## NOTICE OF COMPLETION CLASS ENVIRONMENTAL ASSESSMENT

The Regional Municipality of Halton has recently completed the Class Environmental Assessment for Additional Waste Water Trunk Capacity to Serve Planned Development in Halton Hills (Georgetown). This project was completed under the Class Environmental Assessment for Municipal Sewage and Water Projects.

This study identified that additional waste water trunk capacity is required to serve the planned Georgetown community of 40,000 people. Alternative concepts for trunk sewer locations were evaluated. The Preferred Alternative Concept provides a gravity wastewater trunk sewer from Georgetown West through the North Halton Golf Course and the Black Creek valley, terminating at a pumping station at Main Street and Black Creek. Flows entering this station would be pumped via a forcemain on Main Street followed by a gravity line through future subdivision development in Georgetown South to the existing wastewater trunk sewer.

The Environmental Study Report (ESR) documenting this Class EA is now available for review. Copies of this document have been placed in the Town of Halton Hills Clerk's Office (1 Halton Hills Drive) and the Halton Hills Public Library (9 Church Street) for your convenience.

There is a 30 day review period for this ESR beginning September 7, 1993 and ending October 6, 1993. Your comments should be forwarded in writing on or before October 6.

If concerns arise regarding this study which can not be resolved in discussion with the Region, a person/party may request that the Minister of the Environment and Energy "bump-up" the project to an individual environmental assessment. This request must be received by the Minister before the end of the 30 day review period.

Subject to comments received during this review period the Region intends to proceed with design and construction of the new trunk sewer.

Your comments on this report are appreciated.
