

What can warm and friendly gas do for you today?

There's a lot more to providing the benefits of natural gas to more than half a million homes than just piping the gas.

There's the question of providing our homes and industry and institutions with efficient space heating and water heating equipment.

There's service, both routine and emergency, to keep the warmth flowing.

There's the urgent need to help our customers conserve energy. And there's the big problem of the future, and the role Union Gas will play to provide secure and dependable energy.

Union Gas and its 2,360 employees are ready, and geared up and eager to serve you. "What can warm and friendly gas do for you today?" is a lot more than a catch phrase.

A secure supply of natural gas.

Ample natural gas is coming to us

from the West. And Union Gas is installing many miles of new service mains, so that warm and friendly gas can do more for homes, business and institutions in Southwestern Ontario.

An astonishing variety of heating equipment for sale.

Most people think of basement furnaces when they think of gas heating. But Union Gas can supply complete forced air heating systems, hot water heating systems, wall furnaces, conversion burners and space heaters.

There's a whole lot that warm and friendly gas can do for you.

To help you use less natural gas.

We're as interested as you are in seeing energy consumption and energy costs kept under control.

So we've approved a number of

home insulation dealers to sell and install ceiling insulation that can be paid for over two years on your Union Gas bill. It's open to any homeowner with an approved credit rating, whether or not you're a gas customer.

Expert service.

We offer parts and service for natural gas appliances, heating equipment and water heaters.

And 24-hour-a-day, seven-day-a-week emergency service.

"Warmer Winter" Service Package.

And we now have a "Warmer Winter" Service Package. A Union Gas expert will inspect, clean and adjust your natural gas forced warm air heating system, give it a clean bill of health or recommend the necessary repairs to maintain its safety and efficiency. If repairs or replacement are necessary, parts and labour are extra.

An Equal Billing Budget Plan.

If we can help you run your household budgeting a little more conveniently, we're glad to. So we have an Equal Billing Plan.

It allows you to pay for your home heating, water heating and other natural gas consumption in 10 equal payments, from September through June. The charge is based on your previous gas consumption. Weather conditions, consumption and rate changes are continuously monitored, so that if your actual cost is lower or higher at the end of June billing, you'll be credited or billed in July.

Convenient bill paying.

The simplest way to pay your bill is by mail. But if you prefer, any bank or trust company will accept your payment. Or you can visit Union Gas and pay directly.
