450 musicians to entertain in Gigantic Tattoo, Acton Park, August 13, 8 p.m.
There will be no meeting of the Retail Merchants Association on August 10th. The association will resume regular meetings on September 14th.
Stop losing your head! Start using your head! Don't flutter around like a chicken wondering what to have for the next meal. It's simple - speaking of chickens, have you tried Ret's fresh roasted chicken sandwiches? They're something to chuck about, with that extra delicious flavour. Put up to take out, or delivered. Phone 230. Ret's (Hunter's Inn), 9th Line & Maple Avenue.

MACKENZIE NEWS

Do the local "monsoons" show up the leaks in your roof. We have a good supply of asphalt shingles at \$8.50 per square and No. 1 SX shingles at \$12.75 per square. Now is a good time to get a roof on before the bad weather. You will be amazed how a new asphalt roof will add to the appearance of your home, as well as keeping it weather-proof.
See you cutting your lawn after the rains.

Los Angeles Drive Seeks Full Value From Sunshine

Los Angeles county has started a comprehensive anti-smog program to insure residents getting full value from the California sunshine. American Public Works association reports that an air pollution authority has been appointed with broad powers to enforce anti-smog regulations throughout the county as well as inside the City of Los Angeles.
Like other metropolitan cities, Los Angeles' soot and smoke problem is aggravated by fumes from outside city jurisdiction. Experts agree that smog control is most effective if tackled on a county-wide or regional basis.

State legislation passed earlier this year made possible creation of the Los Angeles air pollution authority. County-wide smog control also was authorized by state action this year for Milwaukee and Pittsburgh.

The Los Angeles authority has powers to license all places in the county which generate noxious fumes, excepting private homes. Licenses will be issued only if fume-eliminating equipment is installed. To curb home-created fumes, trash-burning schedules are being drawn up which will take advantage of maximum daily wind shifts.

Revocation of operating licenses for places which will be the penalty for failure to install and use fume-eliminating equipment will be a first step toward smog control. It is hoped that the authority will be able to make its program effective by the end of the year.

Correct Ironing Procedure Saves Clothes, Electricity

Correct ironing procedure saves clothes, electricity. It is a common mistake to iron clothes on a high temperature. The heat of the iron should be just enough to remove wrinkles. If the iron is too hot, it will scorch the fabric and waste electricity. The correct ironing procedure is to use the lowest temperature possible for the fabric. This will save the clothes and the electricity. The correct ironing procedure is to use the lowest temperature possible for the fabric. This will save the clothes and the electricity.

Plutonium Not Harmful

Plutonium, the violently radioactive element of which atomic bombs are made, can be swallowed in small amounts with virtually no ill effects, Wright H. Langham of the Los Alamos laboratory reported to the American Chemical Society. Referring to plutonium toxicity, which he termed of great value in safeguarding the lives of workers engaged in developing peacetime applications of atomic energy, he said that recent laboratory tests indicate plutonium is extremely poorly absorbed from the intestinal tract, which means that only slight exposure can occur to workers who may, in the course of their work, swallow small amounts of it. Even when substances like sodium citrate, which increases the solubility of plutonium, were added to the solutions administered orally, rats used in the study absorbed only about 0.2 per cent of the total amount swallowed.

Business Men's College

University of Illinois is establishing an extension service for business, which will be comparable to the agricultural extension service offered by the state agricultural colleges to farmers. The new service, which is the first of its kind in the country, will include private consultations, short courses and regional conferences. Initially, a management consulting service covering business administration, production, office operation, personnel, purchasing, sales, records and finances will be offered, with members of the university staff acting as consultants. The program will be under auspices of the college of commerce.

Has No Atmosphere

Scientists say that the moon has no atmosphere in the sense that atmosphere is known here. Probably even the atmosphere visited by Professor Piccard and Commander Settle on their trips into the stratosphere would seem shockingly dense compared with the rarefied atmosphere of the moon's envelope. Scientists have found that there are no such holders of heat as running water and vegetation on the moon, and there being no atmosphere, the temperatures are exceedingly variable. Water, vegetation and atmosphere act as brakes on the swift changes of temperature.
