become more competitive. We must trade more. The brilliant trade conference now taking place is an example of the resolution and determination of this government to sell more products in more markets all around the world.

Technical education, the aid to technical schools which has recently been discussed in this house, and measures of this sort must be part of the solution to unemployment, efficiency and productivity in our country. The technical skills of our workers will indeed affect our production. In addition, all the improvements in medical standards and physical well-being that have gone on in recent years affect our productivity in Canada in the same sense.

Mental well-being, the tensions of our modern life, might be placed on the other side. These tensions may have a deleterious effect on productivity and the mental well-being of some, at least, of our workers and our management staff. The fewer hours worked by labour today may affect productivity. It certainly gives many people in many walks of life through out Canada more opportunity to indulge in outside interests and activities. One could only hope from the point of view of productivity, that this shortening of working hours and the very general increase in wage rates would also be followed by a corresponding increase in responsibility and interest in the job at hand.

This is something which I think is a fundamental worry to many of us, that decreased working hours and increased wages ought to be followed by an increased interest and skill in the job to be done, in the also part and parcel of our productivity needs in Canada. Labour-management harmony throughout our country, the incidence of strikes and disagreements between opposing factions, must necessarily affect our productivity. The interest and efficiency in any given job. The psychological effects of strife must be adverse indeed to production within our economy. The desire to do a job well, rather than to earn the maximum for a minimum of hours and effort, must affect our efficiency and our productivity.

These are perhaps some areas you might say some shadowy areas, that are most difficult to legislate upon, naturally. Nevertheless, they are fundamental in what I say is necessary in Canada, that is, increased efficiency, the ability to make goods better and cheaper. The skills and attitudes of the workers affect productivity, of course, in any country, and productivity is measured by the resources, the capital and tools and the management, if you will, that go into different industries such as agriculture and others in our country. We have seen show us — that productivity is frequently highest in a number of basic resource industries in Canada such as mining, oil and gas, in which large volumes of valuable products may be handled at times by few men and with large capital investments. Nevertheless, this complicating factor within our country has been our problem of distribution, the fact that in the past at least a great deal of capital has had to go for the exploitation or development of these basic industries, and this might not have been the case in other countries. Thus much of our basic capital, while developing our primary industries, has had to go as well to the actual tying or holding of this country together through railroads or other basic forms of communication just to maintain ourselves as a unit. The incidence of the inflow of capital from Britain, the United States and elsewhere has ended the markedly increased productivity in the past. There have been periods when this inflow of capital has been great, followed by other periods of juggling off in which the effect of the inflow of large sums of capital was felt as business prospered and the worthwhile and profit making results of this capital were felt by the investors.

Productivity in Canada is measured through education and research. These must be keystones of increased productivity and efficiency in our country. Education is a key-stone — and I am sure this council will play a part in this — to establishing relations between labour and management, to a knowledge of how technology may disturb, in any given instance, the labour relationship in any particular industry; how this in the long run may have a beneficial effect on the price of goods and on the increased market resulting from that, and on the increased jobs in service and other industries which labour may be able to gain. Thus education and harmony among the various parties increases productivity and efficiency in our country. This sort of liaison education would,

Share \$7846 Halton Wheat Payments

Ontario wheat producers will share a total of \$7846 00 for Ontario wheat marketed from July 1st, 1960 to June 30th, 1961.

This amount is equivalent to the 9 cent levy collected. Individual producer payments are now being distributed.

In announcing the payment, Mr. K. A. Standing, secretary manager of The Ontario Wheat Producers' Marketing Board, said the amount will be shared by approximately 24,000 producers.

Under the Ontario Wheat Producers' Marketing Plan, a 9 cent levy is collected by the board through the dealers in delivery as a price stabilizing measure.

Access to Board Should producer sales to dealers become greater than the market demand, the dealers may offer the excess amount to the board. The board is then obligated to purchase the surplus wheat from the dealers.

Disposal of this wheat is financed by the 9 cent levy. Each year, the unused portion of the levy collected is returned to the producers who marketed wheat.

Last year the board made a 5 cent per bushel payment; the balance of 4 cents per bushel was absorbed in the cost of marketing three and one-half million bushels of surplus wheat.

In Halton 354 growers will share \$7,846.00 for 43,187 bushels marketed. Total growers share \$12,978.64 for 143,008 bushels.

Share \$7846 Halton Wheat Payments

per cent or 3 per cent a year, in agriculture the increase has tended to be somewhat greater. The Gordon Commission has made some predictions until the year 1970 or 1980. Other bodies in Canada have done similar things. I can only say that this measure before us is indeed a milestone and a marking post on the definition of this term and its use in Canada, and the start of information relating to this field. Indeed, as I see it and as our party sees it, it is a milestone on the way toward more industry, increased exports and many more jobs for Canadians.

Economic Dependence On United States Must Be Solved

Whether Canada can reverse the drift into economic dependence upon the United States is a question of increasing urgency of Canadian President John Kane of the Halton CCF. He said last night.

"There is no real hope of solving the problem if our economy is not given the kind of national direction the CCF and the New Party would provide when voted into power."

The present business direction of the economy constantly encourages growing control by U.S. corporations.

"This cannot be solved by trade and opportunistic anti-Americanism. Only a government that can provide positive direction of economic affairs can counter-balance the enormous weight of the U.S. industrial machine on the continent we share."

Quite naturally the key and growing sectors of business are financed by U.S. corporations. Equally naturally, they follow policies in their own interest.

"Mr. Kane told an organizational meeting that supporters of the New Party do not aim at a monolithic state ownership of Canadian business. But they do want public and cooperative ownership of monopolistic and other suitable conditions and government powers sufficient to ensure investment in the interest of Canada."

He said the historic Tory answer to U.S. economic domination has been a tariff and load protection of anti-American sentiment.

"This sort of thing just won't solve the problem," he commented. "What we need is a pro-Canadian policy, not an anti-American one."

Restrictions on trade run exactly counter to the modern world. Every advance of technology, of communications and transportation works for greater international economic interdependence.

"But that does not mean economic sub-dependence."

"Instead Canada must take advantage of new developments in world trade. The most pressing question of this type that is facing us is the development of new trade blocs in Europe. Instead of putting a block across the path of progress, Canada should share in the flexibility that has made the British Commonwealth great. The ultimate objective should be a North Atlantic trading area."

Banquet, Euchre for Farmer Holiday Party

At the Smidgrove Hall on Saturday, December 17th, the Terra Cotta Farmers' Club held their annual banquet. Seventy members enjoyed the turkey supper catered by the United Young Ladies' Church Group. Mr. Art McKane thanked them for the delicious dinner.

The remainder of the evening was spent playing progressive euchre. The two first prizes were won by Mrs. C. Anderson and Mr. Jim McKane, the travelling prizes by Mrs. J. McKane and Mr. Art McKane, and the consolation prizes by Mrs. Alex MacKinnon and Mrs. Fraser Macdonald.

Telethon for Retarded Opens New TV Station

The latest Telethon ever attempted in Canada will be telecast Sunday, January 1st from Toronto in aid of the Ontario Association for Retarded Children.

To celebrate the inauguration of Toronto's first private television station (CFTO, Channel 9), the program will go on the air at 10 p.m. Sunday, January 1st and will run continuously until 4 p.m. Monday, January 2nd. The programme will be the first ever telecast by the powerful new station which has a viewing radius of between 75 and 80 miles, including this area.

All proceeds raised from the telethon will go into a general fund for the introduction and improvement of facilities for Ontario's retarded children.

Top Canadian and American entertainment stars, along with OARC officials will take part in the telethon to provide a wide variety of entertainment, and also information about retarded children's groups.

Retarded children's officials stated that every local association in the province will benefit by the additional facilities

Brampton Resident, 92 Leaves Sister in Town

Funeral services were held Tuesday, Dec. 20th for Florence Anne Ching of 170 Queen St. E. Brampton. Mrs. Ching died suddenly at her home, Saturday, Dec. 17, in her 93rd year.

The former Florence Croff, Mrs. Ching was born in England and married there before moving to Brampton in 1906. She was the wife of the late George L. Ching who died May 22, 1941.

Mrs. Ching was a member of Christ Anglican Church. Surviving are two sons, George and Edward (Ted), both of Brampton, two daughters, Edith (Mrs. Charlie Smith) of Willowdale and Rose of Brampton; one sister, Mrs. Nellie Herborn of Georgetown, seven grandchildren and 12 great-grandchildren.

Service was conducted by Rev. Allan Johnston at the David A. McClure Chapel. Pallbearers were Frank Ching, John Swarston, William Lockwood, Jim Bellard, George Staron and Bert Calvert.

Honorary pallbearers were Col. C. M. Corbett, Bill Palmer, Charles Donaldson, James Norton, Bert Bates and Harry Ceeley.

Interment was in Brampton Cemetery.
