Leaves pose a hazard to drivers

Autumn is the picture-perfect time of year when many drivers take to the road to view the autumn colors. The leaves are beautiful to see, but when wet or in piles on the roads, they present driving hazards unique to the season.

Most motorists know that puddles or standing water can cause loss of control, and they adjust their driving accordingly. But fewer drivers, especially inexperienced ones or drivers new to an area with heavy foliage, are aware of the dangers of wet leaves.

A single layer of wet leaves can make braking, steering and stopping difficult. This effect is particularly dangerous at intersections and is intensified at downhill stop signs. Acceleration can be affected, too. Fishtailing can result on leaf-strewn interstate entrance ramps and other areas where hard accelerations may be necessary.

Even when dry, leaves can present a challenge. Piles of leaves can obscure potholes, curbs and street markings and even present a fire hazard should leaves contact a hot muffler or tailpipe.

"Add these hazards to the fact that road conditions can change from ideal to miserable in a matter of minutes, and what you have is a potentially dangerous situation," said Patty Kettles, Manager, Marketing and Communications, Be Car Care Aware.

Drivers are reminded of the hazard and should prepare for fall driving conditions by having their vehicles' tires, brakes and wipers checked before heading out on the road.

Tires can affect the car's ride, handling, traction and safety, and are a critical connection between the car and the road in all types of driving conditions. To maximize tire life and safety, check the inflation pressure and the tread depth, and inspect the sidewalls for cracks or punctures. As a general rule, tires should be rotated and balanced every 10,000 kilometres.

The brake system is the car's most important safety system. Brakes are a normal wear item for any car, and brake linings, drums and rotors, as well as brake fluid, should be checked at each oil change.

To help ensure the performance and safety of wipers, blades should be replaced every six months or when cracked, cut, torn, streaking or chattering. Windshield wiper fluid should be checked monthly and only washer fluid should be used.

—Be Car Care Aware Canada

EXPENSIVE INSURANCE SHOULD MEAN BETTER COVERAGE. TOO BAD IT DOESN'T.

Why pay more for something when you don't have to? You can save hundreds (even thousands) by shopping around for auto insurance. All without affecting your coverage. We've harnessed the search power of the internet to offer you choice. It's fast, FREE and easy to use, with absolutely no obligation. And when your current provider cries about it, you can tell them "too bad."

InsuranceHotline.com
"We search. You save."

FALL & WINTER MAINTENANCE

- Tires (rotation and check air pressure at minimum.)
- Brakes (pulsations, grabbing, noises, or longer stopping distances.)
- Heater and defrosters.
- Oil and filter change.
- Under car oiling / Full car oiling.
- Coolant system flush and refill.
- Inspect lights and bulbs.
- Replace worn wiper blades.
- Cleaning battery connections.
- Drive belts, clamps, and hoses.

Before experiencing the cold weather it is best for your vehicle to have any engine performance issues resolved such as: hard starts, stalling, and/or diminished power.

- Fuel economy - A Motovac is a great service that cleans the injectors, valves and the fuel system which can improve your fuel mileage up to 20%.
- Cold starts - AVR test can verify that your battery, alternator and starter are in strong working order.

We wish everyone all the best in 2012 and safe driving throughout this upcoming winter season!!!
