- 19. When you leave a room, make sure you turn off the

12. Gas, oil, and coal all make

- 13. Another word for garbage
- 18. What all plastics are made from.

How Many Trees In Your House?

Paper for newspaper, magazines, and cardboard is made from trees. It takes 17 tall trees to make one ton of paper. It also takes energy to cut the trees, transport them to the paper mill, and to run the machines that make paper.

How many trees do you think were needed to make the paper that comes into your house?

To find out, collect all the newspapers and magazines delivered to your home for one week. (You can also include paper bags and cardboard.) Weigh them on a scale.

- How much paper is that over one month? A year?
- How many trees are necessary to make your family's yearly supply of paper? (Hint: 2000 pounds equals one ton)
- Is that more or less paper than your friend's family?
- Can you think of any way to reduce that amount of paper?
- Can you think of any ways you and your family can use the paper instead of throwing it out?

HOW TO PLAY WITH FIRE AND NOT GET BURNED

For safety and efficiency, wood that is to be burned in a fireplace or woodstove should be air-dried and have a moisture content of approximately 20%. To avoid the possibility of getting "green" new wood, purchase (or cut) your wood a year before you plan to use it.
