'Aphrodisiac' from antlers big business

Hunting for deer high above Methven

Around the World in 380 Days

Fifth in a series

By STEPHEN FROST Herald Staff Writer After leaving New Zealand's Mount Cook, I hitchhiked to Timaru on the east coast of the South Island, passing through beautiful footbills and rolling countryside, some of the best

on the island.

Two months previous, I had been hitching a ride to my job in Hakataramea and met a fellow from Timaru who invited me to drop in if I happened to be passing through again. Wayne Thomas was his name, and he is a good example of how friendly people in New

things are improving.

he is quick to point out that

To gain an understanding of

the town engineer's widely-

varying responsibilities, one

must consider the mainten-

ance of town roads, parks and

cemeteries and the collection

of solid waste; heading this

already hefty list of duties,

however, is the job Mr. Austin

considers his chief responsibi-

lity, one which makes the title

of "town engineer' somewhat

misleading.

than the private sector.

better.

Municipal government and

Zealand can be.

Timaru itself is a smallish coastal town with a lot of character, and a lot of characters in it. One evening, Wayne and I and Craig, a friend of his, went on a tour of Timaru's pubs and surprisingly, they were much like those in Georgetown. I got up feeling rather poorly and blamed it on the poor quality of New Zealand beer.

After spending a few days in Timaru I left for my favorite city. Christchurch, to recuperate and get a new job from Vic.

The job was on a farm in Methyen, about an hour and a half from Christchurch, and it was the only farm John and I worked together. The boss

has been made.

Morris Molloy, was a wheat farmer and one of the most pleasant farmers I worked for while travelling. John and I helped him harvest his barley. wheat and peas. FARM MEALS

I hadn't seen John for quite a white and when he showed up on the farm the first night, all he could do was laugh at me. I had ballooned from my fighting weight of 130 pounds to about 146. Unfortunately, it was almost all on my stomach and was the direct result of eating farm meals, which tend to be very rich and plentiful.

It was in Methven that I met some deer hunters who asked me if I wanted to go hunting with them, and as I had never been in my life, I accepted.

For the description of the day's hunt I'll quote directly from my journal:

"Got up this morning at 4:30 and drove the '53 Bedford truck into town to meet Donald. From there, we proceeded to his friend's place up in the mountains and then drove and walked for an hour back into the hills to a small valley, where we waited for the sun to come up.

"We spent the rest of the day going up and down bloody mountains, through bush that has undergrowth so thick, and has so much brambles, ferns, gorse and fallen wood, that walking in it is difficult, if not damn near impossible.

"Did I get anything, you ask, other than a lot of strenuous exercise? Only if you count the deer dung we kept finding, which probably reflected their thoughts on our hunting abili-

Mr. Austin commented that

his job in these times of fiscal

restraint is often one of mak-

ing the most of what's avail-

able. For example, he said, the

provincial ministry of

transportation and communi-

cations subsidizes road recon-

struction costs in Halton Hills

by up to 50 per cent, but this

year cut back on its funding

and thus forced the town to

trim its own capital budget.

Mr. Austin graduated from

the University of Guelph with a

degree in Civil Engineering in

1970 and spent four years with

the ministry before signing on

as Halton Hills' second town

engineer in 1974, succeeding

former engineer and ex-

councillor Peter Morris, He is

lives in Acton.

avoid them in the future."

through this near impassable bush and I was ready to shoot the fellow I went with, I'm

However my next outing was more successful. A week later we went hunting some dinner on Mount Hutt, a ski resort not far from the farm.

It was at the bottom of a gorge, high on the mountain that Donald spotted a hind through his binoculars. We went down a tree-covered slope on the opposite side of the gorge from the deer. The slope was incredibly steep and dropped about 800 feet vertically.

RED DEER A thousand yards up the other side, we came out of the bush into some high scrub, directly across from where the hind was sitting, her head and neck showing.

It was a Red deer and an easy shot, only 35 yards, and it took us a little over half an hour to butcher and skin it. We took the whole haunch, the front legs and shoulders plus assorted odds and ends up with It took us two and a half

hours to carry the meat up a slope of about 40 to 45 degrees with about 1,200 feet of "vertical" in it. I don't remember ever being so tired in all my life, but the venison was well worth it. It was also a nice change from lamb and the odd sheep's tongue. Morris, the farmer, was into

deer in a different way. He farmed deer on the Banks Peninsula just east of Christ-

Now you ask how can you farm deer? Well, it isn't for their meat but their horns. A stag develops a new set of horns every year and it is in the beginning stages of this development that the farmer is interested. The soft stage is called vel-

vet and is used by the South Koreans as an aphrodisiae after it is processed. The process includes cooking the velvet, after it is cut from the stags, for 48 hours at 140 degrees centigrade. It loses 70 per cent of its weight and sells at \$140 an ounce.

A good five-year old stag is worth \$2,500 and will yield up to 14 pounds of unprocessed velvet a year, worth \$100 a pound to the Korean buyers. A yet has to be there when

Methyen, often took us for tours back up into New Zealand's around the back of Kount Hutt and up the Rakila Gorge. you cut the velvet off and you fields which aren't rendy to must be sure not to damage it. If the velvet gets a small hole in it, it devalues to about \$18 a

The stags are kept in large fields enclosed entirely by seven foot fencing and seem to be quite at home in them.

pound.

ENCLOSED HERDS When the stags are harvested in December and January, they are herded into the yards which, are all enclosed and fairly dark. The stags are more docile in the darkness and easier to handle.

The vet injects the stag with a tranquillizer and the stag is led into a small shed and belted to the wall. Here a

bring in. They tend to get jealous of the ones with velvet and may damage them in butting contests. Not all stags are ready to harvest the same day or even week, and that's why separate fields are essen-

Deer farming in New Zealand is a multi-million dollar business with some of the largest herds numbering 3,500. It really is amazing that an aphrodisiac (supposedly) can generate that amount of revenue and business.

Morris plans to expand his herd by breeding rather than buying stock and, when John and I were there, he had about

22 hinds and 12 stags which he local injection just above the eves anaesthetizes the crown, which is just below the velvet. The velvet is then cut off above the crown, with great care being taken to avoid cutting the crown, since if it is damag-

Seniors Week

Halton regional council has approved a recommendation declaring the week June 15 to 21 "Senior Citizens" Week". The request was made by Keith Norton, minister of community and social services so that local activities for senior citizens will be encouraged.

Newcomers Club final

The Georgetown Newcomers Club held its end-ofseason function June 3 at the North Halton Golf and Country Club. The luncheon was attended by 25 ladies and brought to a conclusion a successful season of varied activities. The club will be starting up again in September, and all newcomers are welcome to join the club then. Information on the starting date will be available in the Y fall program and in local media.

Caledon bridge club
