

# Blossoms of Spring

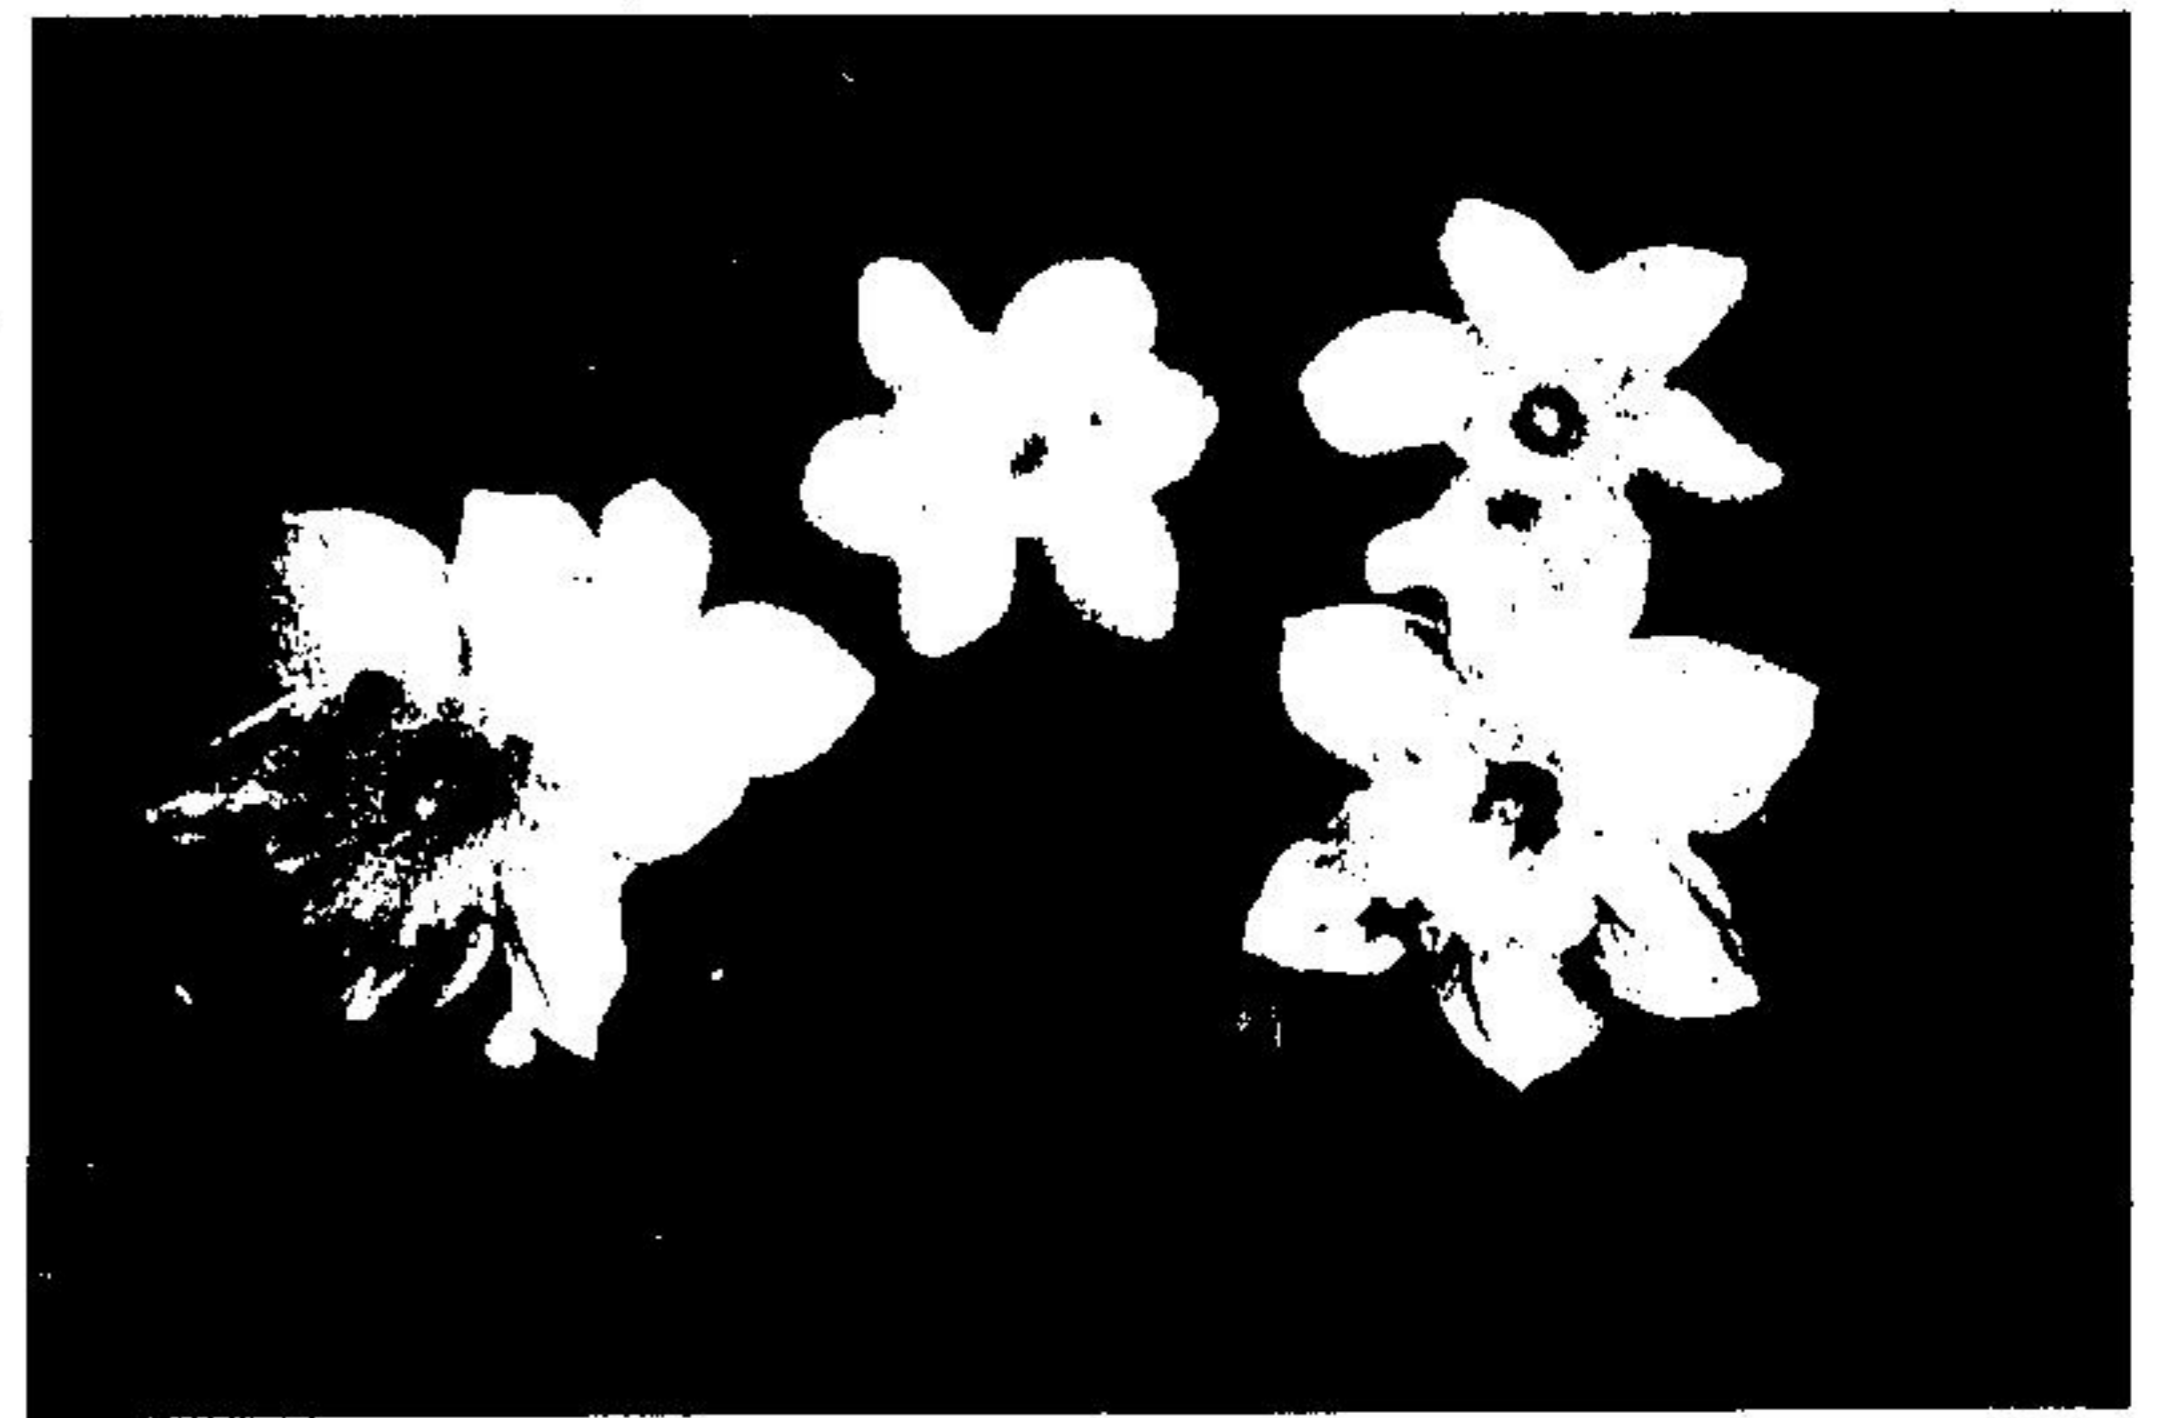

Renewal is in the air as spring sees the blossoms emerge with their promise of the growing season ahead. From the early crocuses through the later daffodils, tulips, flowering shrubs and tree blossoms, the plants provide fresh bright color that mixes ideally with the warm sun to create the beautiful spring season that we enjoy in this area.

*Dandelions are the yellow flower that take over the grass in this season but are still beautiful in their own way.*

*The woods also is a great place to see flowers. Here the blue violet soaks up the sun.*

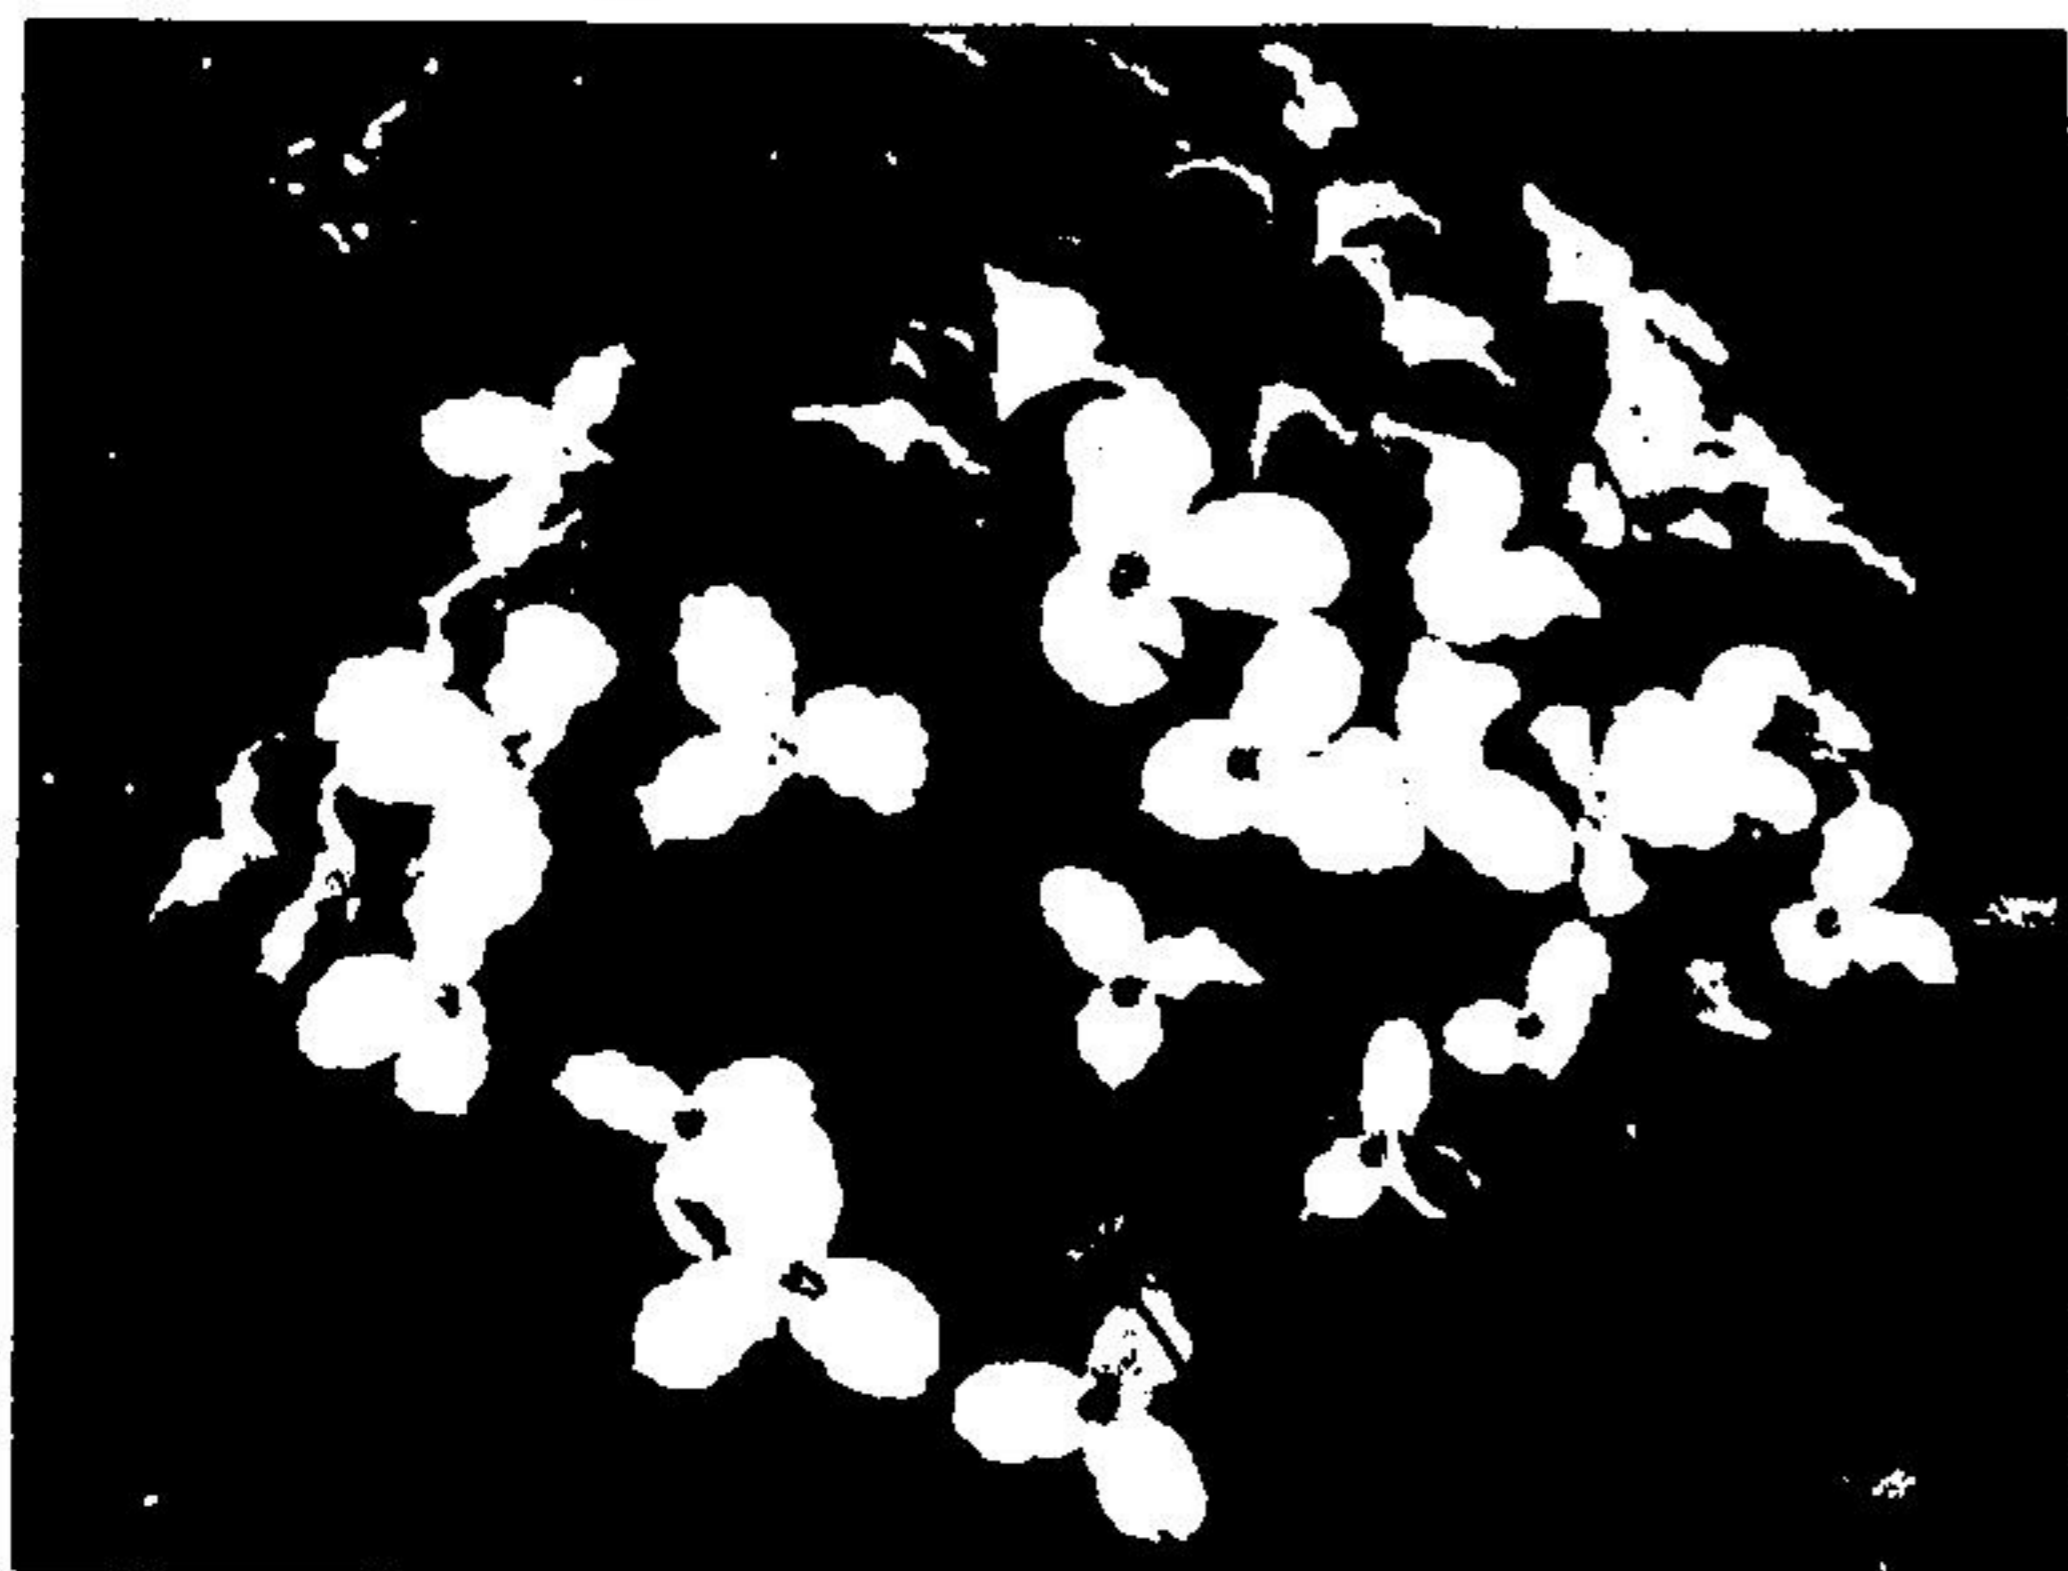

*People who start their gardening in the fall will be glad to see that their efforts have not gone to waste when the daffodils bloom.*

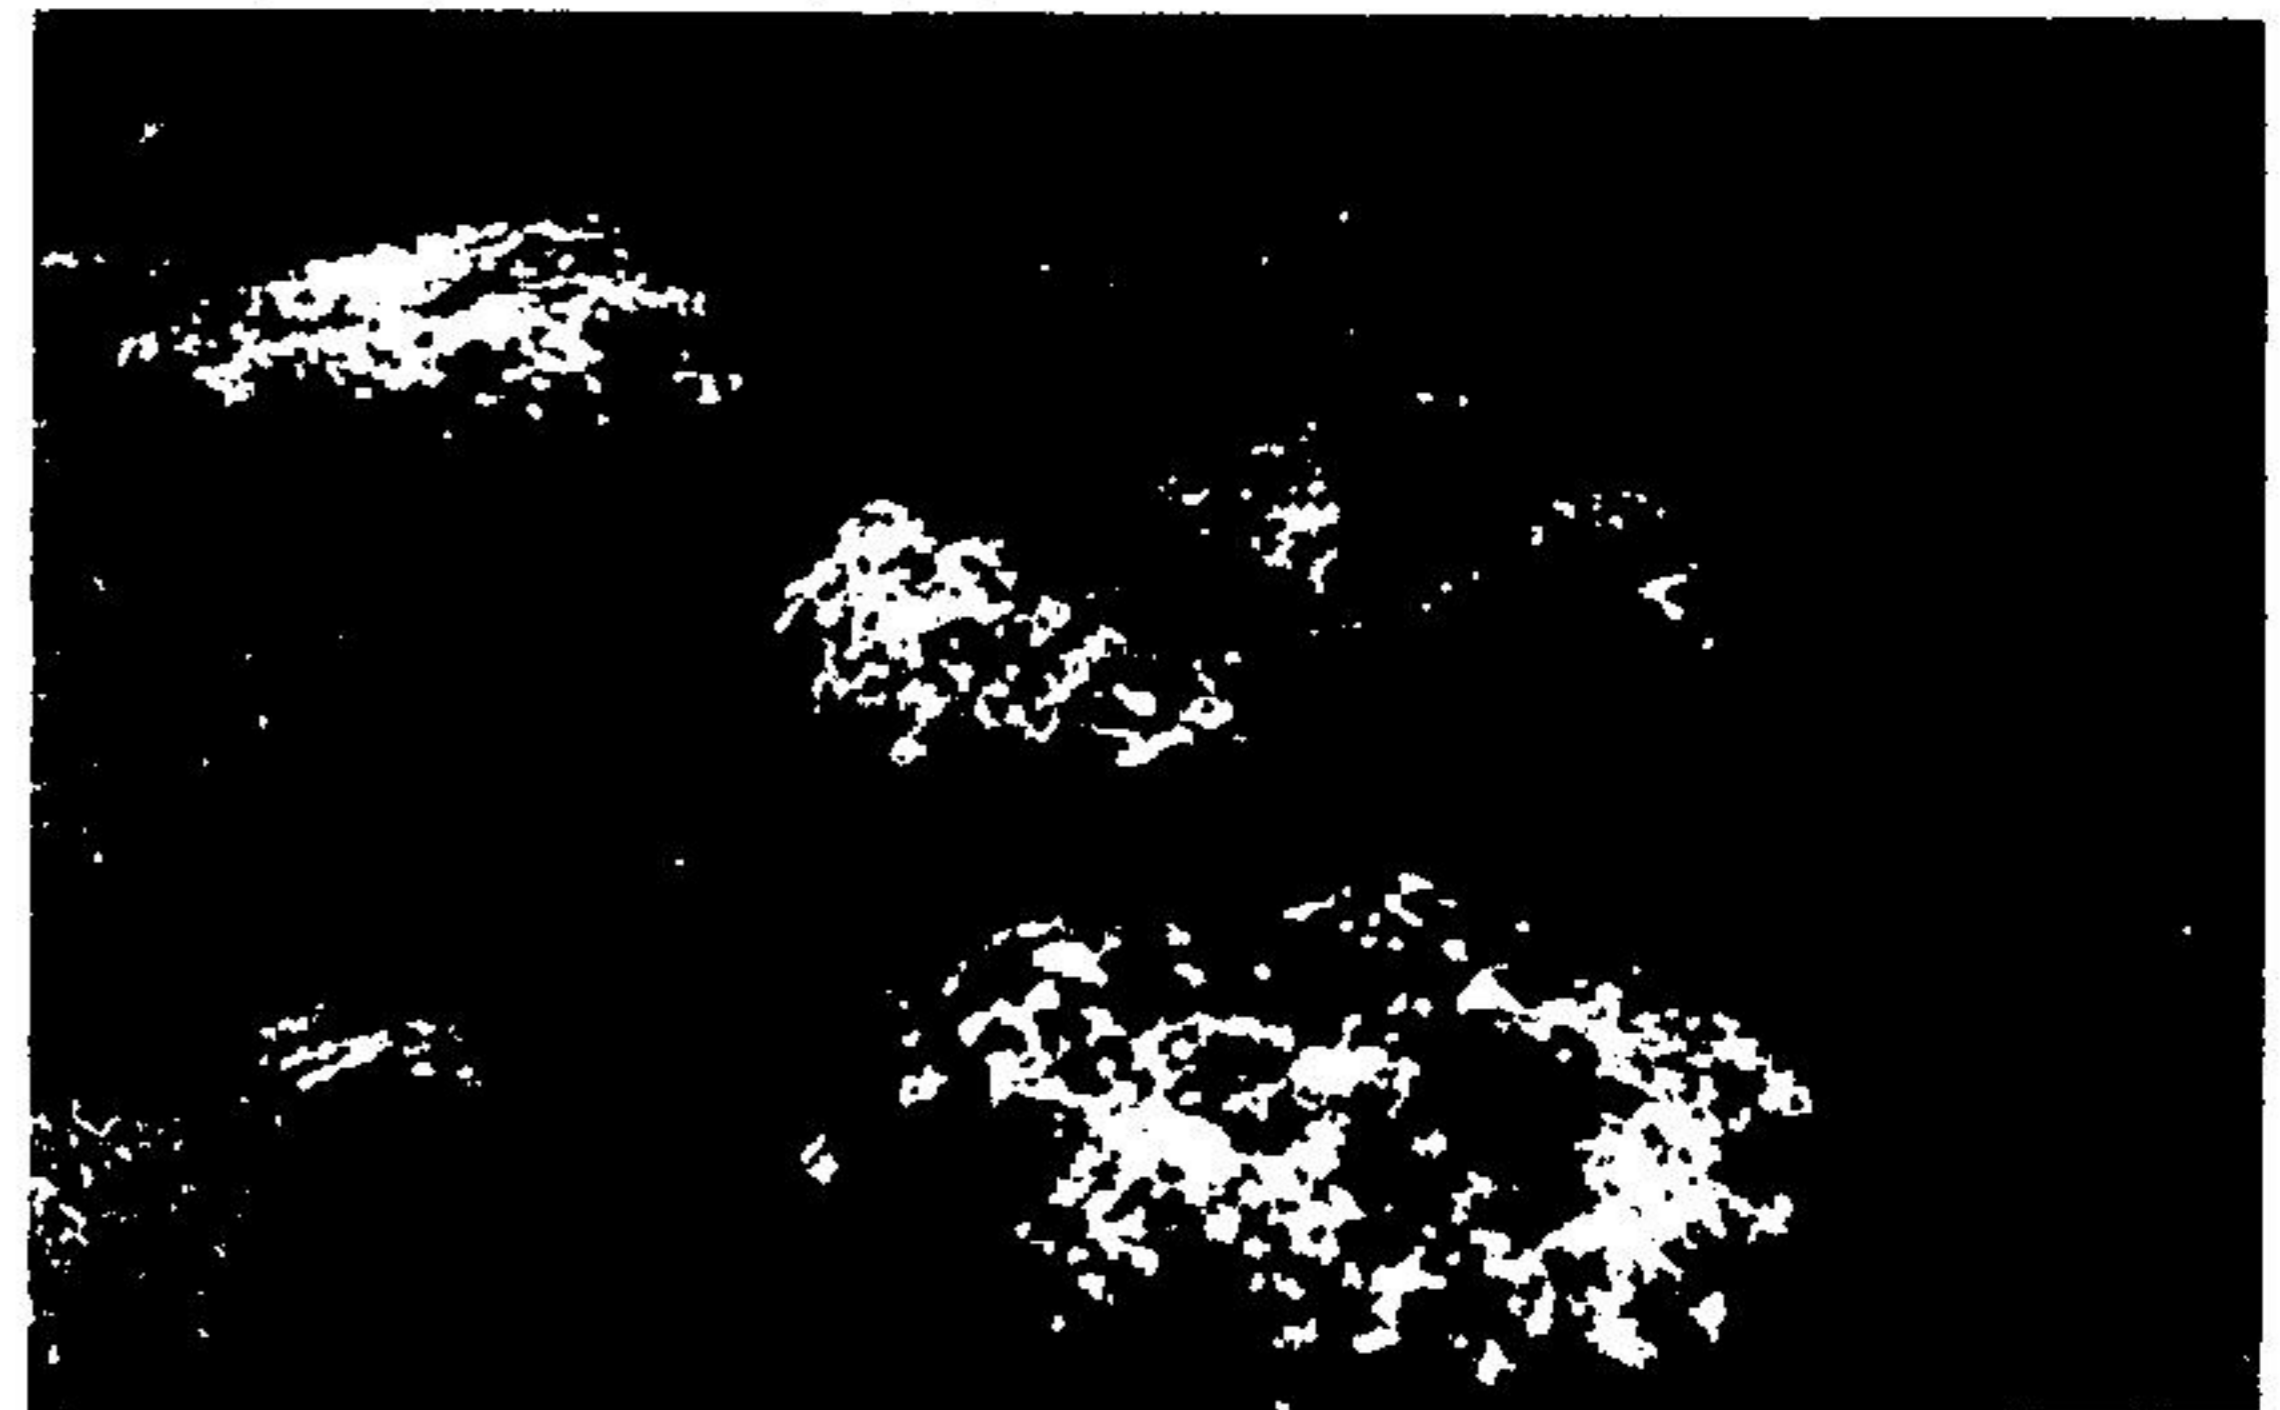

*You only see the blossoms of the pear tree from a distance but have you tried looking closer.*

*People this time of year like to get outside and start their gardening, to set the mood for spring.*

*Ontario's provincial flower the Trillium still grows in abundance and we hope will stay that way so don't pick them.*
