

"Imagine this..."

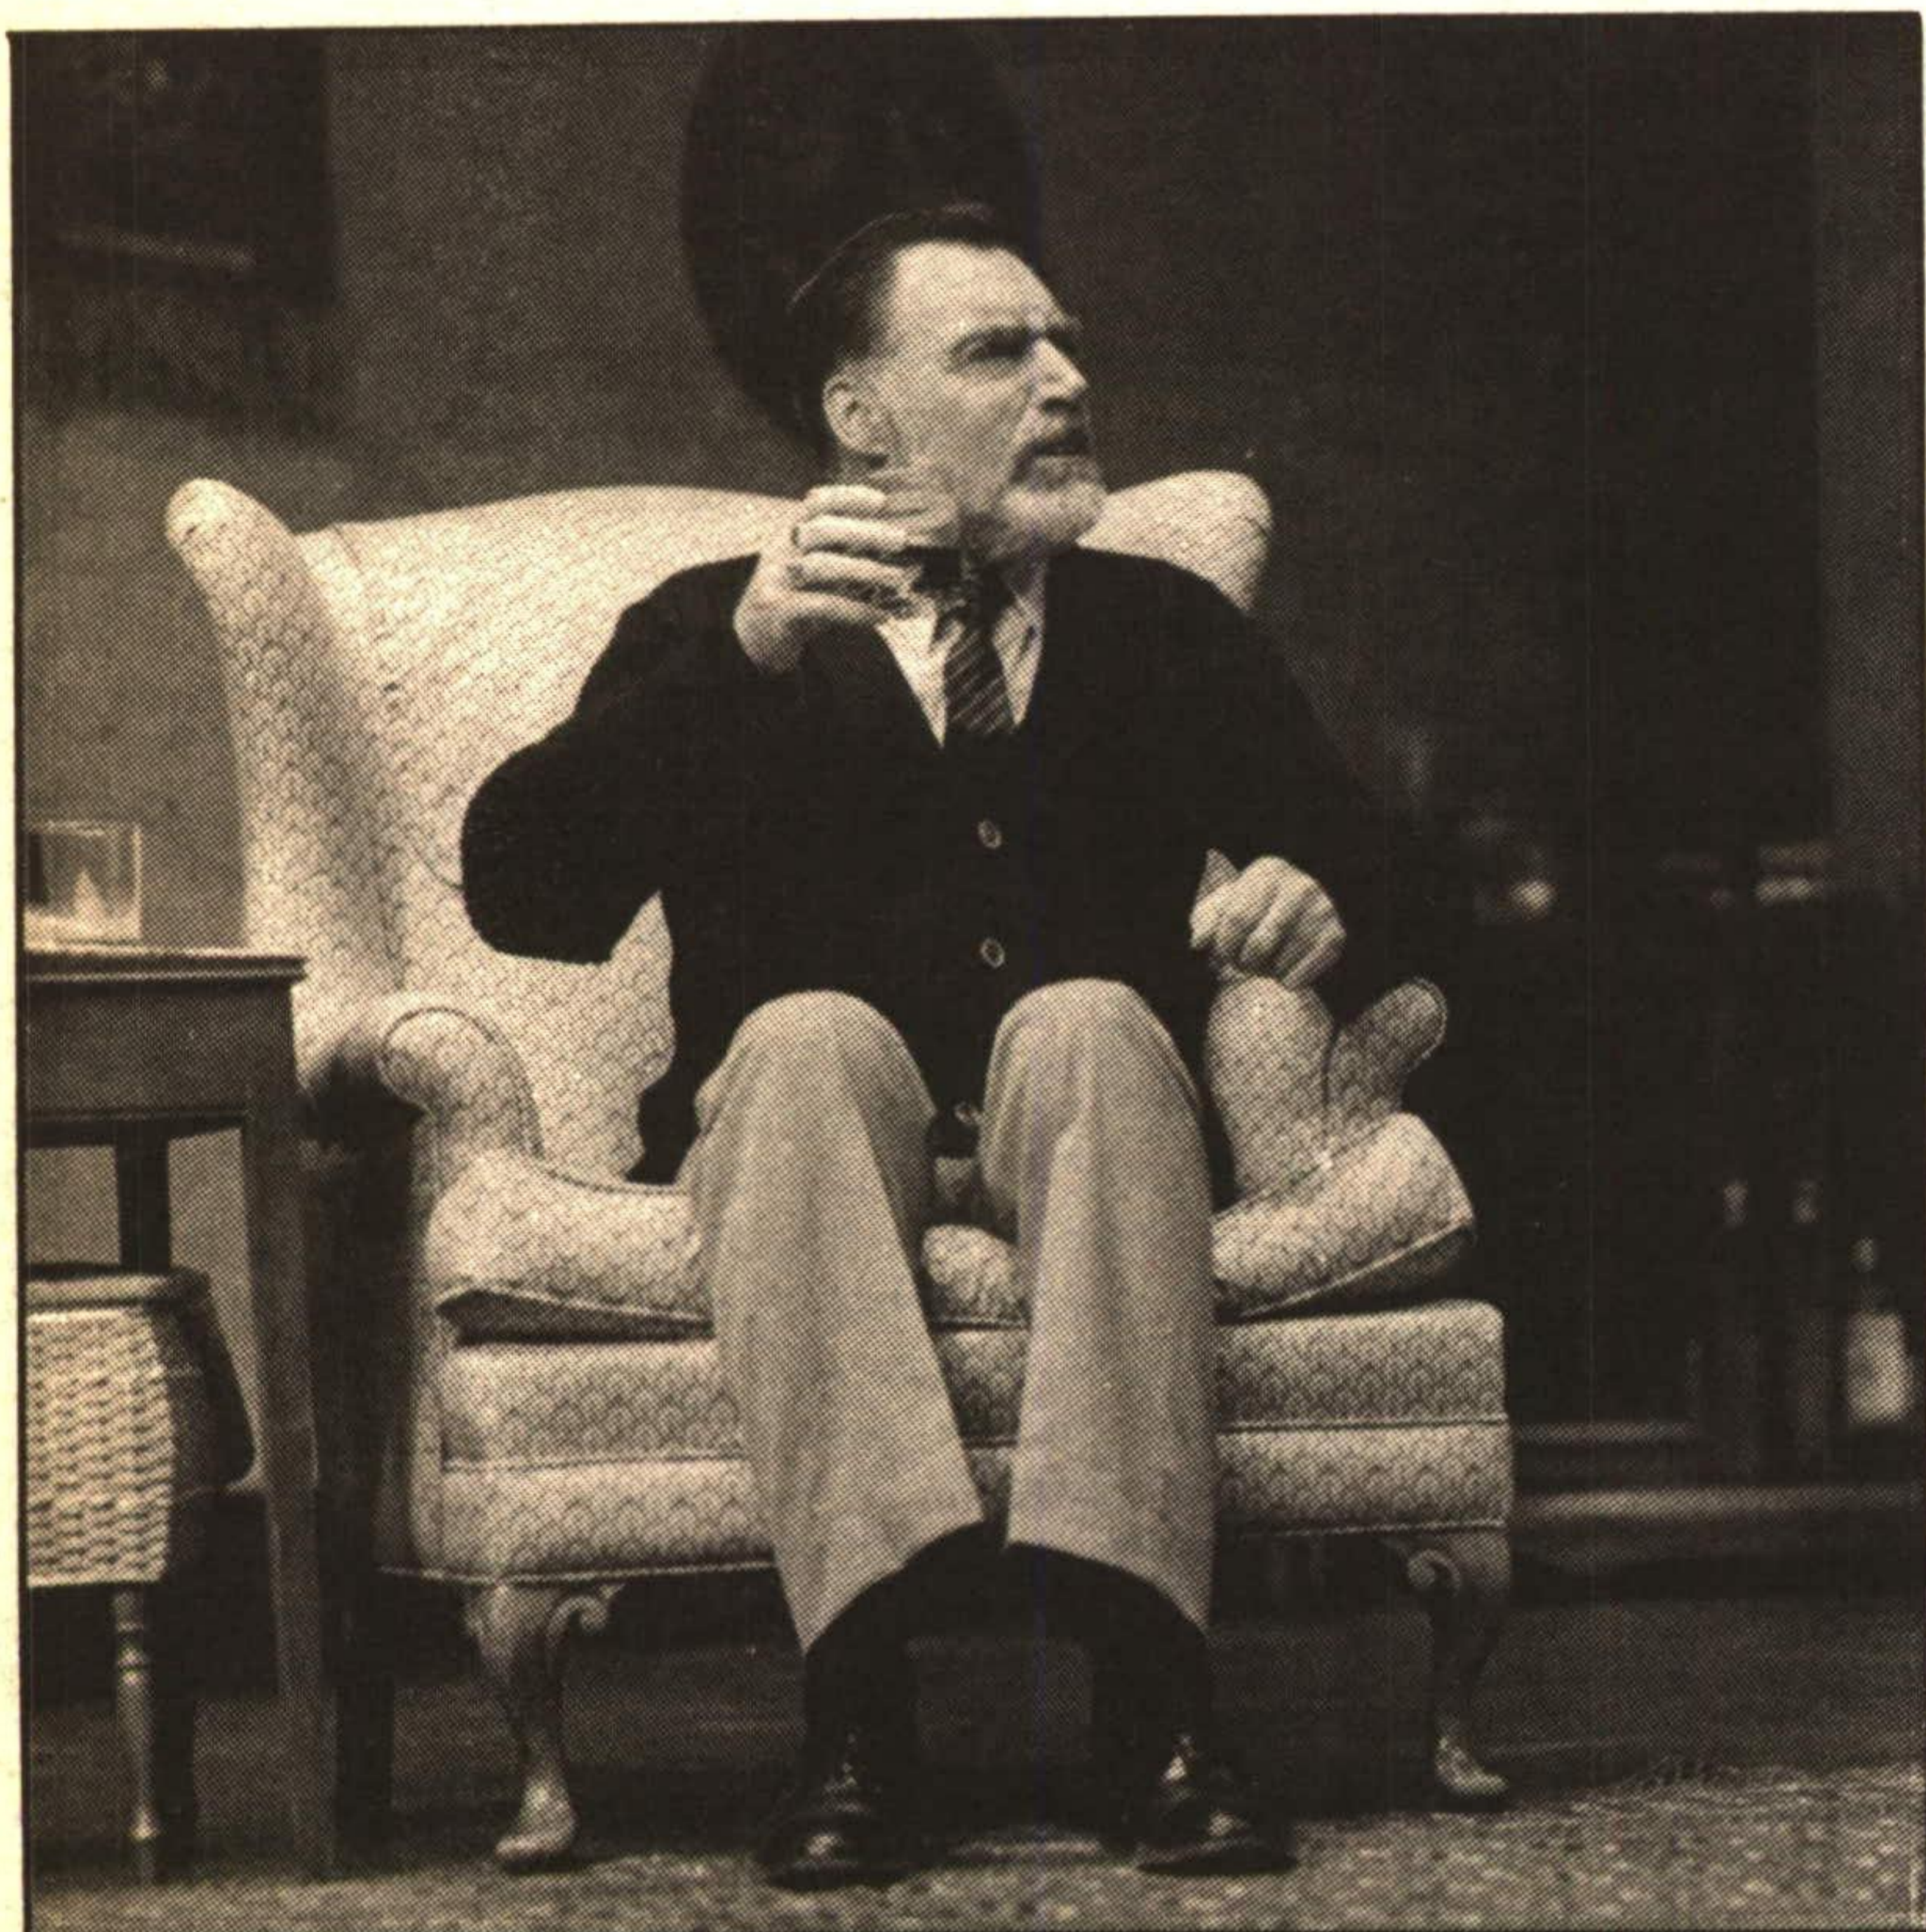

PHOTOS BY TED BROWN

Arthur Putman, (Ron Hill) takes aim with his service revolver as he checks out the weapon, fearing someone is trying to kill him in GLT's "An Act of the Imagination" now playing at the JET.

Simon (Alan Caples) finds the company of his father's assistant editor, Holly Adams, (Roseanne Pattison) very charming as she works at the Putman residence on Arthur's newest book.

Detective Sergeant Fred Burchitt (Frank McKie) enjoys a short shot of scotch during his visit to the Putman residence, as he indulges in his passion for mystery.

A very irritated Putman shakes Brenda Simmons (Jacky Willows) with rage after she attempts to blackmail him after having an affair.

The Royal Canadian Legion IMPORTANT NOTICE

To all citizens of Halton Hills:
Please be advised that the Royal Canadian Legion does not have any connection with any publication soliciting advertising copy, and or, donations purporting to benefit Canadian veterans. Nor does it endorse any such publications. The Annual Poppy Campaign is the only Legion Appeal to the public on behalf of veterans.

DENTAL MATERIALS

Charles Goodyear invented a denture base material back in the mid 1800s. This material was called "vulcanite." Vulcanite is a dark brown, semi-rigid rubber. Since then, denture base materials have come a long way, and vast changes and improvements have been made. Today very modern plastics and acrylics are used.

The artificial teeth on a denture were made from such materials as bone and ivory. Precious metals such as gold and silver were also tried. Even wood was used to make teeth!

Finally, porcelain and plastic teeth have replaced the former materials. We've come a long way since the days of "wooden teeth." Denture technology has been vastly improved for denture wearers, and they are continually discovering new techniques and materials.

Today, more than 5 million Canadian adults are wearing dentures. That's more than one out of every four people in Canada.

GREEN THUMB GARDENING

THE SECRET LIFE OF HENS & CHICKENS

The botanical name Sempervivum simply means "to live forever". This perfectly describes these amazing little plants, which are more commonly known as Hens & Chicks. They may appear soft and fleshy but they are actually tough and enduring. However, they do not grow in an aggressive or invasive manner.

They are small plants with pointed, succulent leaves that are arranged in a rosette-like form. The mature or adult plant produces small, "baby" plants around its outside edge. These quickly grow up to produce babies of their own. Eventually, an attractive thick clump of these plants form. During mid to late summer some of the more mature plants stretch out into a clump of daisy-shaped flowers. After the pink flowers fade the entire adult plant shrivels up and dies. But, by this time it is surrounded by its offspring which quickly enlarges to fill the gap left by its death.

Hens and Chicks are hardy, perennial plants that are extremely easy to grow. They thrive in hot, dry areas, and can even tolerate quite a bit of neglect. Since they have a sparse, shallow root system they can be planted in small grooves or depressions in rockery stones.

Each week Christine Cole of Tuitman's Garden Centre and Landscaping, Highway 25, 1 mile south of Acton, 853-2480, will be presenting helpful tips and information to assist you in creating your garden showplace!
