

Home of the Handyman

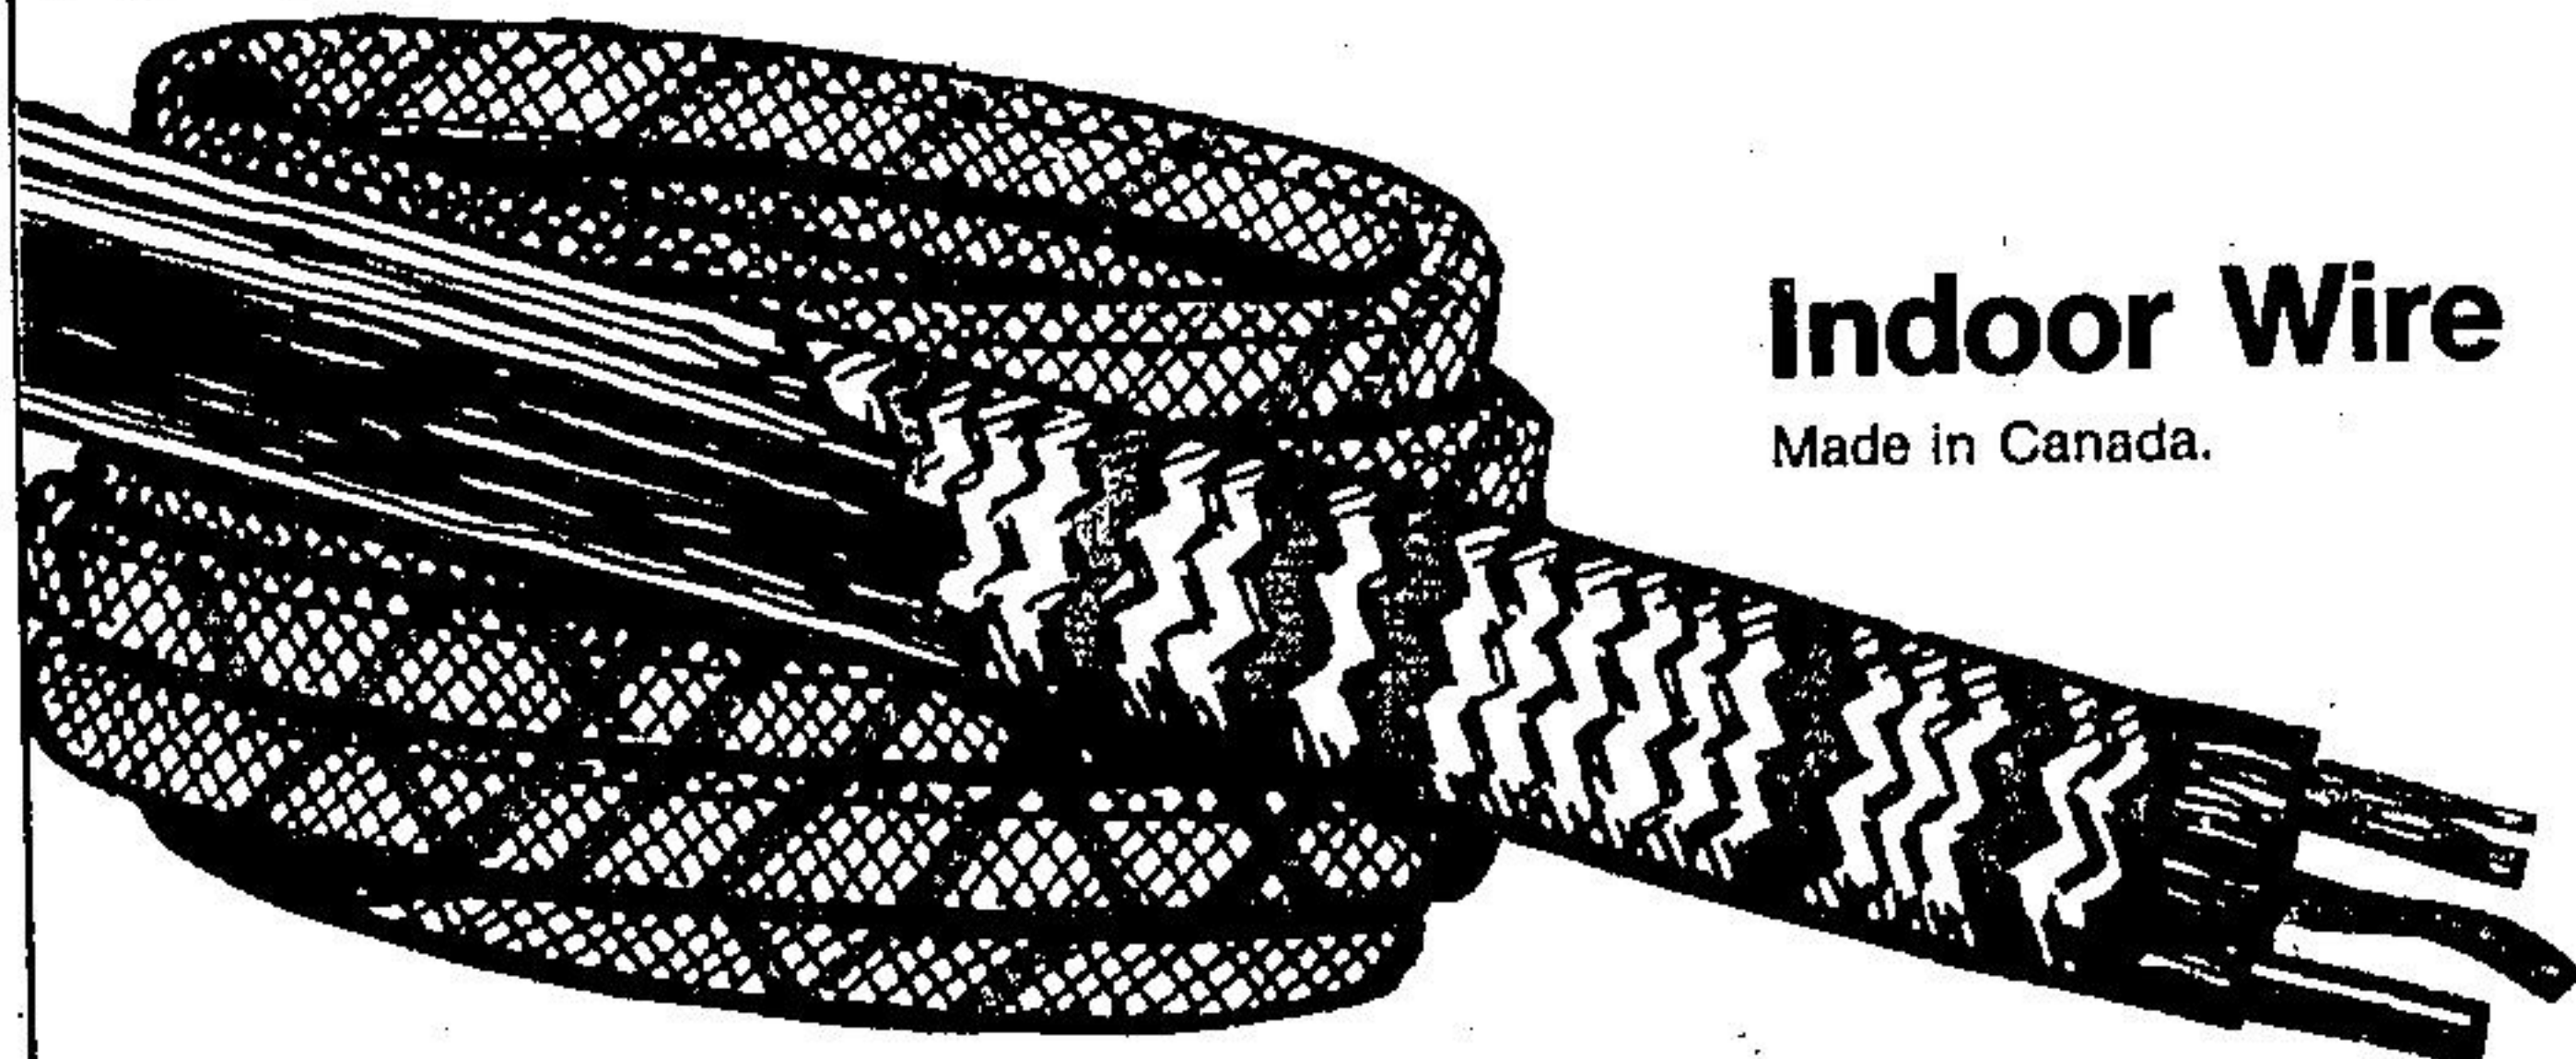

Cont'd from page 2

Corrects moisture - induced electrical short circuits. This product should be a must for a spot in your cleaning cupboard or workshop.

Save yourself a buck and add a most essential tool to your collection - a Benchmark propane 2 pc. torch kit. Plenty of concentrated heat is often needed for repair jobs. The propane torch consisting of a burner unit mounted on steel cylinder filled with propane fuel has replaced the gas blow torch. The size of the flame is controlled by a knob on the burner head. Air mixture is controlled automatically.

Open the valve, strike a match or use a spark lighter and you are in business. The torch comes with a regular blowtorch head that delivers a relatively large flame for heavy work such as soldering. A pencil burner is available to provide a narrower flame for fine work. A flame spreader is available for a wide flame for such work as burning off paint. A cutting tip goes on like the soldering tip, makes your torch useful for cutting tile, wood-burning and removing putty. In short a very versatile, safe tool.
