

NOTICE TO CREDITORS

In the Estate of Albert E. Farnell, late of the Town of Georgetown, in the County of Halton, Grocer, Deceased.

The creditors of Albert E. Farnell, late of the Town of Georgetown, in the County of Halton, Grocer, deceased, who died on or about the 23rd day of November, 1949, and all others having claims against his estate are hereby notified to send by post, prepaid or otherwise, to deliver to Messrs. Langdon and Aylsworth, Georgetown, Ontario, Solicitors for the undersigned Executors of the Estate of the said Albert E. Farnell, deceased, on or before the 1st day of March, 1950, their names, addresses, descriptions and full particulars of their claims and the nature of the securities, if any, held by them and that immediately after the 1st day of March, 1950, the Executors will proceed to distribute the estate of the said deceased amongst the parties entitled thereto, having regard only to the claims of which the Executors shall then have notice.

DATED this 31st day of January, 1950.
Annie W. Farnell, and
Graham Farnell, Executors
by Langdon & Aylsworth,
their solicitors,
Georgetown, Ont.

WEATHER MORE THAN USUALLY UNUSUAL

With September temperatures in January, this year is vigorously attempting to outdo the unheard-of winter freaks of 1949. The green Christmas spread all the way from Windsor to St. John's, Newfoundland. The recent warm rains are reminiscent of October. But if the marks of 1949 are beaten, it will take some shooting.

Last winter was the mildest on record in Eastern Canada. St. Lawrence River transportation opened earlier than ever before. Then came the warmest year within memory, enhanced by such phenomena as a near record drought for much of Ontario, Halifax for fifteen consecutive months had temperatures much above normal. New York reported a year without a winter. The Prairies had record August heat and for much of their winter storms began with dust instead of snow. Vancouver and Victoria, with their customary fates of December roses and February daffodils dug out their own muffs when the thermometer dropped to arctic zero. British Columbia, in general, was calmed by two record storms within a few days, set up all-time marks of one sort or another. No place in Canada escaped the unexpected.

Obviously this sort of thing cannot go on, and yet it does. The weather trends, in fact, are all upset. Places that should be warm are cold, and vice-versa. Science has a partial answer for this country-wide freakishness. The Arctic, which normally would be bursting with high air pressures pushing outward, has, instead, a traffic jam of storm structures huddling around the North Pole. Even Greenland has been remiss in sending its cold dry air in a wide arc over this continent, and has had, instead, a series of low pressures, stagnating because of the aggressiveness of high air pressures from the Tropics which pushed up through the temperate zone.

This, we are told, is a part of a trend of the last seventy-five years. Over the still longer range, we are still in retreat from the Ice Age, whether because the earth has tilted on its axis, or for some other reason. In another fifty thousand years or so we may find ourselves in the Tropics, with palm trees flooding on the lake front and crocodiles enervating in the St. Lawrence river.

It appears time for a high policy. Mr. Twain once said that everybody talks about the weather, but nobody does anything about it. It should be living today. Far from doing nothing, maybe we are doing too much. Our cities and their industries are heaving heat into the sky in constant waves and even if it has no long-range effect it has certainly shortened our outdoor skating season almost to the vanishing point. Stripping off the great forest belts has its impact on the climate. And if we are not sprinkling dry ice on reluctant

clouds to make rain we are setting off atomic explosions, with effects measurable hundreds of miles away. The Russians talk of thus moving mountains. If they do so, they must of course move masses of air. Where does it go? Not here, we hope, but you can never tell.

The year was 1912....

Two soccer players crashed together as they both leaped to 'head' the ball. One fell to the ground, where he writhed in pain. From the crowd of spectators at London, Ontario, stepped forth William Loveday—and he quickly applied first aid that possibly saved a life.

He was the first St. John Ambulance Brigade member to apply his training in Canada. And now, at every major sporting event, at every place where crowds gather—wherever the need is greatest—you will find members of the St. John Ambulance, ready to give freely of their time and skill.

They are living symbols of the spirit of co-operation which has made Canada a great democratic nation—because they choose of their own free will to serve—secure in the knowledge that their right of choice is protected by their right to vote.

When YOU cast your secret ballot at every election—municipal, provincial, federal—you exercise a duty and privilege planned, worked and fought for by your forefathers. Your vote protects the future of your children. To fail in this duty is to be less than a good citizen.
