 (Halton No. 3) 3 miles north of Shell. CALL FOR APPT.

**Cold weather tips**

When the going gets cold this winter, make sure your car keeps going. Get it ready now for better driving efficiency and improved economy. Start with this easy-to-follow check list.

**Coolant:** Be certain it is strong enough for cold temperatures. Drain and flush cooling system if coolant appears rusty. Periodically add water to maintain proper coolant and water mix.

**Engine oil:** Truly the lifeblood of your car. Check for proper oil level by reading the oil dip stick found near oil fill cap. Keeping oil level full helps your car run more efficiently. This can now be easily and cleaning done by using 10W-30 or 10W-40 Gasoline Saving motor oil in handy resealable one-quart plastic containers. A consistently 'full' oil level adds to overall engine performance. For diesel car owners,

DSL, the motor oil engineered for automobile diesel engines, offers complete diesel engine protection.

**Oil Change:** It should be near oil change time especially at summer's end. Changing oil regularly at every 3500 miles helps engines run better because 90 per cent of driving is of stop-and-go variety creating higher running temperatures and increased wear on the engine as well as the oil.

**Carburetor and choke:** Clean the carburetor and reset the choke to avoid over-fueling and a loss of fuel economy. A malfunctioning choke will cause difficult start-up in cold weather.

**Battery:** Maintain proper water levels. Use a wire brush to free terminals of any acidic build up. Carefully tighten cables to terminals.
