

Comparing the depth penetration of Cuprinol with Olympic and other leading stain. Cuprinol proved to live at least 3 times the depth. This means deep trouble for insects, fungi and other wood destroyers.

If its worth staining...its worth preserving.

Armor All makes your world less rotten. **Fight Rot**

Rot is a monster that attacks everything made of rubber, vinyl, plaster, leather, wood - any polymer material. Rot deteriorates surfaces, cracking, fading, and discoloring. Rot feeds on your car, tearing at the very fibres of your tires, weatherstripping, wiper blades, vinyl top, and vinyl interior.

Rot gets into your house, in the garage, on the patio, and into all your goods made of rubber, plastic, vinyl, leather wood. He's everywhere. But now you can fight Rot everywhere with Armor All Protectant, a remarkable achievement of science. Armor All Protectant is a patented polymer spray that penetrates surfaces and actually intertwines with the fibres of any polymer material, forming a lasting shield of protection against Rot.

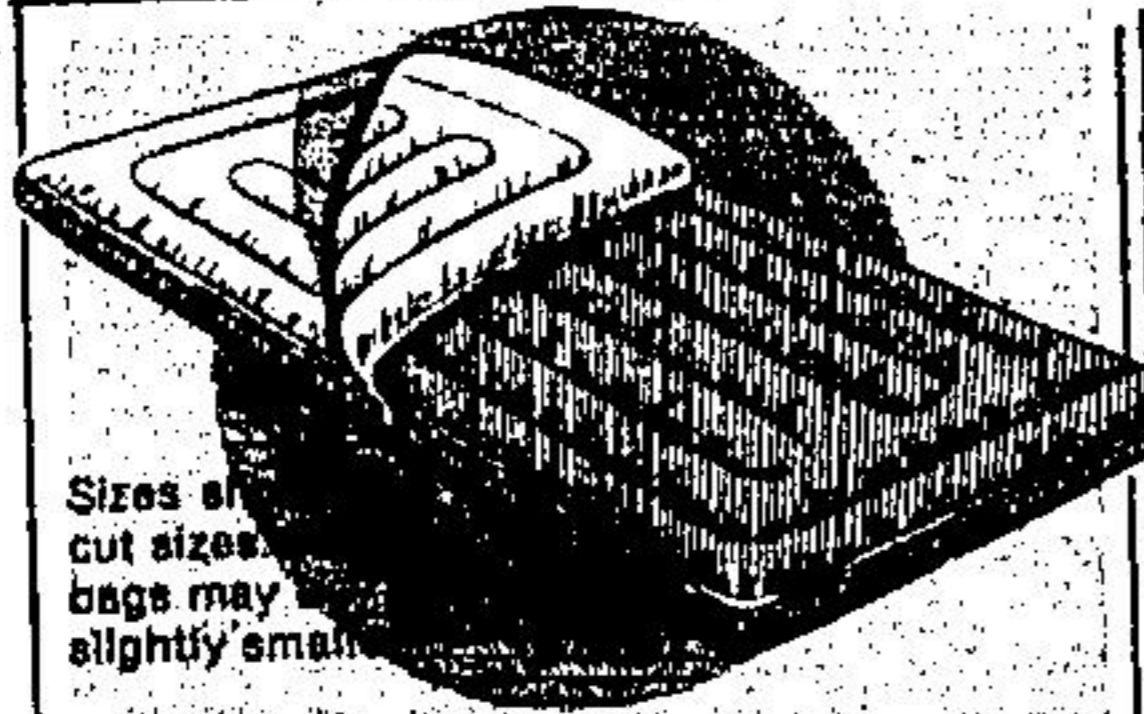

Rot takes away life. Armor All Protectant restores life, returning treated materials to their fresh, original look.

Nothing - wax, polish or cover-up - fights Rot and restores life like Armor All Protectant.
