COME AND SEE OUR FIELD DEMONSTRATION!

How to make better hay - faster

WITH THE REVOLUTIONARY FERGUSON RAKE!

See amazing gentleness! Watch this remarkable new kind of rake gently lift hay from the swath and take it directly to the windrow — with a feather-touch action that saves the precious nutrients in your hay. And we'll prove it's gentle by raking delicate light bulbs from swath to windrow without breaking a single one!

See the fastest rake ever built! The Ferguson Side Delivery Rake can be operated at speeds up to 10 miles an hour — without fatigue damage to the rake, and without shattering precious leaves!

See minimum handling of hay! Watch as we use the handkerchief test to prove that the Ferguson Side Delivery Rake moves hay from swath to windrow in a true sideward motion—and in half the distance ordinarily required!

See cleaner hay! We'll scatter rocks and stones in the swaths, and then show you how the Ferguson Side Delivery Rake delivers none of them to the windrows!

See profitable raking! To dramatize the fact that this rake doesn't leave crop profits in your fields, we'll pick up dollar bills with it — and deposit them in the windrow (with finders keepers on the money)!

See light, fluffy windrows! We'll let you try to pick up hay from the windrow with a pole. You won't be able to, because there'll be no roping or tangling that so often spoils hay. And when you look at the windrow, you'll see that the rich leaves are tucked in — protected from the sun's harsh rays.
