PREPARING YOUR LAWN FOR WINTER

Listed below are a few suggestions on winterizing your lawn.

1. Aerating and fertilizing in September or October will make your lawn healthier, helping it to resist winter damage.
2. Once the leaves have fallen give your lawn a thorough raking to keep the leaves from smothering the grass.
3. Be sure to rake out all of the leaves & debris from under the shrub beds & trees (lawn insects & rodents love to hibernate here for the winter).
4. Once the grass has stopped growing give your lawn one final cutting (late Oct. or early Nov.) just to trim it up and keep it neat and clean for the winter (DO NOT CUT LESS THAN 2").
5. Clean your lawn mower of all grass and oil. Place a couple of drops of oil in the cylinder head and pull cord lightly twice. Replace spark plug and store mower in a safe place.
6. Extras - remove and till flower and vegetable gardens. Add peat moss, compost or manure as required.

Now your lawn is ready for winter.
