 200 yards distant. The tests were made several times a day, and on different days. When alcohol in doses of three tablespoons was given, 30 per cent fewer hits were made, although the men all thought they were shooting faster and more accurately with alcohol than without it.

The stomach is met with in heavy drinkers, especially those who indulge in large quantities of spirits. These strong drinks cause irritation of the stomach lining, but the weaker ones also sometimes disorder digestion by delaying the process. "Some people that work would be started as soon as the weather permitted.

The area to be landscaped comprises some eight or nine acres under the bridge and to the north of the structure. The ground will be levelled and improved, the western bank theraced and planted with shrubs and

taining alcohol. Professor Chelshire avoid its use altogether. says; "Captain Carver was the cham-pion rifle shot of America; on one occasion I saw twelve glass balls thrown into the air by a spring, and by a repeating rifle the whole twelve were shattered by Captain Carver before one had reached the ground When asked if intoxicating drinks influenced his shooting he replied: "If I were to drink, I couldn't shoot." William T. Tilden, America's cham-pion tennis player, said in one of his articles. "It is certain injury to touch alcoholic drink during 'cournament! play, as it effects the eye, the mind and the wind."

The Murray eight-oar team, which carried off the Australian championship in Sydney, consisted entirely of .-

Amos Alonzo Stagg, a famous toot -. = ball couch, said before the Senate Judicary Committee in 1926: A. a. coach I do not believe in the use of alcoholic drinks. Now, the American ! athletes stand on the top the only, ones that approximate us at all are the Finnish athletes, and they do not use liquor.

ul experiments, have learned beyond all question that alcohol - even a little of it - lessens a man's power of doing useful work. But, in addition to the scientific proof, there is the experience of men who employ large numbers of laborers. Such employers tell us that total abstainers do more work in a given time than an equal number of men who are moderate drinkers of alcohol, even One of the most interesting tests of the effects of alcohol was that | made upon skilled workmen by Dr. Aschaffenburg. Four experienced typesetters offered themselves for the experiment. Three of them were mo-derate drinkers, the fourth was known to drink excessively now and again. After first determining the men's average ability, by counting the actual number of letters which each man set in four periods of fifteen minutes each per day, they were directed to work on four successive days for periods of fifteen minutes each, as in the preliminary tests. On the second and fourth days each man was to take three tablespoons of alcohol, but none on the first and third. All four men thought they were doing more work with the alcohol than without it. but the results showed conclusively

120 YEARS OF ODDFELLOWSHIP ON THIS CONTINENT

It has been 120 years since the beginning of Odd Fellowship on this company. The business of such a continent.
