cont'd from page 3

Scotts principal types of fertilizer with analysis and coverage (we're selling coverage not weight) are:

Scotts Turf Builder - 27-3-3
The first number is 27% nitrogen, then 3% phosphorus and 3% potash. The remaining 67% is a lightweight vermiculite carrier, to which is bonded the dry and liquid nutrients. The bag weighs 14.3 pounds and has a 4300 sq. ft. coverage. It can be applied from early spring to late fall when grass is wet or dry. As it will not burn, there is no need to water in.

Scotts Turf Builder Plus 2 26-3-3
This has the same analysis and coverage and weighs 14.85 lbs, but has the addition of 2,4 -D weed killer. It should not be applied until the weeds are actively growing. It is labour saving: One trip across the lawn eliminates weeds and thickens grass.

Scotts Turf Builder Plus Halts - 25-3-3
It weighs 18.4 lbs and has the same coverage but has ben-sulide added to prevent crabgrass. It must be applied before the end of May in most areas to prevent the annual crabgrass seeds from germinating.

Scotts Starter Fertilizer 18-24-3
The bag weighs 4.9 pounds and has a 1076 sq. ft. coverage. It should be used before planting seed or laying sod.
