Golf for the Cure in Georgetown raises more than \$5,600

A foursome of golfers from The Club at North Halton recently turned over the funds raised during a golf marathon in early July to the charities they chose to support.

Golf for the Cure consisted of Debbie Campbell, Donna Lambert, Lori Madill and Charline Morris playing 144 holes of golf in one day and they were able to complete the feat in approxi-

mately 15-and-a-half hours, with each surpassing the goal of raising \$1,000 for each charity.

In total, \$5,616 was generated on the day, with the ALS Society of Canada (Campbell), CAMH Foundation (Madill), Women's Cancers (Lambert) and the Heart & Stroke Foundation (Morris) receiving a little more than \$1,400 apiece.

A Georgetown Landmark Reinvented: Locals Embrace the McGibbon's Redesign

If you grew up or spent any significant amount of time in Georgetown, there's a good chance that you met a friend at least once for a drink at the iconic McGibbon Hotel. Though a little rough around the edges today, the downtown landmark has gone through multiple reinventions since the 19th century.

And so it's great to see that the design vision for the new Residences of the Hotel McGibbon honours the special place Gibbys has in our community. A skillful blend of contemporary architecture and historical preservation, this highly anticipated project is easily Georgetown's most exciting, new mixed-use development.

In keeping with the town's strategic vision to preserve, protect and promote our history and environment, the new Hotel McGibbon represents a remarkable exercise in sustainable development, making it the first-of-its-kind in the area.

What you may not know about the McGibbon redesign is how green it is. In keeping with the town's strategic vision to preserve, protect and promote our history and environment, the new Hotel McGibbon represents a remarkable exercise in sustainable development, making it the first-of-its-kind in the area.

Features such as geothermal heating and cooling, full-spectrum LED lighting, low VOC paints, individually metered residences, electric car stations plus numerous

other energy and water-efficient elements all come together brilliantly at the new McGibbon. In fact, its new residents will probably live in what turns out to be the most energy-efficient building in Halton.

While lower utility bills and living ethically certainly have their appeal, the design's cascading terraces and upscale interiors drenched in natural light have turned most homebuyers' heads. Future residents report that they love the idea of living in brightly lit homes with views and terraces that connect them to nature and absorb them with a sense of calm and well-being.

So, who are these future residents? Whom moving in to the new McGibbon's stunning suites? Thus far: locals. The development team (SilverCreek—a homegrown company) reports that 96% of the brisk sales to date have come from current Georgetown residents. Their/our enthusiastic response speaks to the built-up demand for high-end condos in our community.

Whether we get to live in the new McGibbon or not, we can all feel better knowing that a beloved local landmark is getting a new lease on life—and that it will set an incredible new standard for environmental development in Halton. Let's just hope that other investments in our community measure up.
