## FOR THE BEST BOTH PERFORMANCE AND RELIABILITY IT'S S.B.E.

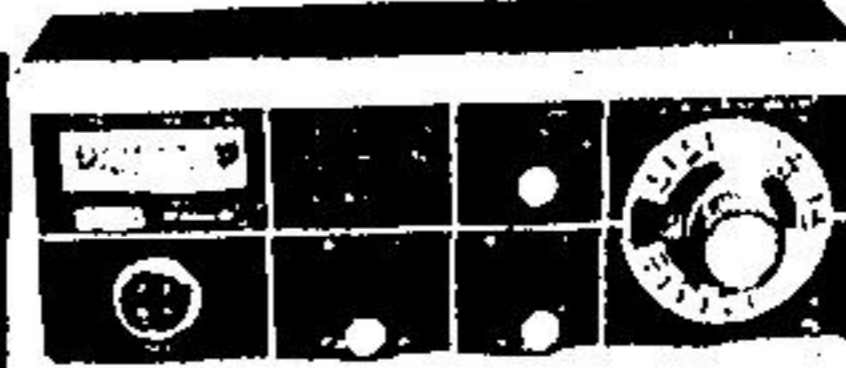

LIST \$430.00  
AVA SPECIAL **\$350<sup>00</sup>**

### SIDEBANDER II

SBE SIDEBANDER II. On SSB a crackling 25W in, 12W out p.p. On AM, 4W out along with high level modulation. Refinements abound! USB and LSB for 46 channels on SSB, 23 channels on AM. Synthesized frequencies so no crystals to buy. Highlights include: ANL w/switch - RF and AF gain controls - Clarifier - Squelch - Plenty of audio to handle noisy mobile

conditions or for public address use - Lighted panel meter checks power out/receive signal strength. Set is available in positive ground version. SIDEBANDER II has built-in noise limiter but has internal provision for SBE-1NB deluxe noise blunker accessory. Supplied with quality SBE dynamic microphone w/ coil cord/4 conductor plug. Usable as base station with auxiliary 115VAC power supply.

CAN BE CONVERTED TO 40 CHANNEL

LIST \$250.00  
AVA SPECIAL **\$200<sup>00</sup>**

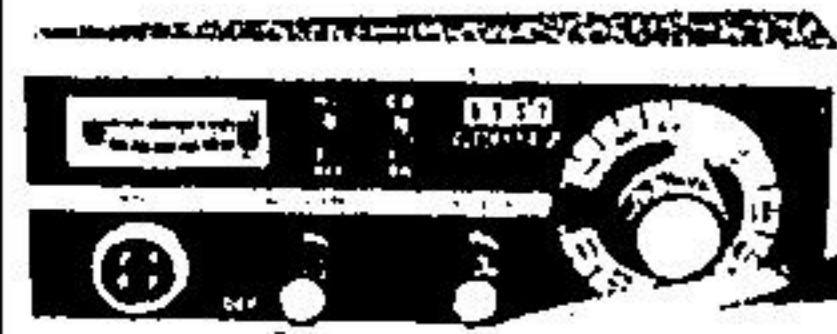

SAME AS ABOVE WITH DIGITAL MIC. LIST \$350.00  
AVA SPECIAL **\$280.00**

### FORMULA D

Digital frequency synthesis and for-in-the-future digital logic are just "openers" with FORMULA D. The double conversion receiver has the sensitivity and signal-to-noise ratio for weak signal reception, delivers 3.5 watts of audio that makes big sound on receive and PA modes, and deep modulation with crisp, get-through speech characteristics on transmit. Handy fingertip panel controls include: Audio tone - Audio volume - Delta

tune (brings in all-frequency signals) - Local/DX switch prevents overload by strong locals - Panel monitor meter checks Power out/Receive signal strength - Variable squelch - ANL w/switch - Dynamic mic. w/ coil cord/4 cond. plug is supplied with equipment. FORMULA D may be operated as a base station using available accessory 115AC supply. **Important!** Set operates on 13.8VDC with positive or negative ground.

CAN BE CONVERTED TO 40 CHANNEL

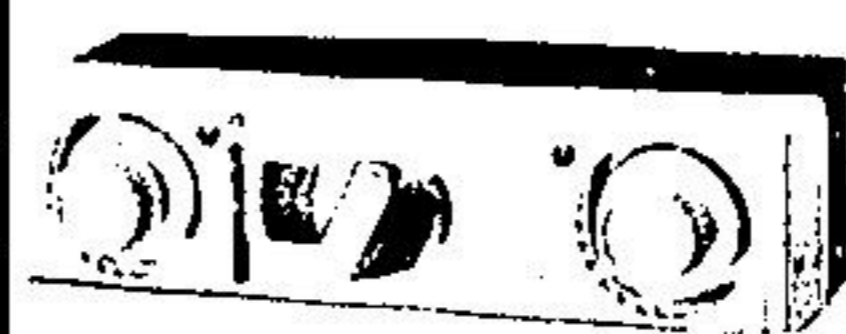

LIST \$200.00  
AVA SPECIAL **\$159<sup>95</sup>**

### CORTEZ

23 channels synthesized and advanced solid state throughout including field effect transistors (FET's). Double conversion receiver eliminates "image" responses, uses selective ceramic filter in IF for optimum rejection - has the sensitivity to dig those weak signals out of the noise. Wide-range automatic gain control prevents "blasting" by strong nearby stations. Squelch is fully adjustable - will open on very weak signals. Switchable noise

limiter provides substantial reduction of ignition, other impulse type noise. Plenty of audio to cope with noisy traffic and for assertive sound when PA is used. Fine looking in the best SBE design - tradition and small - with cabinet volume of less than 0.1 cubic foot. Equipment is supplied with dynamic mic w/ coil cord/4 cond plug. CORTEZ makes an excellent base station using power supply accessory.

CAN BE CONVERTED TO 40 CHANNEL

LIST \$170.00  
AVA SPECIAL **\$130<sup>00</sup>**

### CATALINA II

This top-light CB mobile, reduced in size to a mere three pound text-book-size package by skillfully applied space flight techniques. In this tiny cabinet is everything needed for reliable 2-way CB communications except 12 volt battery and antenna. Every user appreciates the operating simplicity and the fine transmitter and receiver stations that get the job done so well and the fact that all 23 CB channels are available instantly with-

out need to buy any crystals. Adjustable squelch mutes the unit on standby - automatic limiter copes with ignition noise. The big, big, back lighted channel numbers avoid channel selection confusion in dark car interiors. This powerful little book-size radio will fit handily even in the smallest car and its polished chrome panel surfaces will enhance any interior. The quality dynamic microphone with coil cord is permanently connected.

CAN BE CONVERTED TO 40 CHANNEL

LIST \$260.00  
AVA SPECIAL **\$180<sup>00</sup>**

### TRINIDAD II

TRINIDAD II represents a handsome, high utility unit in the middle price range that is ideal for base station service wherever 115VAC power is available - at home, in den, shop, office, warehouse. The Public Address Paging function provided can also be an important adjunct for many of these applications. TRINIDAD II will also switch over to emergency, rear connected 12 volt battery should AC power fail.

The set gives full 23 channel synthesized (no crystals needed) operation - has a transmitter with full power limit and high modulation and a smooth performing receiver. Operating aids include back lighted panel meter to observe transmitter power output and strength of incoming signals - adjustable squelch and volume - built-in automatic noise limiter. Unit is supplied with quality dynamic microphone w/ coil cord/4 conductor plug.

CAN BE CONVERTED TO 40 CHANNEL

LIST \$170.00  
AVA SPECIAL **\$130<sup>00</sup>**

### SBE BRUTE

The SBE BRUTE is a fully synthesized 23 channel AM CB transceiver, designed for modern mobile communications. Although the BRUTE is small in size, it contains all the features of standard-sized CB transceivers. The unit may be operated from 13.8 VDC, positive or negative ground. It may also be used at home with a base station power supply. Top selectivity is achieved through the use of the 4 pole, 455 kHz ceramic

filter, enabling the unit to reject adjacent channel interference. A built-in PA system and an external speaker assembly is provided for outside operation. A lighted channel selector facilitates night use and a red transmit light indicates "on the air" transmission. The BRUTE comes with a rugged mike, mounting bracket, mike hanger, screws, speaker plug, and a detailed instruction/installation manual.
