crafts period,

FALL PLANTING EXCELLENT -FOR SHRUBS, SAY NURSERIES

gest that either time is successful under most conditions. Fall transplanting is a good time to plant primarily for two reas-

"When is the best time to plant?" Most nurserymen will sug-

One of the most common questions asked nurserymen is

Firstly, your nurseryman is not as rushed and he has more time to help you make your selections.

GENERALLY TOP CHOICE

Secondly, the selection of plant material is generally top choice. It is freshly dug, carefully selected and with proper care will be ready to grow first thing in the spring when conditions are ideal for optimum growth,

Soil preparation is similar to spring planting. The soil should be well worked, friable and moist. Where the soil is a heavy clay, the most practical method is to remove the existing soil and replace it with now top soil. The size of the hole will depend on the size of the plant. The larger the root system the larger the hole, but should not be less than eighteen inches in depth and width.

GOOD SOAKING WEEKLY

After planting the plants must be kept well watered until freeze-up. This is best accomplished by a good rooking once a week rather than a light sprinkle each day.

To avoid the spring rush, consult your local nurseryman now. He will be glad to help you prepare your plan and select the plant material to complete it.
