## Poolchem Swimming Pool Chemicals

### POOLCHEM

#### Poolchem Stabilized Chlorine Concentrate Granular

Poolchem Stabilized Chlorine Concentrate Granular is a stabilized chlorinated cyanurate in granular form. In addition to supplying chlorine to pool water it replaces the stabilizer and conditioner which is lost through backwashing. In stabilized pools use approximately two ounces per day, per 10,000 gallons of water, broadcast directly on the pool water. The pool can be used immediately after addition.

It is completely soluble leaving no residue to produce scale or increase the filter load. Poolchem Chlorine Concentrate is very stable. It does not lose its strength in storage and does not affect the pH of the water. Poolchem Granular Concentrate can be used for super-chlorination.

#### Poolchem Stabilizer and Conditioner

Poolchem Stabilizer and Conditioner is added to pool water to shield the chlorine from loss due to sunlight. It is added to water only once at the rate of 1 lb. per 5,000 gallons. The Stabilizer and Conditioner remains in the water indefinitely and does not have to be replaced each year if water is not changed. Poolchem Stabilizer and Conditioner is completely soluble. However it takes up to 48 hours to dissolve. The filter should not be backwashed until it's all dissolved. The pool can be used immediately after addition even though the stabilizer is not completely dissolved.
