

Tell the government where to go with its plan

The federal government is asking for input from Canadians as it begins the second phase of a three-part consultation on open government.

This phase of the consultation will be open until the end of June.

The 2014 Open Government consultations are expected to run until the fall in three phases.

According to the Treasury Board of Canada Secretariat, the objective of the first phase of the consultation, which remains ongoing and accessible online at data.gc.ca, is to determine how Canadians can best be engaged and informed about open government.

The second phase is to gather ideas from Canadians about activities that could be in Canada's Action Plan on Open Government 2.0.

Canadians will be able to pose questions and make suggestions online and at in-person consultations, according to the federal government.

In the final phase, Canadians will be asked for further input to "refine and strengthen" proposals for the action plan.

Ottawa promised a report on the findings from all three phases would be published later this year and summaries of ideas and comments submitted posted at regular intervals.

Canada's Open Government initiatives are supposed to provide Canadians with more opportunities to learn about government and participate in the democratic process.

Canada joined the international Open Government Partnership in 2012, and subsequently released Canada's Action Plan on Open Government.

The Action Plan is a comprehensive strategy with 12 commitments for advancing open government through open data, open information and open dialogue.

METER TECHNICIAN

Halton Hills Hydro is looking to fill the position of Meter Technician, in our Metering Department. Interested candidates may apply, in confidence, to express their interest in the position, outlining their education, experience and related qualifications. The successful candidate will have the following qualifications:

- A graduate of a Community College program in electrical technology (Power or Control) and registered as a certified engineering technologist or technician; with field experience with electrical background up to 750V;
- Demonstrated commitment to safety in the workplace;
- Demonstrated mechanical aptitude, analytical and trouble shooting skills;
- Customer service oriented with strong interpersonal skills;
- Concise written and verbal communication skills;
- Valid Class G Ontario Driver's License;
- Proven ability to work effectively and safely in a team environment;
- Ability to perform essential duties of the position including the physical demands required which could be lifting in excess of 50 lbs., working in extreme weather conditions and working in an aerial device;
- Proficient in the use of a computer and related software applications, (ie) Microsoft Word, Excel, MV-90.
- Demonstrated company values, in particular, respect in the workplace.

This is a union position (40 hours per week) and compensation will be negotiated in accordance with the current Collective Agreement.

The successful applicant should have completed all levels of the MEARIE Meter Technician Training program. Apprentices for this position will be considered should there be no applicants that meet the qualifications listed.

Duties of the meter technician will include maintaining the infrastructure, (electronic interval meters, related communications equipment and network management systems), as well as the following:

- Installation and maintenance of single phase and polyphase meters and metering systems;
- Programming of electronic meters and testing of meters to ensure their accuracy;
- Setup and support of interval data collection systems (currently MV90);
- Maintenance, installation, operation and troubleshooting of Metering Systems; and
- Other duties as required.

Please forward your detailed resume, in confidence, by Friday May 30th, 2014 to:

hr@haltonhillshydro.com

We thank all applicants for their interest however only those selected for an interview will be contacted.
