

**DESMOND EARL PRESIDENT  
GLEN HOME & SCHOOL**

Desmond Earl was named president of the Glen Williams Home & School for the 1959 - 60 term on Tuesday, May 12th when the

association held their election of officers at their annual meeting at the school.

The Glen principal M. R. McKeown took the chair for the elections which saw Rev. John Rathbone voted vice president, Mrs.

D. Fendley, secretary, and Mrs. Tom Haines treasurer. Dr. C. W. Sayers was the guest speaker at the meeting enlightening the members on the symptoms and treatment of rabies.

**Anticipate Good Bathing  
This Year in the Credit**

Optimism that the Credit River should be fit to swim in this summer, in most areas, is voiced by R. R. Parker of Acton, chairman of the CVCA's Flood and Pollution Control Advisory Board.

Mr. Parker said that on the basis of last year's pollution tests the river should be generally fit for swimming. Now that spring floodwaters are at an end, tests will again be carried out on a regular basis by the Credit Valley Conservation Authority in cooperation with the Ontario Water Resources Commission, the Health Units of the participating counties of Peel, Dufferin, Wellington and Halton. Meanwhile Mr. Parker urged caution in areas in close proximity to known sources of pollution such as older and overtaxed sewage disposal plants, and suggested that as a precaution it would be wise for bathers to avoid swallowing water at any swimming area.

The new sewage disposal plant at Streetsville was expected to contribute an improvement to the river's sanitary status, and it is understood that a new treatment plant is under study for Orangeville.

Mr. Parker's committee is concerned with four different types of pollution, and wherever possible is suggesting corrective measures. Contamination falls into the following categories:

1. Intestinal bacteria. This, of course, emanates from improperly or inadequately treated domestic sewage and when the B Coli count is too high, observers are on the alert for typhoid and similar infections.

2. Biochemical oxygen demand. The BOD rate must be watched in the interests of fish conservation, for while not necessarily harmful to humans an upset in BOD ration can kill aquatic life. Additions of pasteurized milk to spring water, for example, brings death to trout.

3. Toxic. Pollution from such sources as chrome compound used in plating could be injurious, in sufficient quantity, to human and animal life bathing in or drinking river water. To date, this has not posed a problem in the Credit watershed.

4. Silt. Gravel washing operation results in a silt problem which interferes with the balance of nature.

The silt clings to the river bottoms and kills certain forms of aquatic life upon which the fish feed.

The Authority has sought cooperation of gravel pit operators in overcoming this problem, and has had reasonable success to date.

It is apparent, however, that considerable new legislation is indicated if the Conservation Authorities are to implement the numerous reforms recommended in the preservation of our natural resources.

**GOLDEN TULIPS  
WILL MARK GUIDE  
JUBILEE IN CANADA**

A "river of gold" from coast to coast will greet 1960, the Golden Jubilee year of Girl Guiding in Canada next spring, with thousands of golden tulips planted by 6500 Guide companies and Brownie packs in their own communities. It has been announced at Canadian headquarters in Toronto.

Planned to mark the 50th anniversary, the tulips will be planted in front of buildings where Guides and Brownies meet, and larger gardens are planned for public parks in larger cities. Some will be shaped in the form of the Trefoil, the three-leaved emblem of Girl Guiding, and will be planted in cooperation with parks' officials in each city.

Almost a quarter of a million bulbs have been ordered from Holland for shipment to Canada in early September for planting this fall. Special planting instructions for various climatic and soil conditions, prepared by John Bradshaw, noted Canadian garden authority, will accompany each order of bulbs.

"Beautifying their own communities by planting these gardens is one way our Guides and Brownies can say 'Thank You' for the community support they have enjoyed during the past half century," says Mrs. W. Rankine Nesbitt, chief commissioner for the Canadian Girl Guides Association. "It is our hope that everywhere in Canada next spring, golden tulips will be synonymous with Guiding in Canada."

**DAIRY FARMING  
BIG BUSINESS**

Canadians will be reminded during the month of June that the dairy industry is still one of the nation's largest, most important and most complex businesses. Over the years dairying, in all its manifestations, has become highly efficient beginning with the production of milk and carrying through to the delivery of the finished product to the consumer. For instance, it might be assumed that the dairy cow population would be increasing with the increase in milk production which last year topped 18 billion pounds. However, the number of dairy cows in Canada has not varied significantly for many years remaining at a level slightly above three million animals. Steadily increasing milk production, while influenced on a seasonal basis by weather conditions, can be directly traced to herd culling and breeding programs which have resulted in herds of more highly productive cows.

Canadian dairy farming can be divided into two main classes — (1) the specialty dairy farm where all the income is derived from the sale of milk and dairy cattle, and (2) the general dairy farm where the dairy herd and its products are only a part of the farm business. The specialty dairy farm most likely will be producing fluid milk for a nearby city or town and some breeding stock may be sold if herd members are of good enough quality to be in demand. The general dairy farm may provide a variety of alternatives. The milk may be separated and the cream marketed while the skim milk is kept at home as feed for hogs or poultry. Here again the sale of breeding stock from the herd from time to time may be an important part of the general farm operation. General dairy farmers often have some cash grain or other crop to sell in addition to the milk which may go to concentrated milk plants or cheese factories.

In connection with dairy farming it is important to remember that milk is not the only product of the herd. In the process of management, calves as well as cows have to be culled in the interests of herd improvement, which in turn is responsible for the increased milk production mentioned above.

**Even Greater  
Progress Lies Ahead . .**

by Stan Hall, MPP

With the provincial elections coming up on Thursday, June 11th, Mr. Stan Hall, MPP, is taking the opportunity to make the observations printed below about his Conservative party's policy and how it pertains to Halton County and the province in general.

Ladies and gentlemen, it is a pleasure for me to have the opportunity of bringing to you the developments and expansion of the County of Halton for the last ten years.

Halton County is one of the five smallest counties in the province yet we are one of the fastest developing counties and we are the highest assessed or the richest per sq. ft. of any county in the province.

The citizens of Halton County are a very industrious and progressive people. It has been by their endeavours, assisted by an honest Progressive Conservative Government, headed by the Rt. Hon. Leslie M. Frost that has made those endeavours come true. Now I would like to give you a little of the expansions of the County of Halton for the last ten years.

The population of the County of Halton in 1947 was 34,380, in 1958 our population was 98,232, almost three times.

Our assessment for all purposes in 1947 was \$24,682,466, in 1958 our assessment was \$185,379,994 — over seven times.

Educational Budget: Our assessment for all educational purposes in 1947 was \$275,387.37, in 1958 our assessment for education was \$2,628,700.40.

Now ladies and gentlemen I would like to present to you the grants that were given by the Department of Education during the last ten years. In 1947 — \$87,022, in 1958 the grant was between two and three million.

During those ten years many more undertakings have been constructed in the County of Halton. We have one of the finest Homes for the Aged in the province. This year we are adding 139 more rooms, a chapel and an auditorium, at a cost of over \$900,000.

We have a fine hospital, at Oakville, known as the Oakville Trafalgar Memorial Hospital.

Brant Hospital: The citizens of Burlington are in the course of

building a large hospital known as the Joseph Brant Memorial Hospital.

The citizens of the town of Milton and district are building a fine hospital which will be known as the Milton District Hospital.

The town of Georgetown has formed a hospital board and expect to start the erection of a hospital in the near future.

All these hospitals will receive grants from the Ontario Hospital Services Commission of \$2,000 per bed, \$6.60 for each bassinets. They will also receive a grant of over \$600 per sq. ft. of floor space for x-ray, operating, service and kitchen, which, in the case of the Brant Memorial Hospital at Burlington will amount to over \$80,000.

We also expect to start the erection in the County of Halton this year a School for the Deaf, at an estimated cost between two and three million dollars of which the Dept. of Education will pay 100 per cent of the cost.

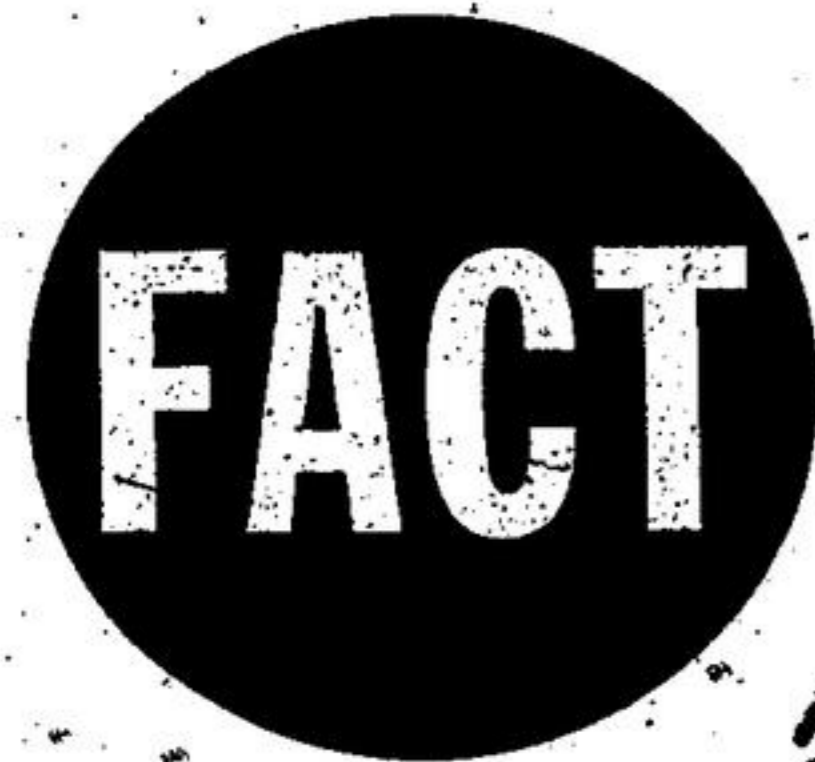

Burlington Skyway: We also opened last year in the County of Halton the longest and highest road bridge in Canada known as the Burlington Skyway.

As I mentioned before, the citizens of Halton County are a very progressive people but their endeavours in the future will not reap the reward that they have in the past unless they vote the return of the Progressive Conservative Provincial Government that has worked hand in hand with the citizens of Halton County in this great expansion.

Ladies and gentlemen, it has been a great honour for me to represent such a progressive people and such a very rapidly expanding riding I have always had the feeling that the problems of our municipal governments, our school boards, public welfare, and our different farm organizations had an honest problem to bring before the different departments of the Provincial Government, in that way it has always been of great satisfaction to me to get a satisfactory settlement to your problems.

It has been a great privilege and honour for me to represent you in your Progressive Conservative government in the Province of Ontario. If you see your way to return me and the Hon. Leslie Frost and his government on June 11th, it will again be my privilege to serve you to the best of my ability, in the future, as it has been in the past.

**"EVEN  
GREATER  
PROGRESS  
LIES  
AHEAD"**

Premier Leslie Frost  
in his Report to the People of Ontario  
4th May 1959.

On June 11, the people of Ontario will exercise their democratic right to chart the future course of our province.

Before them will be the record of achievement of a decade of wise policies and sound management under the government of Premier Leslie Frost... ten years in which Ontario's advances in the development of resources, business expansion and human betterment on all fronts have been unprecedented in Canada or anywhere in the world.

Under Progressive Conservative administration, the stage has been set for even greater progress in the years ahead. The Premier has announced far-reaching and far-sighted plans for government action to continue and increase this dynamic development which has become the envy of the entire world.

The election issue is therefore simple and straightforward. The accomplishments of the past have been tremendous, but *even greater progress lies ahead*. It can and will be achieved, only under these same wise policies and with the same skilled and steady hand at the helm of the ship of state.

**PROGRESSIVE  
CONSERVATIVE**

This culling process is the source of considerable dairy income since it is estimated that 60 per cent of the beef and 40 per cent of the veal consumed in Canada comes from dairy herds. In a country which sometimes becomes preoccupied with the importance of wheat is it worth remembering that in a given year the farm value of the products of Canadian dairy herds exceeds that of any other single farm product, including wheat.
