## TREES TO TRAP SNOW

The use of tree belts as a means o trapping snow to fill dugouts which are excavations on farms to hold water has been successfully demonstrated at the Dominion Forest Nursery Station, Sutherland, Sask. belt of trees, 1,500 feet long served to catch enough snow to fill a dugout of 17,000 cubic feet capacity, each lineal foot of tree belt thus contributing eleven cubic feet of water to the dugout. For this purpose, a single belt

## AGRICULTURE'S KEY

The agriculture of tomorrow will differ from that of today as much as ours does from that of fifty years ago. The actual progress will be made through scientific research, made effective by wise policies of production and marketing, and the agricultural countries which reap the greatest benefit will be those that use the only key that can unlock the doors to nature's secrets.-Dr. J. M. Swaine. Director, Science Service, Dominion Department of Agriculture.

## FRUIT DEALERS FINED

For selling apples in open barrels not marked as required by the Regulations under the Parm Products dealers were each fined \$10.00 and costs at the Ottawa Police Court, recently. At the same court, another dealer was fined \$10 and costs for similar violation of the Regulations. in that part of the packages of apples offered for sale by him were not marked, while in other packages the

### ONTARIO FARM BROADCAST TO BE HEARD ON BROADCAST

The CBC Farm Broadcast for the Ontario Region will celebrate its first anniversary early in February and at thta time will make its bow to the network.. On Monday, February 5, stations CBO at Ottawa and OBM at Montreal will join this service broadcast especially for rural listeners.

It was just a year ago that the first quarter-hour farm broadcast began over CBLtoWith Don Fairbairn at the microphone, this original programme included last, minute reports from Toronto produce markets and producer information. On May 1, 1939, the broadcast was extended to a half-hour with "The Craigs" and Canadian Press Agricultural News as added features:

The wholesome, homey visits to Briarwood Farm where "The Oraiga" live, have delighted rural and urban listeners of CBL and CBM. The daily soripts are written by Dean Hughes and the cast includes Grace Webster as Martha, Alice Hill as Janice, Frank Peddie as Thomas and George Murray as Bill. Don Fairbairn will continue as commentator for these. OBC Farm

HOPE IN WHOOPING COUGH

Way do doctors not discover something to top wheoping cough? This i quently asked question is answered by Dr. H. D. Cushing in the ment "Easier said Than Done." Last year, according to Doctor Cushing, ever 15,000 children died of

whooping cough in North America alone and more children died of this disease in Canada than of any other acute infectious disease. The writer, who is physician to the Children's Memorial Hospital and to

the Alexandra Hospital for Contagious

Diseases, Montreal, says in part:— "Whooping cough, or pertussis as the doctors like to call it, is one the contagious diseases. It starts like a common cold or cough but gradually in the course of a week the cough becomes spasmodic and the typical paroxysms and 'whooping' develop. The twelve product stock markets like most epidemic diseases there is no give the negro attendant, asked him: in Canada under the supervision of fever and no prostration. ## The state of the s HEATING HINTS by James Stewart

WHILE this cold weather confort depend to a great extent upothe even temperature of your home. To maintain this constant, steady heat is a simple matter Cand one that I have frequently discussed in this paper. It will bear repeating:

To begin: Do not use the Smol: Pipe Damper (generally known as the Turn Damper) for the dail control of your heat. This denute: should always remain as marly closed as possible, without interfering with the free burning of the coal.

The regulation of the fire during the day (if you do not have a thermostat attached to your furnace) should be

controlled ontirely with the Check and Ashpit (flap or slide) Dampers. When more heat is needed upstairs, close the Check the Check Damper and

open the Ashpit Damper. When here is sufficient heat in your house, close the Ashpit Danver and Spen the Cheek Damper, Note that these two dampers operate simultaneously. . . . When one is

open, the other is closed. One important consideration to bear in mi :! is the location of your Check it somer and Turn Dans er. The Check Damper should be lorated between the chimney and the Turn Damper. The latter should be located between the Check Damper and the furnace itself.

If these dampers are properly placed and if they are moved as suggested, you will be able to maintain an even temperature in your home at all times without
