Jaguar will build a production version of the C-X75 hybrid which will have an estimated top speed of 200 mph.

Jaguar to launch hybrid supercar

Jaguar has confirmed that it will launch the remarkable C-X75 concept car as an exclusive hybrid supercar.

Jaguar C-X75 will become the British marque's most advanced model to date.

It will offer performance on a par with the fastest production cars on the market, while adopting cutting-edge technology that offers remarkably economical running.

Jaguar expects this hybrid supercar to deliver incredibly low CO2 emissions of less than 99g/km while being able to achieve in excess of 200 mph.

In an unprecedented move, Jaguar C-X75 will be developed in association with Williams F1 who will provide their engineering expertise in areas including aerodynamics, carbon composite manufacture and hybrid technologies. This

association will be at the leading edge of British automotive engineering and innovation.

The supercar's chassis will be made of carbon-fibre to create an incredibly lightweight, yet rigidly strong structure.

Aiding the transition from concept to production vehicle is the choice of powertrain. Jaguar continues to develop the use of the micro-turbine technology that was showcased in the original concept C-X75. Jaguar's parent company Tata has taken a significant stake in Bladon Jets, and will develop this very advanced technology as a medium-term aspiration that will play a part in Jaguars of the future.
