—Milton Champion.

A Letter From the Mayor

To the Citizens of Georgetown:

Since it appeared in the Georgetown Herald that the Georgetown Hydro Commission had purchased the property at the corner of Church and Main streets, many inquiries have been made by interested citizens as to the purpose for which it was acquired.

It is the intention of the Georgetown Commission to have plans and specifications prepared for the construction of a modern building which will be suitable for the comfortable, office requirements and distribution of the steadily increasing Hydro business in the Town of Georgetown.

Realizing as I do, that this is a public matter affecting all the citizens of the municipality using power and light, I am taking advantage of this opportunity to present some information which may be of interest to Hydro customers.

During the first year of Hydro in Georgetown (1914) a revenue of $10,260.00 was collected and due primarily to the increased population and the establishing and expansion of industry over the period of years which has followed, this revenue has increased to $35,000.00 estimated for this year.

The rates charged consumers for domestic and commercial power in Georgetown are considerably lower than those charged in many other cities of this and [illegible] Province of Ontario. The [illegible] with their rates, [illegible] of the Georgetown Commission [illegible] the Province of Ontario.

Col. Bal[illegible]
