NEW BREAKTHROUGH FOR LOWER DENTURES

Does your lower denture move from side to side? Do you have difficulty in speaking? Or, in eating even the softest foods? Does your denture fly out of your mouth when you cough or sneeze? Do you have a flat lower ridge? If you answered YES to any of these questions, we could have the answer for you. Now, we can make those dentures fit firmly for virtually every lower denture wearer!

With the new MYOLOC™ SYSTEM. The product of over five years of extensive research, the Myoloc System consists of varying sizes of specially designed "Wings". Once attached to your denture, these Wings give you the stability you've been hoping for. And, it's completely invisible in the mouth.

It can be installed on your existing denture in the same length of time as a simple repair. With Myoloc, you won't experience any disruption of normal business or social activities.

Patients across the country are already wearing dentures with Myoloc Wings attached. They report greatly increased comfort when compared with dentures without the Myoloc System.

Myoloc has been designed to be affordable. In fact the cost is about the same as a standard denture relining.
