PANELLING:

Follow these simple guide lines and then you'll understand the basics of panelling.

1. Nails should be placed as close as possible to all four edges of the panel. Also, panels should be nailed in the grooves to the wood strapping which is at 16-inch centres on the wall. IMPORTANT: All nails should be spaced 6-inches apart to avoid warping. Use coloured nails that match the panel colour.
2. If you're using Panel Adhesive, apply a complete bead of adhesive along each edge, or at any point touching the stud or the strapping. NOTE: to avoid panel slipping, nail at each end of panel, top and bottom.
