 Telephone: 877-6810  
 Extensions 304, 305 and 306.

# How much heating should your home heating system do?

A heating system should provide reliable heat when it's required, there's no disputing that. But more than that, a modern system should provide Total Comfort. And that means fresh air, cool air, the proper humidity and cleanliness.

You can add all these features when your basic system is Natural Gas forced air heating.

For instance, you already have the ductwork that's required to carry conditioned air to every part of your home... so a Natural Gas air conditioning unit can be installed quickly and economically. Then your heating system becomes part of your summertime comfort, too.

Then there's the case for the electronic air filter which can be added to your heating system. This device removes tiny particles of dust from the circulating air, constantly cleaning and filtering it. Housewives using the air cleaner have found that dusting and cleaning was reduced by more than 50%.

Next, let's talk about proper humidity control. There's a case here for more than comfort, because proper humidity can benefit your health. Breathing is far easier, and some forms of respiratory tract conditions can be prevented. Again, having a Natural Gas heating system makes it easy for you to install a highly efficient humidity control unit.

And while we're on the subject of clean air, keep in mind that as you burn Natural Gas you're doing your part to help control air pollution. Because Natural Gas burns clean, burns completely.

Talk to United Gas or your Natural Gas heating contractor for the total story on total comfort. He'll make sure you're getting the most from your heating system... more than just heat.

Natural Gas. Clean up to the sky.
