"YOUR STOCK NEEDS TRACE MINERALS IN ALL RATIONS"

HIGH HATCHABILITY—Manganese, a trace mineral, must be present in poultry feeds for a maximum number of hatchings. In livestock feeds it is necessary for proper reproduction, lactation and growth.

TONICS ARE UNNECESSARY—"Medicines" are not needed if you feed a complete ration. Copper, iron, cobalt and iodine are trace minerals used as a protection against goiter, anaemia and related disorders.

ECONOMICAL GROWTH—A lack of any one of the vital trace minerals may result in poor growth, weakness, nutritional anaemia or low resistance to disease. Co-op Feeds contain every element necessary to nourish and protect your poultry and livestock through each stage to a profitable maturity.
