Poppy Chairman's Report
Poppy Report - Poppy Campaign - Poppy - Lest We Forget! This is what the Legion is all about - the care of our veterans when they come on hard times and the means by which we are able to help them and their dependants, which is the Poppy

Campaign.

Our Town Citizens, Merchants and Business People have come through with flying colours as usual and I have many thank-you letters to write.

The small band of troopers who helped with this year's Poppy Campaign worked hard, had fun and laughter and a few jokes to lighten up our day - in a word comradeship.

Thanks go to: Emily Sargent, Ada Ward, Mary Farrell, Orval Paul, Dave McNeilly, Chuck Tutty, John Narey, Jean Harley,

Marjorie Tutty, Flo Carswell, Boyd Lantz, Lew Ward, Bob McNeilly, Monica Southon, John Nichols, Shell Lawr (who shouldn't have because he was sick), Ross Hope, Bruce Hope.

Keith Ewing, Ray Clarke, Gwyneth Thomson, Mae Lawr, June Ross, Nadine Bradley, Pauline McNeilly, Norma Lawrence, Dot (and I don't know her second name), Roy Bradley, Max Jack, Mac McLean, Stu Hall, Marg Clarke, Connie Darling, Dick Appleyard, Sally Plackett, Jim Watson, Priscilla

Reyce, Harry Bottoms, Stella Sucee, Dick Sucee, Trudy Paul, Mike Sargent, Bud Haines, Gord Brown, Jean Reid, Audrey Martin, the Air Cadets from Squadron 756 and last but certainly not least Paul and Nancy Yates and Doug Norton.

There may have been one or two others that I don't have a note of, but my sincere thanks go to everyone who helped - and many of the foregoing came back again and again to the job they were doing.

Jean Narey

YES, WE ARE OPEN

during construction. We're building to serve you better, and apologize for any inconvenience.

Saturday 9:00-5:00

Computers Computer hardware

By SCOTT WILLIAMS

Computer hardware is a little like the hardware you find in a store: some people find it interesting for its own sake, but for most of us it's just the tools we need to do a job. A New York computer analyst once said that no-one in the world wants a 1/4 inch drill bit, what we want is 1/4 inch holes. It's the same with computer hardware: nobody really wants the computer, what they want is what the computer can do. They want to write letters, and play games, and balance their accounts. All these things belong in the realm of software.

There are really 4 levels to the computer hierarchy. At the top level is you - the computer user. And at the bottom level is the computer hardware. Hardware is tangible; you can see it and touch it. The middle two levels are occupied by software. The bottom level of software is the software that actually makes the computer work. This is the software that accepts characters from the keyboard, makes the computer beep, makes sure the disks are spinning, puts the pictures or letters on the display screen, and so on. This level of software is called the Operating System. It is not really useful software - it's just what you need to make the computer go. Examples of Operating System software are MS-DOS, Unix, and Xenix.

The second level of software - the top level - is the useful software - the stuff you use to actually accomplish anything. This layer is called application software. Games, word processors, spreadsheet programs, airline

COMPUTER CHIPS

reservation systems - all these are examples of application software.

When you're purchasing a computer, whether it's for the home or for the office, consider application software first. This is where you decide what you really want the software to do - what you want to achieve with your computer. Then find out what "platform" or "foundation" that application software needs. This platform will be a combination of hardware and operating system software. For most home applications, the platform will be a combination of hardware and operating system software made by Apple, or Commodore, or Atari. Or it will be PC-compatible hardware, with MS-DOS as the operating system. MS-DOS is operating system software that will only run on PC's and compatibles. We discussed what PC's, and clones, and compatibles were a few weeks ago.

In the coming weeks and months, we'll have the chance to look at a number of different kinds of software - and we'll see all the things you can achieve with your computer.

NEW EXTENDED
CHRISTMAS HOURS
Mon.-Sat. 9-6
Thurs. & Fri. 9-9
