Keep extra bulbs on hand at this bargain price.

# 1.79

Our Reg. 2.19

## Make Your Home Appliances Last Longer

How can you make your home appliances last longer? Just take care of them. It's as simple as that. Most modern day appliances require little maintenance to keep them running because of their sealed motor drives and factory lubrication. But if you mistreat them and fail to keep them clean, they're likely to develop trouble and wear out sooner than they should.

If you take care of your appliances they'll last a long time. But even the best of appliances given the very best of care won't work forever. So it's a smart idea to regularly budget money for an appliance replacement fund. Budget planning should be part of your appliance maintenance program.

### Humidifier

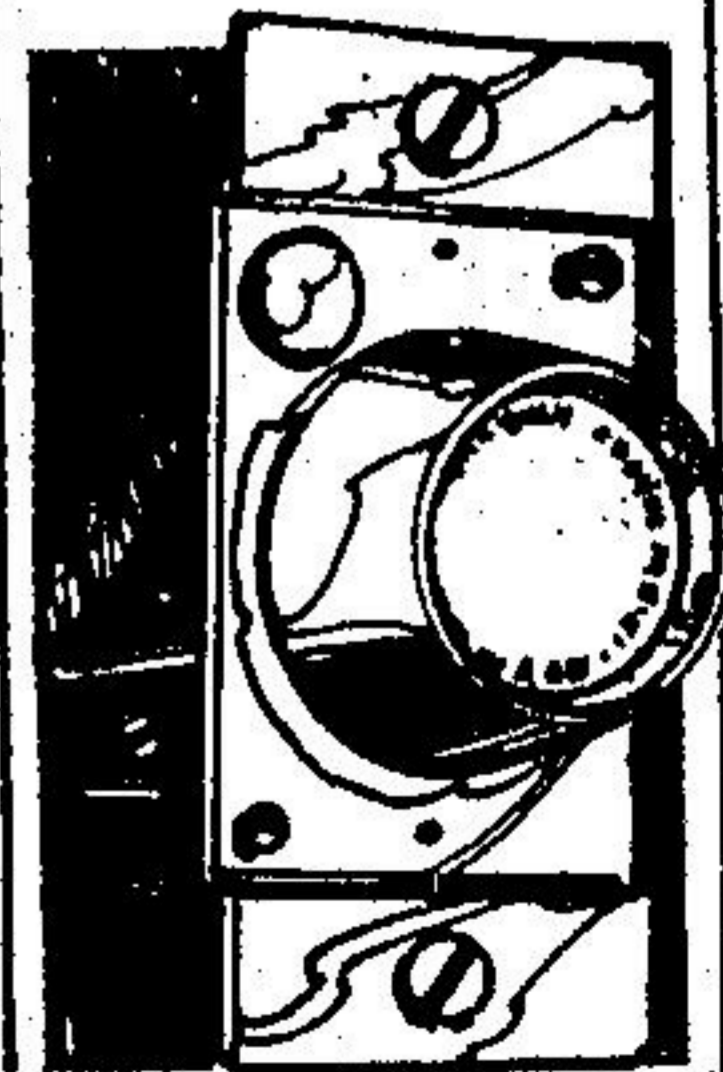

Don't place unit near outside cold wall. Put it close to a concentrated source of heat to help distribute moisture more quickly. Don't place it too near draperies or curtains; air movement could pull them against grille and cut off air flow.

### Dimmer Switch

Give your lighting an inexpensive touch you'll really enjoy. Full control from bright right down to dim, to suit your mood, or the occasion. 600 watt. 3674-107-5
