. . . Lend MeYour Ears

By Cory Soal R.H.A.D.

WHAT SHOULD YOU EXPECT FROM HEARING **INSTRUMENTS!** PART 2

' Understanding speech is a brain function and although the hearing instruments will give your brain the tools it needs to understand speech, it takes training and patience to improve your ability to understand.

Different listening situations will offer different abilities to understanding. Noisy situations are harder to hear conversation even for normal hearing individuals; hearing instruments should improve your ability, but will not allow you to perform as a normal hearing

* Many sounds that you hear will sound different, or more distinct, to you. This is because your diminished hearing over a long period of time has trained your brain to accept the slight differences in the sounds you normally hear. Wearing hearing instruments will bring back the original sounds as they should be heard, although different to you. With time your brain will accept the new changes to these sounds.

Hearing instruments should allow you to understand speech better in most situations than without your hearing instruments.
