Ste. 2500, 401 Bay Street, Toronto, Ontario. March 25, 1974.

The Honourable William G. Davis, Esq., Parliament Buildings, Toronto, Ontario.

Dear Mr. Prime Minister:

I write to you urgently since I understand there is some danger that the Cabinet may adopt all or parts of the Solandt Report at meetings Wednesday, March 27, 1974 or take decisions that will lead to a de facto recognition of all or part of that report from which it might later be difficult to vary.

My writing is based on both a narrow but deep concern and a public and widelysupported concern. Personally I practice as a barrister in Toronto but own, use and live in a stone house over one hundred years old built on a beautiful ridge and occupying sixty-five acres in the east half of Lot 19, Concession 3, Erin Township.

I enclose a photostat of a skeletal hundout outline map which I received at a public meeting at Erin in the evening of 12th March, 1974. To my shock I learned that my farm which is at points 90, 91 and 92 of the map is casually shown at the junction point of four different projected routes of a

corridor no less than 600 feet wide intended by Hydro to carry three parallel lines of 500,000 volts each and including towers 162 feet high in each of the corridors.

The area lying just south of point 92 has already been defined as being taken from my neighbour Robert Poupore, Q.C. and his neighbour Bill Mann for the take and other facilities to come from the proposed

Everton Dam! The result on this "most likely" line therefore would be to put a triple line of towers angling beside or even taking my house and garage and, travelling across the highest and most prominent part of the ridge in the narrow land remaining between the height of the ridge and the top of the Dam project and waters. If the Dam lake is Intended to be scenic then this object is defeated by the triple line of scarecrows planned.

The shock of myself and my neighbours is compounded since our very first knowledge of the routes at this point came on our receipt of Hydro material described as "Phase III" received in February, 1974. At the Erin meeting of 12th March my neighbour asked a poll and it appeared from a show of hands that only about three of the residents of our area had received anything under Phase II from Hydro and had no idea that our township area was becoming an actual route of highest preference when

none of us had heard that we were even considered as a possible or alternate route. The Hydro representatives indicated that they had used some erroneous form of malling but, also made it clear that they were aware that our area had not been canvassed in any fair, honest and useful

After hearing and apparently taking no useful notice of the objections of the hundreds of farmers and owners in the area the Hydro people then indicated the Solandt Report would probably come out Friday March 15. They said that they had no idea what Dr. Solandi would find (an obvious mis-statement) but they expected that his findings on the Nanticoke line would heavily support the escurpment crossing at Limehouse on the way to Milton and that crossing would bring the river of towers down through Erin Township relentlessly.

The concerns I have expressed on behalf of the Erin township residents are amplified and become part of the general and flercelymaintained and supported opposition of those lying south and east of our lands in the South Wellington and North Halton organizations of concerned owners.

I have been told by John Schneider that he has, and Hydro and its consultants have the signatures of 2,500 residents, owners and voters who are violently opposed to the Limehouse route. Our own area not having

been advised nor yet organized would probably yield a similar quantity of owners

In opposition. John Schreiber of Cheltenham Indicated that his group and that of Lee Simms had collected about 6,000 signatures in opposition when efforts were first made to force this or a similar corridor through Feel-Halton near Brampton. I presume that many of the 2,500 Schneider people would be within the group who signed the Schreiber petition.

It is obvious that the recent public meetings on the Bradley-Georgetown "public hearings" are substantially pointless and heartless when it seems clear that Hydro has already made its decisions in conjunction with the Solandt finding.

The public-serving aspect of my letter is to point out argently that while the Solandt findings tend in many cases to adopt and make use of the recommendations of their own professional consultants, B.H.I., they appear specifically to depart from those recommendations in the case of the Limehouse crossing of the escarpment.

I am told that B.H.I. told Hydro it would be best for both Nanticoke and the present Bradley line to pass through the complete gap in the escarpment at Highway 401. Dr. Solandt said that Hydro put convincing but not overwhelming comments against running through the 401 gap and parallel to

that Highway, Dr. Salanett said there was torge public opposition to coming through Itattleanake Point but in so saying he was paying attention to about 450 people opposing that crossing point of the escarpment compared to a quantity of between 2,600 and possibly 9,000 people who opposed the use of our area.

It is clear the wishes of the Wellington Halton group have been ignored before they have been heard and that the hearings pre-Solandt have been a meaningless waste of time, mindescribed as "public participation".

Hydro has been anked to make public or at least make available to consultants or representatives of the Wellington-Halton group the data showing the comparison between the route being favoured by Dr. Solandt and the B.H.L. route:

We are told that other, more destrable. routes come to the same Million point by a route west and south of Guelph and that further the existing bad mixture of equipment at Milton itself could be lightened Instead of compounded by putting part of the facilities above and to be hidden by the escurpment thereby freeing the rich farmlands below the encarpment for continued farming use.

The Limehouse use tends to hinge upon a further burdening of the major existing lines. going into Orangeville and this is in spite of

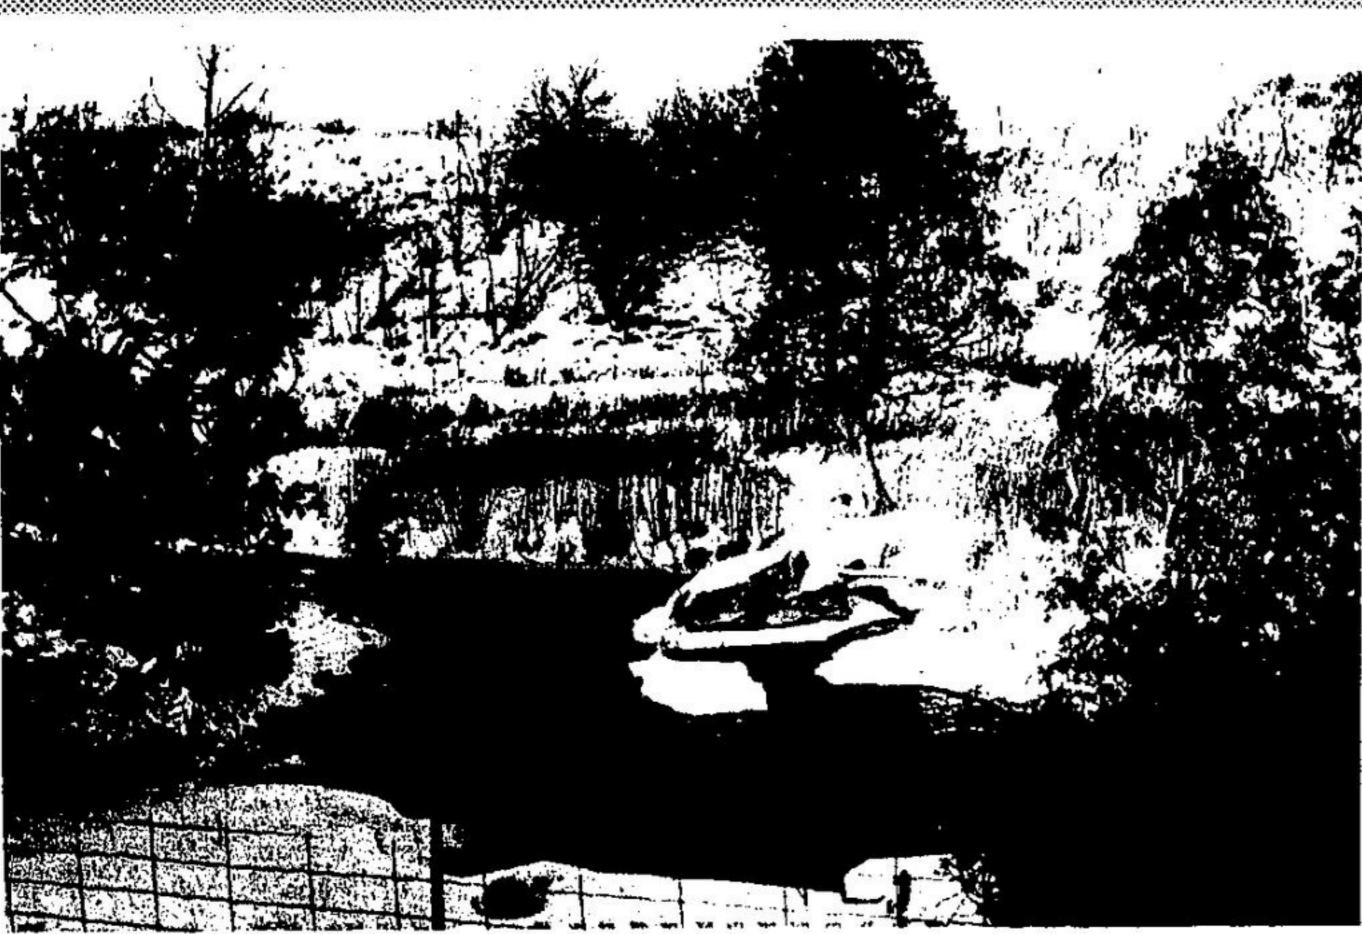

the fact that "security" is burt rather than helped by using that line. I am told that lines to the Garafraxa area below Orangeville have fallen through exceedingly bad leing conditions to which that area is prone so that there has been a major failure no less than five times in the last three years.

I recommend powerfully that any decision on the Solandt recommendations as they relate to the Milton area and the escurpment crossing be deferred. They should be held until valid public meetings have been completed and Hydro at least learns what the physical contour of the lands they seek to affect in Wellington-Peel may be like in their terrain, beauty and present

Finally, Hydro should be directed to pay some attention to the recommendation that a large part of the whole problem may be avoided by expanding the Bruce-Easa line no un to come not through but above the beautiful and populated areas with which our group is concerned and then to travel south in the already existing and nonoccupied corridor running from Essa to Kleinberg. There is ample room in this corridor and so for Hydro has said that it is holding this corridor for "something more important" which has not yet been announced or defined for the public.

Yours truly.

Harold H. Elliott

Porky pig soon extinct?

Add porky pig to the whooping crane, the Atlantic salmon, and other species facing the reality of possible extinction, says Dick Esberod in Crossroads.

Recent revelations from the University of Guelph that what is called "the new pork" or "today's pork" has fewer calories and less fat than beef or lamb, coupled with the acceptance of pork on the diet of weight control groups, has inspired the Ontario Pork Institute to develop a new information approach. Consider:

"Let today's pork help shape your tomorrows. Carorie-counters

do." You wouldn't have seen that one ten years ago. The fat pig is

Special edition

The Free Press will be marking Acton's centennial with a special edition, probably around the first of July weekend. We're thinking of old pictures and articles about the town's history.

Got any suggestions? We'd like to hear from anyone with ideas or pictures to lend. Pictures will be safely returned.

vanishing.

back

issues

That's the word. And the evidence is mounting! Pork has the benefit of more protein than its competitors as well.

So, in 1974, information and advertising programs will centre around that weight-watching theme. Figures from the universities, say the pork people, as well as from the Canada Department of Health and Welfare will support the program.

No doubt some additional interesting figures in support of the program will be provided by the professional modelling agencies.

Back home in Acton from the east for the second time is Pte. Michael McCristall of the Royal Canadian Regiment. The first time Pte. McCristall was shipped back to Canada it had been discovered that he was too young to be in combat. He reached Japan but not Korea. This time the rifleman reached the front lines of the fighting during a 14-month stay in Korea. He is home on leave. Ptc. McCristall is the last of the Acton soldiers to return home. Preceding him were Pte. Jimmy Gunn, Pte.

Arnie Hazel and Ptc. George Turkosz. S. G. Bennett, head of Beardmore Co. Ltd., was re-elected president of the Royal

The annual report of the Postmaster-General shows postal revenue at Acton last year \$2,400.78; money order business \$24,692.33; salaries and allowances \$937.61. (Milton and Oakville figures are about the same, Burlington's lower.)

Had the welcome beams of the bright spring sunshine penetrated to the showrooms of our local milliners yesterday they would have added an additional charm to the wealth of decorations and bewildering array of skilful productions of the milliner's art. The old-established Henderson and Co. millinery department is again under the supervision of Miss Campbell. The season's new shapes predominating are the Glencoe, Rolland and Princess while large shapes with black and white trimmings of flowers, feathers, plumes and chiffon are in favor. The new shades, sardonic and cerino, and

the three-toned ribbons will be popular. This is E. B. Collins' first season and the millinery department is seen at a glance to be in the hands of an accomplished artist Miss Massacar. The favorite new shades shown here are opalescent, fuschia, cyrano and pretty shades of purple. The creams. crimsons and greens are also shown. A new shape is the Napoleon and a number of shapes are to be worn "off the face" and others dropping over the face. Abundance of flowers, broken wings etc. are used and in nearly all cases there is very full trim-

Easter eggs are likely to be reasonable in price. They are 12c this week.

The capital forecast from Hal-

The Journal-Record notes with

I'm going to aim in all directions at once and pull both triggers. Reason is I've got to get ready to go to Germany on Sunday and have a lot to do. Like shine my shoes, and change \$12 into rubles or whatever they use, and get my wife to iron some shirts, and, uh, get her to pack my bag, and, uh, well, a lot of important things.

First of all, I've rediscovered a maxim that was already ancient when Moses looked out over the promised land; women are not only unpredictable, but unreasonable.

My wife had known for about a month that I might be going to Germany on the

winter break. She thought it was great for me. "It'll be a nice change for you. And it'll do you good to get away from me for a few days. You must get sick of me."

I lied politely, as usual. Told her I didn't need a change, that I could scarcely bear the thought of being separated, and that the very idea of being sick of her was nauseating.

Then I came home one day and told her it was all set, but that she couldn't go. "When?", she queried, knowing it would be several months off, and that there might be an earthquake or a flood or something in the meantime.

"Oh, I guess Sunday night," I responded casually, screne in the knowledge that she was in favor of the trip. She burst into tears.

My next topic also deals with the family. and with an aqueous event. Aside from a rainstorm, have you ever been soaked from a great height? I have, Last Sunday.

I was thoroughly enjoying playing with my grandson. He's old enough now to be played with, without fear that he'll break. I had him under the armpits and was hoisting him in the air, making those ridleulous sounds that would make grandfathers blush crimson if they ever heard them on tape

A look of pure glee passed across the kid's face, and I thought, "By gally, he knows me, and he's enjoying his grandad." Next second, I was soaked from shoulder to knee. It was warm, and at first I thought I'd burst a painless blood yessel. But it was the wrong colour.

It's not unpleasant at first. Hather like taking a warm, sait bath, with your clothes on. It's when it begins to cool

There's not much more to be developed there, so I'll turn to topic three; exams, which we have just gone through a session

Nothing is more depressing than starting to mark a set of exam papers, and finding that the first five you mark are fallures. You are filled with self-doubt, "Have I not taught them anything? I'm a fallure as a

teacher. I should go back to the shoe factory. If everybody fails, I'll be fired, because in this system, if you're teaching fallures, you're a failure as a teacher, regardless of any other factors.

Then you pick up a paper and the student has understood what you've taught, and applied it, and used some brains of its own, and it's a ninety percenter. Hallelujah! And you're hooked for another year.

There is only one thing worse than marking exam papers. That is supervising the writing of them. The quaint old word for this function is "invigilating." It sounds kind of dirty, but it isn't. Just utterly boring.

You are figuratively locked in a room for two hours with about 35 teenagers. That alone is a fate worse than death, for some people. Personally, I'd rather be locked in with 35 students than with 35 balloons.

Then begins two hours of hell. The kids are supposed to be tense, nervous, straining every brain cell to do well. They're about as tense as a hibernating bear. Susie takes off her shoes, assumes a yoga position, and looks out the window. Jack's crutch, a relic of skilng and a broken leg, falls on the floor, and you jump a foot, while the victims anicker.

You resort, after the first hour, to such things as counting greasy hair versus washed hair, bras versus braless, big clumsy boots versus sneakers.

You look up at the picture on the wall of the Queen, on whom somebody has drawn a moustache. You fill in, with your imagination, sideburns and realize the Queen would have been pretty dashing in

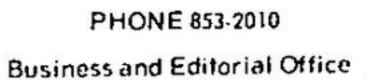

You look out the window at the dirty snow-banks and dream of a beach or a trout stream. You whip around, aware you were drifting, to see if anyone is cheating. Nobody is. Except Joe, who has given up after half an hour of tongue and pen working together, and is sound asleep, head on arms. An early fly buzzes,

Warned you this would be a shotgun column. But I think I've covered everything on the home front.

Next despatch will be from Germany. I promise it will be loaded with fraulein, gemutlichheit, blutwurst, putshes and other Teutonic goodies.

Let's see now, if I remember my Deutsch, "Was maken sie heir? Wie vil hur ist es? Nich rauchen bevor der zug halte. Ich bin ein krieggefangenner. Wo bist die scheisshaus?" Reckon I'll get along.
