CANADIAN FARM CASH INCOME DOWN

Dominion Bureau of Statistics reports that cash income received by Canadian farmers from the sales of farm products, in the first quarter of this year, amounted to an estimated \$472,000,000, down nearly 7 per cent from the corresponding period of 1954 and 15 per cent below the all time high first quarter estimate in 1952. The decrease, according to the Dominion Bureau of Statistics, is attributable in large part to much smaller wheat participation payments and substantially lower returns from the sale of oats and hogs. Cash income from the sale of live stock during the first quarter this year amounted to 7.5 per cent below that reported a year earlier.

Hog Production Trends

Hog marketings in Canada in July averaged 97,600 head weekly, which is an increase of 24.2 per cent over the average of the same month a year ago. In all provinces there were larger July runs than a year ago, with the greatest numerical and percentage increases on the prairies (Alberta 33 per cent, Saskatchewan 62 per cent, Manitoba 43 per cent.) Ontario, the largest single producer, marketed an increase of 9 per cent over the same month a year ago. It is an-

anticipated that August hog marketings may be almost as large as those of July.

Canadian Meats Disappear

During the first half of 1955, the domestic disappearance of the four "red meats" rose to 784,000,000 pounds a year ago to 784,000,000 lbs., an increase of 7 per cent. Pork was largely responsible for the enlarged supply, with a gain of 60,000 pounds — up 22 per cent. Lamb consumption increased by 10 per cent. Beef disappearance, although continuing high and stable, was some 10,000,000 pounds less than last year. Veal dropped by 7 per cent.

Exports show an even more marked trend. Total pork exports increased 31 per cent or in terms of a weekly average equivalent in live hogs, from 9,000 to 11,800 head. Total beef exports in the first half are 78 per cent below last year's comparable figure.
