REMINISCENCES OF GEORGETOWN

Continued from last week our Reminiscences of Georgetown, by C. W. Young, as written for the Herald 20 years ago.—

More About Pigeons

Speaking about wild pigeons, my mother used to tell us that when she was living on Dundas Street before she was married the pigeons would come over the lake in flocks that seemed never ending. People who lived on the bluffs overhanging the water would arm themselves with hop poles and mow the birds as they took the rise to the higher level.

My uncle, Alexander Proudfoot, who lived at the sixteen near Oakville, told me that on one occasion he went out with an old blunderbuss and killed a cart load of pigeons with a few shots. That was a wonderful old gun and it used to be looked at with great curiosity by the boys. It had a flint lock and a bell muzzle, it seems to me about an inch and a half in diameter. The custom was to pour in about a handful of powder from a powderhorn and about the same quantity of shot. Of course it scattered all over the landscape and kicked like a mule, but it killed everything in front if close enough.

Not far from Georgetown there lived a farmer named Johnny who used to tell very marvellous stories. One of them was that he loaded up a blunderbuss after the same pattern as the one old Sandy Proudfoot owned, but was afraid to fire it off, he tied it to the fence, and when the pigeons were nicely gathered in the pea field fired a stone among them and pulled the trigger with a lanyard. "Unfortunately," said Johnny to his audience who were waiting to here how many pigeons he had killed, "the gun, aimed a little to low, and didn't get a bird, but the boys picked up a couple of bushels of legs." "Johnny," said Peter Ackert, who had listened to the story, "I believe that you are lying." And that was the general impression. Johnny was a captain of militia and there was always a training on the Queen's birthday. So that company was called together in Georgetown, and as may be imagined it took a good deal of the old stuff to get them in shape for the evolutions, of which the captain himself partook freely. At night Johnny, mounted on a white horse, with a sailor's cutlass about his waist and a red sash, called the roll and addressed the command: "Save the Queen, boys. We will gather in a nice little square circle in this here beautiful spot." How they executed the manoeuvre does not exactly appear at this time of writing, but the echo of the cheer-can be heard at this distance and the roars of laughter of the spectators.

The announcement that a large paper mill is to be erected in the Province of Saskatchewan for the manufacture of paper from straw, which is pretty much of a waste product on the prairies, recalls the fact, if it has not already been mentioned in these notes, that in the late fifties or early sixties very extensive experiments were made in the Barber paper mills at the credit by a Mr. Clemon, of Ottawa, in the manufacture of straw paper, but as far as I can remember without conspicuous success. At any rate very little if any straw paper was made there, then or since. Some years later straw paper was made at the Don Mills, Toronto, and those who can remember the Globe of those days will recall what it was like. The colour was a muddy white and the consistency was brittle and the sheet broke when folded. The texture was so hard that type wore out very speedily and had to be renewed very frequently.

To those who are interested in mechanical process, it may be stated that at that stage of the game the Globe was printed on multi-cylinder presses, direct from the type. I do not know how many cylinders there were in the Globe machines, but I used to see in the press rooms of the New York Herald, presses of the same pattern, with ten cylinders, five on each side. There was a feeder for each cylinder, and a man to each to take the paper away, making twenty to a

press, besides several overseers, and the paper was printed on only one side. There were several of these monsters in the Herald office, each as high as a one story house and when more modern machinery was introduced, they were scrapped. Nowadays one machine prints several times more papers than the whole battery and delivers them printed on both sides and folded, with two or three men at the most to attend them.

The End.

SOUTH AFRICA BUYS CANADIAN POULTRY

An order for Canadian Record of Performance poultry breeding stock has just been received from South Africa. The order is for two cockerels and six pullets. The prices paid are considered very satisfactory, being \$25 each for the cockerels and \$15 each for the pullets, f.o.b. point of shipment. This order follows negotiations carried on by the Production Service, Dominion Department of Agriculture and follows several similar orders received in the last two years from British Guiana and Trinidad.

The fame of Canadian Record of Performance poultry has during the past few years, spread to several countries and it is recognized that under the system of breeding, poultry for greatly increased egg production and more suitable market meat type from valuable sources of foundation breeding stock which are established in all provinces of Canada.

The Director of Agriculture for British Guiana visited Ottawa recently and said he was greatly pleased in regard to the quality and egg production of several pens of Canadian R.O.P. breeding stock which he had shipped to the Department of Agriculture in British Guiana in the last two years. He reported that the birds had averaged 75 per cent production since their arrival, even in the period that they were becoming acclimatized to tropical conditions, which are decidedly different from the Canadian climate in which they had been reared.

For years past, large numbers of Canadian R.O.P. breeding stock have been exported to the United States where commercial breeders and hatchery men have long recognized its value in increasing the quality of their breeding flocks.

Social Evening at Cedar Crest

About 50 members and friends of Cedar Crest Golf Club met at the home of Mr. and Mrs. Willoughby on Friday evening for their closing social evening and presentation of prizes.

The first part of the evening was spent playing bingo. The special prize, an electric toaster, was won by Mrs. Graham Farnell.

Mr. Willoughby presented the following prizes won during the season's competitions: the Willoughby cup to Mr. Robert Foulis; the Ladies' Shield to Miss Jean Mackenzie; the runner-up prize to Miss Hettie Lawson. The lowest ringler score prize went to Miss Mary Chalmers with a score of 38.

During the evening Mrs. Willoughby and Mrs. Mackenzie, ladies' captain, were presented with bouquets of mums. A bouquet was also sent to Mrs. Miller who has been ill.

A tasty luncheon was served by the social committee and a vote of thanks was tendered to Mr. and Mrs. Willoughby for their generous hospitality. Mr. Ted Force was the capable chairman of the evening.

Mr. and Mrs. J. B. Mackenzie kindly offered their home for bingo and luncheon on Friday evening, October 18. All members are urged to be present.

ANNOUNCEMENT

I wish to announce that I have sold my insurance business to Mr. Frank Petch. May I take this occasion of thanking the policy-holders of the companies I have represented for their favours, and trust that they will continue to favour my successor with their business.—C. G. Benham.

Canada Defends Alaska

Alaska is a possession of United States but it is largely dependent on Canada's mobilized forces for its defense. Up until this summer this territory, as large as the province of Quebec, was garrisoned by about 300 men stationed at Chilkoot Barracks near the Yukon border, since the days of the gold rush. Several months ago reinforcements of between 600 and 700 American soldiers were sent to guard the new air-base at Anchorage.

This air-base has developed as a result of greatly increased United States interest in its north-western possession once considered safe by reason of its remoteness but now realized to be the central point on the so called Great Circle Route from the United States to Japan. Reports of Russian military activity in north-eastern Siberia, only a few miles from American soil and Japanese development of a naval and air-base at Paramushiro, just 600 miles from the last Aleutian island of Norton Sound, have served to dramatize the strategic position of Alaska. The distance from Seattle to Yokohama via the Aleutian Islands is about 4,900 miles. Via Honolulu it is 6,600. Flying by way of Alaska there is no need of making a single hop longer than 900 miles, whereas the initial stage of the journey by the Hawaii route is across 2,400 miles of open sea. If the United States wished to attack Japan, bases in Alaska would be indispensable. For purposes of defence, likewise, these bases would be necessary for aerial patrols which could prevent the enemy from outflanking the great naval base at Pearl Harbour, Hawaii. It is essential also that Alaska be held, if only to prevent an enemy from operating from such a dangerous position.

For only a little over three years the United States has been building defences. Bases for planes, ships and submarines are being built at Sitka not far north of Prince Rupert B. C. at Kodiak on the Gulf of Alaska and at Dutch Harbour far out on the Aleutian island of Unalaska. Meteorological stations have been set up to provide information essential for those handling both planes and guns. Land has been acquired for air and military bases at Fairbanks and Anchorage, and when these are completed over 3,000 troops, including anti-aircraft units, will be sent to Alaska.

Communications are the greatest problem in the defence of Alaska. For this huge territory there is only one railway—470 miles long—and 2,500 miles of roads, often eliminated by Arctic blizzards. Air travel is the only feasible means of communication and defence. Last June a significant service of the Pan American Airways was inaugurated from Seattle to Juneau, with connection to Fairbanks and Nome. Nome might easily be an important base on an air route to Asia. Last Spring, the president of Yukon Southern Airways of Canada announced that his company was negotiating with Russia for an airline from Canada to Vladivostok via Nome, but diplomatic problems make such a development highly improbable for some time. A highway from the United States to Alaska through British Columbia is a much more likely international project. Experts have declared it feasible, and it is possibly one of the subjects considered by the joint defence board, which has recently been exploring the Pacific coast.

Canadian-American cooperation in the defence of the West coast is assured. The defence of Alaska is of major importance to both countries. Projects are already under way, but only a stop-gap defence can be ready this winter. Authorities estimate that it will be late in 1941 before the first stable defences are ready. In the meantime, with only a few thousand troops to guard 966 million square miles of territory, and with the main American naval base in Hawaii some 2,040 miles from Unalaska and 2,181 miles from Sitka, Alaska depends on Canadian forces for swift aid against invasion. Swiftness might be of great importance. The Governor of Alaska declared last summer that twenty paratroopers could capture the territory. Indispensable for the defence of this strategic American area is the Royal Canadian Navy which watches the coast of British Columbia and the Royal Canadian Air Force for which the Dominion is developing air-bases on Vancouver Island, Queen Charlotte Island, and at Prince Rupert near the Alaskan border.

LOCAL W.C.T.U. ASKS GOVERNMENT TO RESTRICT SALE OF BEVERAGES

(Continued from Page 1)

as a Union, to our Government urging the putting into legislative effect immediately wartime restriction of liquor sale as asked for by a deputation of church leaders representing all the major religious denominations in Canada. The colossal waste involved in a yearly expenditure of approximately 180 millions of dollars for a narcotic drug prejudicial to morals, health and efficiency, is a menace of the most serious order, and requiring immediate attention on the part not only of our Government, but of our citizens generally.

Mrs. A. Reeve and Mrs. R. H. Wright, who represented our Union at the recent Provincial Convention in Toronto, were the first to draw attention of the work being carried on by our organization in its many departments.

Space permits the mention of only one item, selected because it is a new feature of W.C.T.U. effort, namely the talking movie entitled "Alcohol, What It Is, and What It Does," which was shown at the Thursday evening session of the Convention.

This picture was filmed at North Western University, Evanston, Illinois, and showed laboratory experiments performed to demonstrate the properties of alcohol which make it of such value to industry, but which, when given the opportunity to act within the human body, work havoc with brain and nerve.

Particularly interesting were the pictures of the tests made with students to show the effect upon efficiency and speed in work, of the ingestion of alcohol. As a method of education in temperance, the production of this talking film marks a tremendous advance, and the National W.C.T.U. of America is to be highly commended for the vision which prompted the effort to carry out this project.

Before closing the meeting, a committee of two Mrs. Walter Peck and Mrs. C. B. Dayfoot) was appointed to consult with the local branch of the Ontario Temperance Federation in regard to any temperance effort in which both organizations may be interested.
