Survey underway annexation land

Annexation was again the main topic when planning board met last Thursday evening in the council chambers.

Secretary Grant Usher unrolled a big map which showed the ownership of land to the east comprising over 600 acres. Surveying is not yet completed.

Is this getting the engineers' priority? Dave Muckle asked. He mused the application would likely "sit in Queens Park for a year anyway".

Mr. Usher said he hopes the surveying would be complete before the rext meeting. The

feasibility study is next. The survey includes whole properties, rather than straight lines, so whole farms will be

included in the application. Some of the land is above No. 7 highway, some below, extending out between the third and fourth

lines. Frank Simioni suggested development might be better kept north in this area. The disposal plant is adjacent to the lower part. "The area will be stinky. No getting out of it." Do you suggest the smell will

continue, Mr. Muckle asked. Burlington man's idea

No commitment

Mr. Simioni replied he was not speaking for Beardmore, but from what he had read in the paper he didn't think there had been any commitment that there would be no more smell.

Chairman Sid Saitz recalled the general hope once the old filter beds were cleared up, the smell would abate.

Mr. Usher pointed out there is no smell from the town disposal plant, also in that area.

Annex all Vic Bristow concluded the whole 600 acres should be annexed at once, avoiding double charges. You can stand disposal plant odors better than tannery filter beds, he sald.

We can't stop development, Mr. Saitz said. He pointed out complaints about the smell have ceased in the past few weeks.

He also mentioned the southern part of the property, owned by Rubin Corporation (the former Sprowl farm) is hilly and near the railroad, so not so suitable for homes anyway.

Outside concern Acton is located just outside the zone of concern of the Niagara Escarpment task force, the board

learned by letter. The secretary had been asked to write inquiring about the scope of the study, now

Apparently Acton is within the zone, but a mile and a half outside the limit of the boundary actually affected.

That's the answer we wanted, said councillor Norm Elliott. We know the escarpment doesn't particularly affect our annex-

Road allowance

A letter was received from the committee of adjustment outlining their recommended changes in an application from William Anderson, Main Street, for the addition of a front porch and carport. The committee felt allowance should be made for future road widening and the setback was inadequate.

Only account paid was for 72c for paper.

Present were chairman Sid Saitz, members Vic Bristow, Dave Muckle, Frank Simloni and Lou Bonnette, with council representatives arriving late after another meeting, Mayor Les Duby, Norm Elliott and Bill Coats.

Board of Health future will be discussed here

A motion asking that Boards of Health not be abolished was passed at a meeting held recently in Toronto. Board chairmen, provincial appointees and medical officers of health attended the meeting.

They were acting in response to statements by the Ontario Minister of Health, Dr. Richard Potter that indicated the boards were no longer necessary and should be replaced with regional councils. Dr. Potter was unable to attend the meeting because of illness and decided against sending a delegate because he felt the matter was one he should deal with personally.

Halton County Board of Health will discuss the issue at their next meeting. The matter was

province to buy parkland and take the loss and then allow developers to come along and make a profit on selling homes in new cities and subdivisions.

profit on the land to finance the acquisition of escarpment lands. By buying large sections of land and selling it to subdividers, the Ontario Land Corporation could finance more open space areas, Cities need parks

Following the meeting Mr. Mathews elaborated on his scheme. He said the cities were the reasons for the parks and it was the cities that cause the

season in Halton this fall. "It would be asinine to allow developers to pick up the profits. The government creates land value when they build transportation corridors and the speculators pick up the capital

gains," he charged. He feared the nature lovers would apply political pressure and have nature trails purchased for public benefit. He said the nature trails don't make enough money to pay to have the litter strewn there picked up. "We would be foolish to buy unusable land and let the other go."

Buy development rights In other words he urged the areas required as green belt or open space be zoned parkland and the owner would be paid a certain amount to abandon the right of separation or development.

He said it was politically impossible to say one can't sell his farm to a quarry or housing concern. "The local authority would get the dirty end of the stick that way. It's all right to say we'll zone the parkway belt out, but after two or three public meetings you run into problems." Shouldn't be

He said Burlington was permitting housing in some cases where they knew it shouldn't be, but couldn't avoid it. He said right to development in some lands was wrongly given and

without compensation, He advocated a system that would see rights to development bought either through tax rebate or outright payment. He said it was easier to control developers than retired farmers.
