

Useful aids to ensure good winter motoring

These useful aids used with a timer in a safe manner will almost guarantee that a properly maintained vehicle will start every time.

- A block heater at \$30-\$50
- A trickle charger at \$40-\$90
- A battery warmer at \$10-\$20
- Remember—any battery functions best when it's warm.
- Before you get into your car do a quick walk-around check. Clean all windows, lights, mirrors. Look for drips, leaks and flat tires, etc.
- Before you set off check the weather. If it's bad and you can postpone your trip — do so.
- Listen to the traffic and road reports so you can avoid traffic jams.
- Don't warm your car up for too long. As soon as it will idle normally and the

windows are clear, move off slowly and take it easy for a few miles until your engine and drive train warm up together.

If you are stopped in traffic, shift to neutral so that your driving wheels don't spin.

—When you park...reverse into your spot so that the battery is handy if you need a boost later - this is a safety precaution as well.

—A hairdryer, warm water or a de-icer will help open frozen doors or trunk. Don't forget to dry and treat weather stripping after.

—Try to keep your tank at least half full to prevent condensation. Use a gas line antifreeze during every other fill up.

—A jack can be helpful in getting "unstuck" from ruts, etc. Use it carefully.
