Tooth Chatter

by ALEX TRENTON DENTURIST

"DENTURE TIDBITS"

* If you should experience difficulty keeping your lower denture in proper position when talking or eating, it may be the result of troublesome tongue habits. The tongue should touch the inner surface of the lower denture and not be pulled away from it when talking or eating.

* Please do not experiment with your denture. Never try repair, relin or adjust the denture yourself. These "do-it-yourself" jobs can be very destructive to the tissue and bone ridge on which the denture rests. Only a dental professional is qualified to refit your denture properly.

* The assumption that dentures will last a lifetime is incorrect, because though the denture will not change, the tissue will. This inevitable tissue change will result in an ill-fitting, uncomfortable denture. Relines, duplications or a new denture will be necessary to correct this problem.

* If you have any questions or concerns regarding your denture or partial, give our office a call.

You do not need a referral; simply call our office direct.

... Lend Me Your Ears

By Cory Soal R.H.A.D.

Noise does not have to be loud to be harmful. It could take as little as 60 decibels - the level of a quiet air conditioner to prod us from deep to superficial sleep without our knowing it, interrupting vital REM cycles and leaving us to face the day fatigued and unfocused. Sleep deprivation from various noisy sources has been blamed for thousands of highway and industrial accidents each year.

The hearing clinic specializes in noise attenuating ear plugs! For more information, please call.....
