Stages of an environmental revolution

Environmentalism is revolutionary. Looking at historic battles to save our earth our past has shown us that environmental ethics slowly gained rights just as American colonists were granted independence, blacks gained civil rights, and women won the right to vote. Each had its own revolution.

John Stuart Mill once stated that "every great movement must experience three stages: ridicule, discussion, adoption (resolution)." During that revolt the unthinkable becomes conventional.

Last week, while lecturing on the history of the environmental movement to geology students at Sir Sandford Fleming College in Lindsay, I asked what stage they thought our present day "revolution" was at. Here's what they had to say:

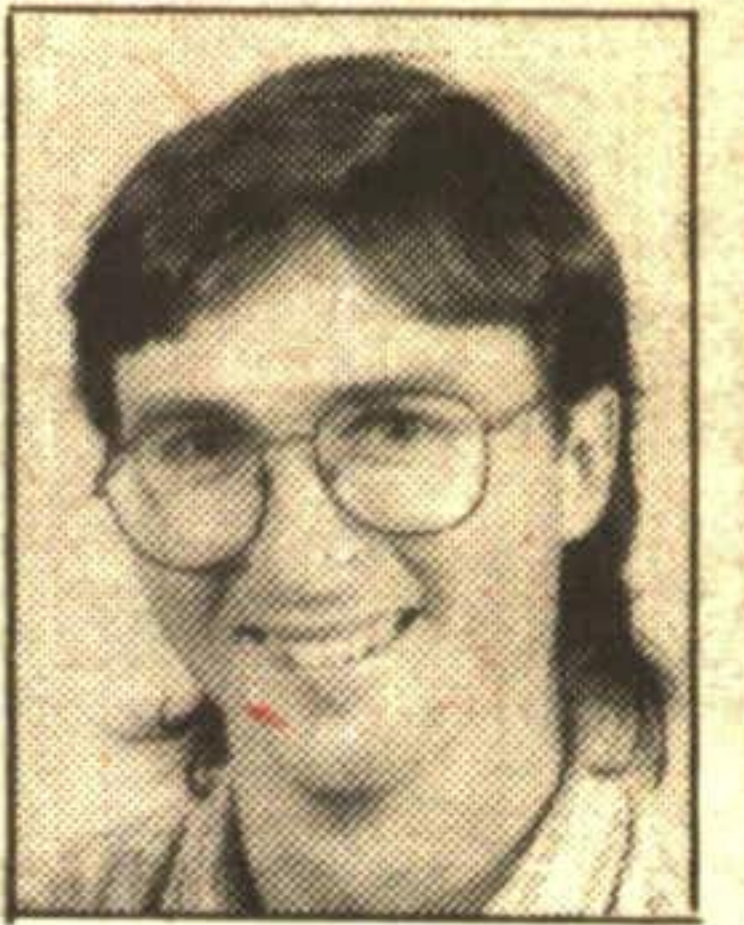

"I'm 23 and considered a twenty nothing. Asking me where I think the populace of the earth stands on global issues (ridicule, discussion, resolution) is sort of beyond my comprehension. We (my generation) were brought up by the hippies, who turned into yuppies, who are all new age gurus now. How stable can this generation be when the baby boomers (our immediate influences) are still in a stage of chaos?"

Tracy Cuning "Into today's world the idea of being environmentally aware is still a growing idea. I find that we are not just in a single stage of just ridicule, discussion, or resolution, but in all three stages that keep repeating themselves."

Charles Albert "We have been discussing and re-discussing the issues of our environmental plundering. It's time to put some of this discussion into resolution. Change

Nature's Way

By KEVIN CALLAN

must be issued from the top of the pyramid, but governments are inherently slow to change. With this the burden falls upon the bottom of the pyramid, the working society to bring about changes. It's time to really push for legislation against unlawful usage of our environment."

Jason Laplante

"Recycling, reducing, re-using green products and the production of non-lead gas are just a few things that communities have demanded in the past. These products and systems are all environmentally friendly. And there are also at least a million more products and systems out there. The demand and creation of these products makes me truly believe that our world is on the edge of the resolution era."

Carmen Dubeau

"Discussion, and plenty of it, is an ongoing process when it comes to environmental issues. In most cases the driving force behind the discussion (arguing) will be the all-mighty dollar."

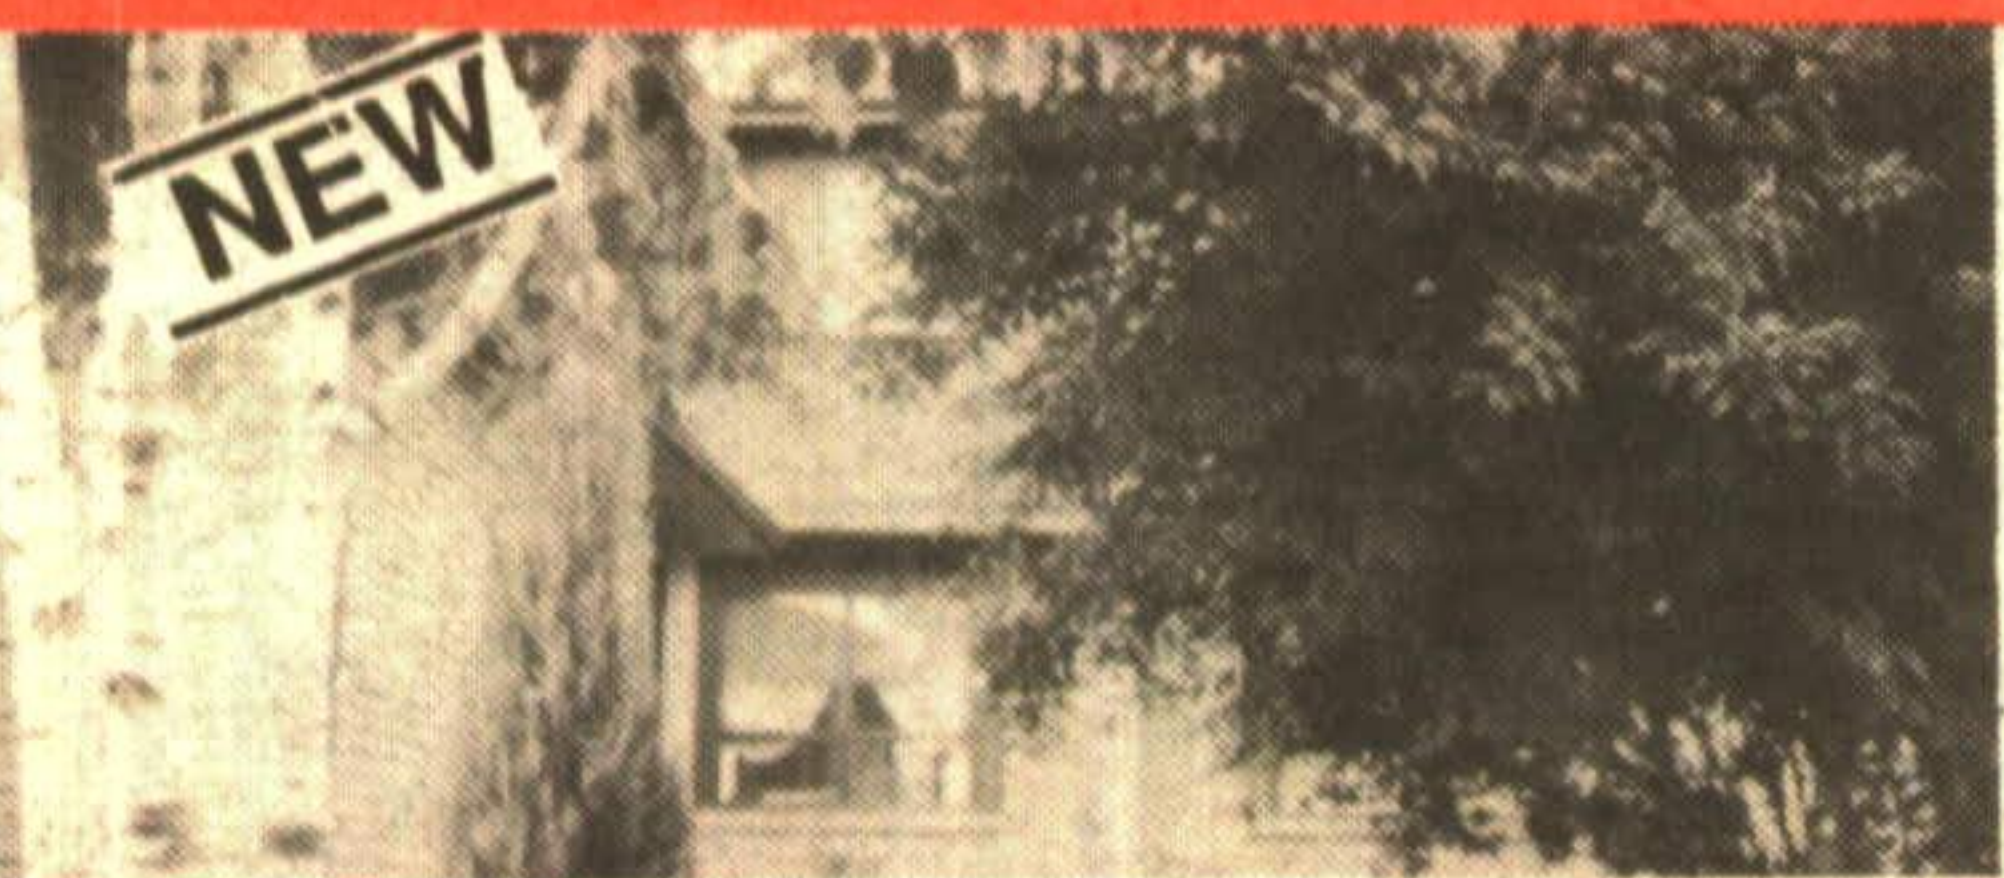

Wayne Giles "It's obvious that our future conservationists differ in their views of what stage our environmental revolution is at. However, not one student disagreed to the fact that a revolt was in process. What stage do you think we are at?"
