### NOTICE OF PUBLIC INFORMATION CENTRE

#### Biosolids Master Plan Class Environmental Assessment Study

##### The Study

Halton Region has initiated a comprehensive Master Plan for the management of biosolids generated at the Region's seven wastewater treatment plants. Biosolids are a nutrient-rich, organic by-product of the wastewater treatment process, which is currently provided to the Halton agricultural community for beneficial use in crop production. In 1999, a Biosolids Management Strategy was undertaken which recommended program diversification and flexibility to enhance the biosolids program. Since that time there have been changes in the regulation of biosolids management, as well as new developments in biosolids management methods. It is therefore an appropriate time for Halton Region to undertake a Master Planning Process to ensure the long term sustainability of its Biosolids Management Program.

The purpose of this study is to evaluate biosolids management alternatives and methods, and to recommend a strategy that ensures the program's long term sustainability to the year 2031.

##### The Process

The study is being conducted in accordance with the requirements for Master Plans under the Municipal Class Environmental Assessment (Class EA) (Municipal Engineers Association, October 2000 as amended in 2007 and 2011). The Class EA process includes public and review agency consultation.

As such, two drop-in format Public Information Centres (PICs) have been planned to obtain input on the work completed to date, including the results of the evaluation of biosolids management alternatives and methods, and the identification of a Preferred Biosolids Management Strategy for Halton Region. The PICs are scheduled for:

Directions for each meeting location are posted on the website at [www.halton.ca/biosolids](http://www.halton.ca/biosolids).

Representatives from Halton Region and its consulting team will be present at the PICs to answer questions and discuss the findings and next steps for the study.

You are encouraged to attend one of the PICs and provide your comments so that they may be included in the study. Comments received will be considered in finalizing the evaluation of the biosolids management alternatives and methods, and in confirming the Preferred Biosolids Management Strategy for Halton Region. Comments and information regarding this project are also being collected to assist in meeting the requirements of the Class EA process. With the exception of personal information, all comments will become part of the public record.

Information updates on the Biosolids Master Plan are also posted on Halton Region's web site at: [www.halton.ca/biosolids](http://www.halton.ca/biosolids).

Please contact either of the following project team members if you have any questions or comments, wish to obtain more information on the study, or if you would like to be added to the mailing list to receive future notifications for the study:

### Jeff's Home: a virtual exhibition of the Escarpment in Halton

The Halton Region Museum has launched a new online exhibit featuring Halton's natural heritage along the Niagara Escarpment. Called Jeff's Home, the exhibit was made possible with support from the Ministry of Tourism and Culture and was developed with the help of many community partners, including heritage and education groups. Named after the Jefferson Salamander, the site

provides an accessible way for people of all ages to take a virtual hike, learn facts, play games and find great Escarpment teaching resources. The Escarpment adds to the high quality of life we enjoy in Halton Region. Learn more about this local treasure and how we can work together to protect it for future generations at <http://jeffshome.halton.ca>.
